Chicago, Illinois

**AT
THE
TOP**

Reliable Incubators

have maintained their place "at the top" ever since they were first placed on the market. This is proved by the fact that they have never suffered on single defeat in any exhibit during this time. They are farther in the lead today than ever. Why? Because improvement has kept them more than abreast of the times. The same is true of

Reliable Brooders

"The nearest to nature kind"—that's why they are the successful kind. When you put money and confidence into Reliable machines you can bank on good results. It is the results they bring that have made them win both prizes and preference—their practical merit. Write for our catalogue (enclosing 10c to pay postage). It's full of common sense reasons. Better get posted before you make costly mistakes.

Reliable Incubator and Brooder Co.

Box A-1, Quincy, Ill.

A great opportunity to secure A 1 White Plymouth Rocks, is offered by Mrs. J. H. Orbaugh, Batavia, Ohio, prop. of the Phoenix Poultry Yards. Show birds selected with great care. A share of your patronage solicited. Circular free.

Box B, No. Adams, Mich.

BAILEY'S Brown Leghorns Barred Ply. Rocks.

Salmon breasts, light, soft, brown backs predominate in our flock of Leghorns this season. Morris females our specialty.

J. A. BAILEY, - - 738 14th St., Denver, Col.

ST. LOUIS WORLD'S FAIR WINNERS

2000 WYANDOTTES and SEBRIGHTS 2000

We have 2000 head of the finest birds to offer to the trade that we have ever offered, in WHITE, GOLDEN and SILVER LACED WYANDOTTES, GOLDEN and SILVER SEBRIGHTS and BELGIAN HARES. Our youngsters are ready to ship, and we have 200 grand cock birds and 400 fine hens out of our breeding pens, and 200 immensely fine SEBRIGHTS, all bred from our New York, Pan-American, Chicago, Cleveland and State show winners. This is the grandest collection we ever placed on the market in our 30 years' offerings. Good breeding birds \$2 to \$4 each, show birds of the finest quality at \$5 each up according to quality. Our large circular of America's largest WYANDOTTE FARM tells all about our birds and the 1000 premiums they have won at the greatest shows of the Nation. Write your wants to

PRIZE WINNERS FOR SALE

Birds fit to win at any show. Write us your wants. Fine yearling hens and cocks, our last season's breeders, a low price; strong vigorous, healthy birds; heavy layers. Send for catalogue. R. I. Red Standard, FREE

EGGS \$1.00 per sitting;
\$6.00 per 100.

PRIZE STOCK \$2.00 per sitting;
\$10.00 per 100

THE BEST BUFF ROCKS

To Be Found Anywhere. At the World's Fair I had 46 Buff Rocks on Exhibition, All Owned and Bred by Me, and I Won my Share of the Prizes.

Fanciers were astonished at the even color and fine shapes of these birds and could hardly realize that these 46, with 200 to 300 others equally as good, could be found in the yards of one breeder. Yet this is true, and they are for sale at reasonable prices. Write, describing your wants. EGGS, \$4 per 15; \$7 per 30; \$10 per 45 and \$20 per 100. I can suit you. Quality the best; prices the lowest.

B. E. Johnson,

Kirkwood, Mo.

WHITE WYANDOTTES

Winners at St. Louis Universal Exposition, October, 1904.

CLEMENT & FIKE'S

great Bridgewater Strain, in competition against the world, show their superiority by winning

1st and 7th Cock, 4th Pen, 3d Display and Five Specials

and the great coveted prize, the \$50 Silver Cup, on 1st cock. We are producing the better White Wyandottes and the world is making a beaten path to our door for foundation stock, which produces the prize winners the world over. Not until we produced the better and the high quality bird were we able to arrest the attention of the world to our doors. Show birds for sale fit to win anywhere. Thousands of first-class breeders that will start you right. Send for handsome 20-page, illustrated catalogue, free.

SHOEMAKER'S BOOK ON POULTRY

AND ALMANAC FOR 1905.

There is nothing in the world like it. It contains 224 large pages, handsomely illustrated. A number of most beautiful Colored Plates of Fowls, true to life. It tells all about all kinds of **Thoroughbred Fowls**, with life-like illustrations, and prices of same. It tells how to raise poultry successfully and how to treat all diseases common among them. It gives working plans and illustrations of convenient Poultry Houses. It tells all about

Incubators and Brooders.

It gives full instructions for operating all kinds of Incubators. This chapter is marvelously complete and worth dollars to anyone using an incubator. It gives descriptions and prices of Incubators, Brooders and all kinds of Poultry Supplies. In fact, it is an encyclopedia of chickendom and will be mailed to anyone on receipt of only 15 cents. Your money returned if not pleased.
C. C. SHOEMAKER, Box 764, FREEPORT, ILL.

EGGS-KUM

Makes the eggs come, starts pullets laying, makes males more vigorous and eggs more fertile. Octuple strength. Most highly concentrated poultry powder in the world, therefore cheapest. Teaspoonful in mash to forty hens.
Price 25c., by mail 31c.

ROUPINO

Roupino is the best Roup and Canker cure extant. Put in drinking water. No Cure, No Pay. Price 50c. postpaid.
HEN-TONE is a scientific substitute for Douglas Mixture. Keeps all feathered stock in health. One box makes hundreds of gallons of the best poultry tonic. Price 25c., by mail 30c.

Write for circulars of these three remedies.

RELIABLE REMEDY CO., Mfrs.,

Pres. Houdan Club, Drawer 12, Franklin, Maine

STANDARD POULTRY ACCOUNT BOOK

By Henry L. Breckman

Chicago Ill.

Price 50 Cents

STANDARD POULTRY ACCOUNT BOOK

IS DEDICATED TO BUSY POULTRYMEN THROUGHOUT THE COUNTRY and is designed especially to make easy and enjoyable the correct keeping of accounts by the day, month and year of all expenses and income pertaining to the Poultry business.

The STANDARD POULTRY ACCOUNT BOOK is the best and most practical account book ever devised for the poultry man. This book has been arranged with a view of obtaining thorough satisfaction with the least possible labor. It is just exactly what poultrymen want.

The system is so simple a child might have entire charge of the book and keep the accounts correctly, and yet, it is so complete as to enable the user to know just what money has been expended and for what purpose; the monies received and from what source, and cash balance on hand and in bank.

It analyzes your expenditures and receipts in a way as complete and thorough as would be required by a large business house. Requires no more time than any ordinary cash account.

The book is arranged to contain the complete records of expenditures and receipts for 12 months (beginning with any month) with Recapitulation, Inventory and Balance Sheets to close up the year's business.

Contains 32 pages, 7 1/2 x 10 inches, neatly printed in blank form on best quality linen ledger paper, regular blank book ruling, and is bound in a neat, durable binding.

Send for a copy of this valuable book and begin to keep your accounts in a systematic, orderly manner—the correct way. Whether you keep poultry for pleasure or for profit this book will help you to conduct your business on a more intelligent basis. You'll be pleased with it. Price 50 cents, postage prepaid.

The above book and AMERICAN POULTRY JOURNAL one year, both for 75 cents.

STILL IN THE LEAD

Two Highest Awards AT St. Louis World's Fair

Mann's Latest Model Bone Cutter

Why is it so? Why is it that more Mann's are sold—all over the world—than of all other makes combined? Is it not reasonable to suppose that the explanation lies in the fact that Mann's gives satisfaction? It is a fact that where others only claim, Mann's performs; where others only promise Mann's fulfills; what others try to do Mann's does. To let you prove these facts we will send you a Mann's for

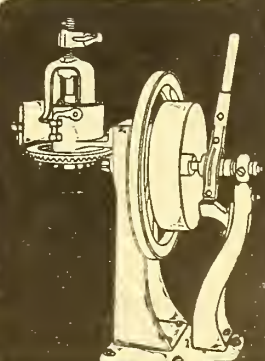

Ten Days Free Trial

on your own premises—no money until you are satisfied that Mann's cuts all kinds of bone with the adhering meat and gristle, easier, faster and in better shape than any other bone cutter can. Note its late improvements, its automatic self regulating feed, open cylinder, its special cutting device, and decide for yourself. It has more late improvements than all other makes combined. Get our catalogue free and read our broad guarantee and trial offer.

G. A. STROHM,

R. F. D. 4, Elkhorn, Wis.

The Racine**Incubator**

is the simple, sure, dependable kind. Used by thousands of successful poultry men and women.

Automatic heat regulator; 14 oz. copper tank and boiler; white pine case, double walled; self-ventilated; nursery; no moisture. Built by a man who devoted 23 years to the problem—who knows most about incubators. It can be operated by anyone, anywhere. There lies the great value of the Racine.

If you seek an incubator or brooder and wish to know about all kinds, please send for our remarkable **Book About Incubators**—written by the man who made the Racine. It is a complete education on incubators. It tells facts that you need to know before buying—facts you would not think of. It tells, too, how to make poultry pay—23 years experience. Don't buy without reading it. The book is free. Write today for it. Address

Racine Hatcher Co., Box 26, Racine, Wis.

We have Warehouses at Buffalo, Kansas City, and St. Paul.

**We Pay
The Freight**

IT IS TO TRUST

Not made to fool people. I am in touch with a good many thousand poultry raisers and know their troubles. I tried to make this incubator to help chicken raisers out of trouble. I didn't go about it blind. I had some experience. I had made 50,000 machines before I perfected

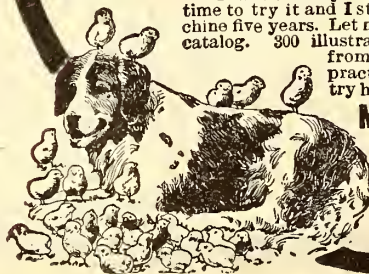

Old Trusty Incubators.

That helped. I built Old Trusty on the right principle. Put right materials in it, redwood and cold rolled copper. Gave it the best safety lamp, automatic regulator and my own patent, copper, hot-water pipe heating system. I had high expectations. Old Trusty reached them. Its results amazed old poultry raisers. Old Trusty went into the first rank the first year.

40 Days Free Trial. 5 Years Guarantee.

That's the way I sell. You get ample time to try it and I stand behind the machine five years. Let me send you my **Free** catalog. 300 illustrations, photographs from all over the country, practical plans for poultry houses, yards, etc.

GOLDEN NUGGET POULTRY FARM,
F. E. GILLILAND, Prop., Box R, Hope, Ind.

BIG SUCCESS WITH HOGS.

SOME farmers are more successful with hogs than
others. The man that only gets 3 lbs of pork out of
a bushel of corn fed to hogs makes only half as much
as the man that gets 17 lbs.

The American Swineherd is a specialist and
the best authority on the hog industry.

Prof. Henry says that success is only obtained by
concentrating all efforts upon one line.

A two-years' course in Hog Raising:
Teaching how to be successful

How to secure the greatest profits.
How to get 17 lbs. of pork out of a bushel of corn and
19 lbs. from a bushel of wheat fed hogs.

How to feed to double the growth and gain over usual
methods; only healthy hogs profitable.

How to keep your hogs healthy.

How to utilize, without other expense than the sub-
scription to this paper, the costly experience and gath-
ered wisdom of the most capable and successful feeders.

Prof. Kennedy of the Iowa Agricultural College says
"Your paper is a leader in its line on feeding."

Every owner of hogs should take advantage of this
special offer:

Send us \$1 for two years' subscription to the Amer-
ican Swineherd and it will entitle you to a free

copy of the Hand Book on "Hog Hygiene," with trade
secrets, recipes, valuable information, etc. If the offer

is accepted in ten days we will send you in addition the
wonderfully suggestive picture in colors, "Uninvited
Guests," suitable for framing, showing the pigs partak-

ing of a meal uninvited.

This equips you for a successful hog business.

AMERICAN SWINEHERD
542 Como Bldg., Chicago, Ill.

Halbach's White Ply. Rocks

Will produce winners again. They are bred that way.
Send for circular, it will tell all about them and their
winnings—it's free. Some choice young stock for sale.

They are under my personal attention. Win-
ners wherever shown. Can furnish you with
cockerels at \$1, \$1.50 and up. Satisfaction
guaranteed.

ORION E. MICHAEL, R. R. 6, Dayton, O.

A Work of Art Free

I mean my new **Thirty-six Page Catalogue.**
It's just out, and you should have one. It tells
all about my

White Ply. Rocks

It tells how to score them, written by Theo. Hewes, one
of our best judges. It tells the cause and cure for dis-
eases. It's full of cuts taken from life of my ST. LOUIS,
PAN-AMERICAN, CHICAGO, CLEVELAND,
HAGERSTOWN, CINCINNATI and INDIANA-
POLIS WINNERS. It's worth dollars to any poultry
raiser, and a stamp will bring it. Hundreds of choice
breeders and exhibition birds for sale.

Eggs! Eggs! Eggs!

ONE HUNDRED YARDS mated up with America's
choicest birds. My egg cat-
alogue is free. It has cuts taken from life of my prize-
winning male birds that head each pen. Don't place
your egg orders until you get a copy. I have undoubt-
edly the grandest lot of White Rocks in my breeding
yards that are in this country to-day.

We Send

AMERICAN Poultry Journal

One year, and a copy of the book entitled
200 EGGS A YEAR PER HEN

The demand for this book has been so great that the third edition has been exhausted, and a fourth edition of 5000 copies has just been printed. It tells how to get the greatest number of eggs at the lowest possible cost. Send orders direct to

American Poultry Journal Pub. Co.
325 Dearborn St., Chicago, Ill.

GREIDER'S FINE CATALOGUE

of Standard bred poultry for 1905, printed in colors, fine chromo, suitable for framing, illustrates and describes 60 varieties. Gives reasonable prices for stock and eggs, tells all about poultry, their diseases, lice, etc. This book only 10 cents.
B. H. GREIDER, RHEIMS, PA.

Winter Eggs

You can easily double your egg yield and cut your poultry feed bill in half by using a

HUMPHREY GREEN BONE CUTTER & VEGETABLE CUTTER

It is guaranteed to cut more bone, in less time, with less labor and in better condition than any other, or you get your money back. A free trial that is free, if you want it. The Humphrey is the only bone-cutter with open hopper free from partitions; no springs or complicated parts. Works easily with one hand. You control the feed, making it cut as fast or as easily as you like. Get one on trial and see how it makes hens lay.

The Humphrey Rapid Clover Cutter

cuts more rapidly and finer than any other. It makes great poultry feed.

Send your name for the new Humphrey Poultry Book. Every hen owner ought to have one. It's Free. Address
HUMPHREY, White St. Factory, JOLIET, ILL.

Widen The Circle

There is no better way for the farmer to widen the circle of his influence than to join with his neighbors in building a telephone line. It extends the neighborhood circle and enables each one to receive advantages that cannot be had in any other way. The cost is meager compared with the benefits of a good telephone line, and progressive farmers, who are awake to their own interests, are building many such lines.

Stromberg-Carlson Telephones

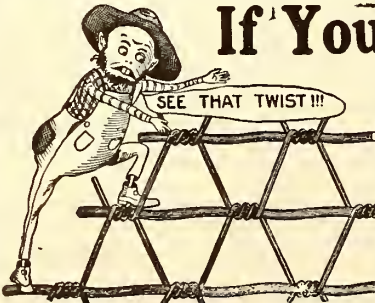

are used on nearly all farmers' lines because they have been found to be the most suitable telephones for that purpose. It don't pay to experiment when you can get *Stromberg-Carlson Telephones* and be sure of good service. Start off with the best and your line will always work satisfactorily. You will also avoid the expense of changing instruments in a few months. Book F-81 "Telephone Facts for Farmers"—tells how to organize, build, and operate a farmer's line. It's free and every farmer should have a copy.

If You Want a FENCE

That is made from the best High Carbon Steel Wire. That is Heavily Galvanized to prevent rust or corrosion. That is COILED to provide for contraction and expansion. That is Strong Enough to turn the most vicious animal. That is Woven Closely to turn chickens and small pigs. That staples to the posts as you would nail a board. That easily adjusts itself to all uneven surfaces. That is woven in such a manner that compels every wire to bear its portion of strain. That you can Buy Direct from the firm that makes it, with Freight Prepaid to your nearest railroad station. That you can examine at your railroad station and return it if it displeases you in any particular. That you can erect and Use for Thirty Days, and if unsatisfactory return at our expense and get your money. Write for Free Catalog giving full information, Address,
KITSELMAN BROS. Box 495 MUNCIE, INDIANA.

MODEL

Incubators and Brooders

NOT THE CHEAPEST—BUT THE BEST

In placing the Model Incubator on the market one year ago I aimed to make it the most efficient hatcher ever produced. The severest test,—that of the practical poultrymen, the men who are in the business for a livelihood—has proven that I accomplished my aim. It is my intention that the "Model" shall always be the best—always in advance of its competitors. I make neither "second-grade" nor "boy's toy" incubators. Every incubator manufactured by me is the perfected product of my knowledge and skill, is built for business, of the best workmanship and material that brains and money can command. The Distinctive Feature of the Model last year was the perfected heating and ventilating system. This was at once recognized as a great improvement over the older system. Minor Features were the adjustable diaphragms above the eggs, and the adjustable split diaphragm below, to facilitate cleaning. In the heater, the smoke-flues were pressed together and riveted by special machinery, making it as though molded in one piece, and rendering it impossible for the lamp fumes to sift through the joints into the fresh air flues; the lamp bowl with seamless bottom, reinforced to prevent the "bellows action" when handling; mechanically perfected regulator bearings; a handsomely finished hardwood case, screwed together, and guaranteed to withstand all action of heat or moisture. The Distinctive Improvement For 1905 is a new thermostat, the actuating principle of the heat regulator, which gives an unusually large amount of movement, and is as sensitive and accurate as a thermometer.

William H. Truslow, of Stroudsburg, Pa., one of the country's largest duck breeders, writes of it:—"The new thermostat is a wonder." G. A. McFetridge, Norwalk, Conn., an old breeder and inventor of incubators, says of it:—"It is the best acting thermostat I have as yet tried." The Meadow Brook Poultry Co., Dallas, Pa., proprietors of the Meadow Brook Farm, "The World's Largest Poultry Plant" write:—"Your new thermostat is more sensitive than any other tried, and will prove a labor saver." Many of the largest practical poultry farms are now discarding other makes of incubators, including my earlier design, and are installing the "Model." Among them are "The Crystal Spring Duck Farm, Oil City, Penn., William H. Truslow's Duckery, Stroudsburg, Penn.; Joseph D. Wilson's Pine Tree Chicken Hatchery, Stockton, N. J., and the largest soft-roaster farm on the South Shore writes as follows:—

Assinippi, Mass., Nov. 21st, 1904.

Mr. Chas. A. Cyphers,

Dear Sir:—We have tried the Model and find that it hatches a larger percentage of the fertile eggs than the Cyphers, and the Chicks are stronger—the kind that live. We could not afford to use the old machines, and have replaced them with the Model, purchased of your New England agents, Messrs. Hollis, Park and Pollard.

Respectfully yours,

FARRAR BROS.

The Model Colony Brooder, an entirely new creation last year, proved one of the most successful and popular brooders ever offered the public. The points of superiority that were particularly commended were its accessibility for cleaning without removing the chicks; the total absence of draughts and hot spots in the nursery; and the light and cheerful wholesomeness of both the nursery and exercising compartments. Almost without exception my customers report that they raised practically all the chicks placed in the Model Colony Brooder. The President of the American Poultry Association writes:

"I think you have the right idea in a brooder. It does the work to my entire satisfaction. Have run one through three broods, only losing one chick, which I killed because it was a weakling."—D. Lincoln Orr.

You use the machine free for 30 days. If you like it, you pay for it; if not, back it comes to us. Write us for our free catalog that explains it all.

Pure Bred Poultry for breeding and exhibition in all standard breeds and varieties always for sale. They're money makers. Eggs for hatching. Write for prices and free catalog.

Badger Incubator Co.

Box 34

Delevan, Wisconsin

IF YOUR INCUBATOR IS A

BUCKEYE

1890 It hatches a strong, vigorous chick from every good egg put in it. You raise more of them, 1905 than if hatched in any other incubator or under hens. It is absolutely self-regulating. No supplied moisture.

HUNDREDS HATCH EVERY EGG USED

PRICES BELOW ALL COMPETITORS

Don't take our word, but write our patrons. Among those, doing this with our incubators are: Mrs. E. E. Brack, Haverhill, Kan.; Mrs. W. F. Graham, R. R. No. 1, New Hartford, Ia.; G. F. Mankin, L. B. 64, Luther, Mich.; Bert S. Robinson, R. 3, Urbana, Ohio. Send for FREE catalogue, giving others in every state.

\$4.50 How is this for a 50-Egg, hot water, self-regulating incubator. Or for a 100-Egg size, of the same, all ready to operate, \$8.50. \$13.75 for a 200-Egg size, which has hatched 146 chicks from 200 eggs. Think of a complete outfit, both Incubator and Brooder, 50-Egg size, ready for use, \$7.50.

Don't keep it if it don't suit in every respect. Sold on

30 DAYS' TRIAL

Brooders all sizes and kinds, from \$3.00 up.

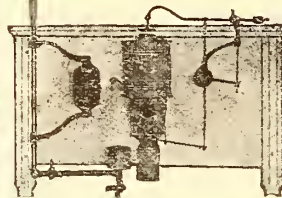

BUCKEYE INCUBATOR CO..

Box 2

SPRINGFIELD, OHIO.

Will Your Incubator Do This?

Will your incubator hatch a setting of eggs with one-half the oil you now use? Will your wick burn 21 days without trimming? Will your regulator control the flame, raise or lower it as required? Will your burner burn without charring wick, overheating, causing liability to fire? Will your machine save half the time, half the labor, half the cost of operation? Put on this outfit and it will do even more. It will make your old machine do better than it ever could do, besides save you many dollars and much annoyance. Its combined damper and flame regulation alone saves half the oil. Its burner saves danger from fire—can't overheat. Its wick saves trimming—never needs it. Its regulator controls both flame and damper (see cut); this avoids too high or too low a flame.

saves seventy-five per cent. of gas.

ACME AUTOMATIC LAMP AND COMPOUND REGULATOR

make hatching or rearing both pleasurable and profitable. Sold separately or together. Fit any machine; any one can attach them. Send for catalog giving detailed description and our full line of fixtures, including illustrated plans for building the famous Peerless Incubators and Brooders. Nearly 100 photographic views showing step by step every stage of incubator construction. It's free. Our new gas regulating burner for incubators.

A. A. EVANS

Bement, Ill., U. S. A.

There are good things in store for incubator and brooder users this season. The Cornell Incubator Manufacturing Co. have in their 1905 model Cornell Incubator a machine which they claim is at least **ten years ahead** of anything yet produced, and they **absolutely guarantee** that it will hatch every fertile egg which will, **under any conditions**, produce a **healthy chick**. More than this, they will furnish to their incubator customers, copyrighted instructions indicating a system whereby may be determined what eggs are fertile and those that are not, **before they are put in the machine**, thus enabling the operator to save nearly all, and with practice perhaps all of the eggs which have heretofore been "tested out" and thrown away at different stages of the hatch. Who will say that this is not "a step ahead?" When it is appreciated that **practically all** of the **valuable improvements** on **incubators and brooders** of the **past five years** have been evolved by the Cornell crew of experts and patents obtained by the Cornell Company, it is not surprising that they should have discovered this important law of nature, which comes as a revelation and a godsend to the thousands of incubator users throughout the world.

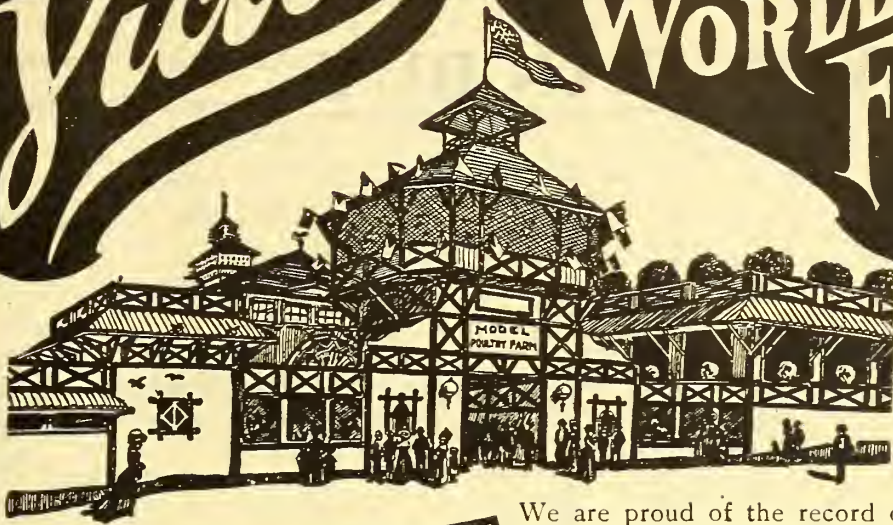

\$5,000 in GOLD

TO USERS OF

Cornell Incubators

In addition to all these good things the Cornell Incubator Manufacturing Co. offers **five thousand dollars in gold** to users of incubators of Cornell make, in legitimate competition. The prizes will be awarded as follows: Capital prize **one thousand dollars**; second prize **five hundred dollars**; third, fourth and fifth prizes **two hundred and fifty dollars** each; the next five **one hundred dollars** each; the following ten **fifty dollars** each; the next forty **twenty-five dollars** each; and seventy-five consolation prizes of **ten dollars** each. Never before in the history of the world have such opportunities come to the poultry fraternity. Intending purchasers of incubators and brooders will do well to place their orders early with the Cornell Incubator Manufacturing Co., 10 Brindley Street, Ithaca, N. Y. and get the full effect of their liberal benefits to customers. Write to-day for full particulars.

THE Victor AT THE WORLD'S FAIR

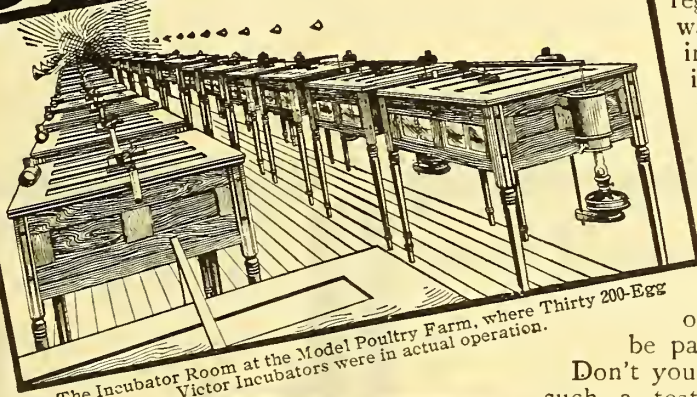

We are proud of the record of our machines used at the Model Poultry Farm, Louisiana Purchase Exposition. Day by day the hatches came off regularly and satisfactorily. There was no failure, even during the trying days in the early spring when the incubator room was flooded, when the water even put out the lamps under the machines. But the machines held the heat, and full hatches came off in due time.

We consider the selection of our machines for the Model Poultry Farm and the enthusiastic endorsement of its management after the eight months of the fair, the highest tribute that can be paid any incubator.

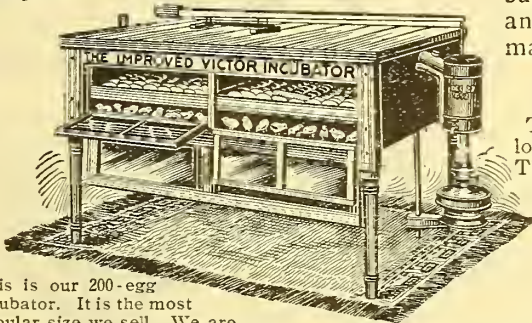

Don't you think that a machine which has stood such a test as this, will prove satisfactory to you and that you owe it to yourself to investigate our machines and methods before you purchase?

The Victor Book

That is what we call our 80-page handsomely illustrated catalogue. Only about thirty pages are devoted to our machines. The rest is valuable information for the poultryman, amateur or expert. Better write for it today. We'll gladly send it.

The Incubator Room at the Model Poultry Farm, where Thirty 200-Egg Victor Incubators were in actual operation.

This is our 200-egg incubator. It is the most popular size we sell. We are

proud of its construction. It is simple and easily operated. There are no useless frills. We have perfected it by long and careful experimentation. When you buy a Victor machine you are not getting an experiment—you get one that can be counted on to hatch every fertile egg. You get a machine made from carefully selected and seasoned lumber.

You get fourteen-ounce copper in the boiler and tanks. You don't get green lumber that hasn't had time to properly cure. You don't get some cheap substitute for copper. You don't get a machine so poorly made that you are ashamed to show it to your neighbors. In fact, "V-I-C-T-O-R" spells incubator satisfaction. Please write for our book and let us convince you.

Geo. Ertel Co., Quincy, Ill.

Darling's Poultry Foods

Quality is Remembered Long After Price is Forgotten

YOU CAN BUY **Cheaper Foods** Than Darling's

Some are so "cheap" they are next to worthless. Buying them is pure waste. Darling's Foods have a reputation for quality. We propose to sustain that reputation. We are not afraid to send you samples. When you order a 100-lb. sack we guarantee it will be the same—high in protein, low in fat—the food for results, highest quality goods of that kind there is made. We are glad to have poultry raisers compare our goods with others in appearance, in quality as shown by analysis and results, particularly as to results. Darling's prices always mean f. o. b. Chicago, cash with order.

Beef Scraps

An egg producer, great food for ducks and geese. Contains 60 per cent protein; clean, sweet and free from taint. Price, per 100 lb. bag..\$2.25

Laying Food

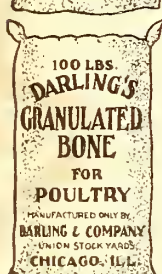

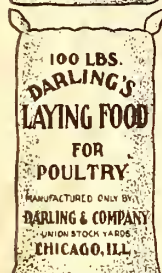

"The Egg Producing Mash," prepared after scientific formula to induce laying in cold weather. Price, per 100-lb. bag.....\$2.25

Granulated Bone

Almost wholly phosphate of lime and protein. Made of green cut bone, worthless parts extracted. A valuable all-purpose feed. Price, per 100-pound bag.....\$2.00

Don't forget that our Stock Yards and Packing House Location gives us advantages other food makers do not enjoy. **Darling Quality** cannot be duplicated at Darling prices. Get our large Poultry Supply Catalog for Grits, Lice Killers, Roup Cure, everything for the poultryman. Above all, get our special poultryman's booklet, "Fill the Egg Basket." It's written from your standpoint, but it's our trade-mark and it's free. Address,

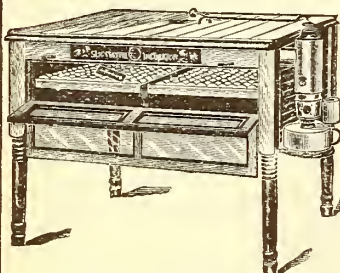

Darling & Company, Dept. C.
UNION STOCK YARDS, CHICAGO

There are Reasons Why

You may not be very successful at poultry raising and yet it may not be your fault. You are not expected to be an expert. But your hatcher and brooder should be works of genius. They should be able to do things for themselves. That's the business of their maker. You are relieved of care and yet know that things go all right with

Successful

Incubators and Brooders

Of all machines they are the nearest perfectly automatic. That's why they give such uniformly good results for all people, novice as well as expert. They make natural hatching and brooding conditions under all circumstances. They regulate the heat, ventilate and distribute moisture like a human intelligence and

Bring the Highest Possible Per Cent of Chicks.

Their record of years stands unapproached. Make no mistake. Get the kind that's dependable.

CULTIVATED FARMS IN THE GREAT SOUTHWEST SELL QUICKLY

The reason is, they are good investments. They pay for themselves with the first year's crops. What better do you want when there are still millions of acres of uncultivated land just as good as those now under cover of waving grain, which can be had for from \$3 to \$10 an acre. However, from the way settlers are pouring into the Southwest, this bargain cannot long exist.

Let us tell you more about these low-priced lands and low-priced tickets, which are on sale the first and third Tuesdays of the month.

PERFECT SPECIMENS OF SINGLE COMB **WHITE LEGHORNS** FOR BREEDING PURPOSES

FINE vigorous breeding Cockerels of extra good plumage, carriage and head points at exceptionally low cost. A class of birds which those who wish to introduce our strain into their flocks and do not want to pay a high price, should purchase. Our strain of birds is noted for its heavy egg producing ability, its vigorous, healthy stock and high percentage of standard points. The purchaser of one of these Cockerels will ingraft into his flocks these most desirable qualities.

We also have for sale, first class breeding females, both Pullets and Yearling Hens. The price depends upon the number of birds desired. We make specially low prices on large shipments. Although we have special facilities for furnishing large numbers, we give equally careful attention to orders for single birds, trios and pens.

PRIZE WINNING EXHIBITION STOCK

We have a few Cockerels, from exhibition pens, whose ancestors for several generations have won prizes in all the leading shows in the United States. If you wish to breed fancy show birds, you need one of our high grade exhibition Cockerels. We also have exhibition females and will mate up for the purchaser, trios or pens, which will produce the very best results. If you need breeding birds for the coming spring, send at once for description of our birds and prices.

No. 1.

The Fancier in the Poultry Yard

The Mating of the Breeding Pens this Month in Order that the Early Chicks May be Secured for Early Maturity.

One Way in which to Secure the Greatest Amount of Value from the Best Stock—A Good Manner in which to Introduce New Blood into the Flock.

Written by Thos. F. Rigg, Associate Editor American Poultry Journal.

The work of mating, of the selection of the specimens which are to occupy places in the breeding pens, will early this month receive the careful consideration of the fancier.

It is none too early, even in the north, to mate the breeding stock. Year by year the importance of getting out early-hatched chicks is made more plain to the thoughtful fancier. It is such chicks properly hatched, reared and handled that pay the big profit. Not only this, and of far more importance to the true fancier, is the fact that such chicks are the ones from which we must select our breeders year after year, in order to obtain the best results. This is true from either view point—that of fancy or of commerce.

No breeder can annually breed from late-hatched, and, consequently, immature stock, and have strong, healthy and standard size stock.

It can be truthfully said that the using of immature male birds as headers of breeding pens, is the cause of a very large number of failures in the standard bred poultry business. Most certain is it that the use of such males and immature females as breeders accounts for so many breeders finding it impossible to select specimens of proper size and development to represent the breeders in the show rooms in the late fall and early winter.

The late hatched cockerels and pullets cannot, in the very nature of things, possess vigorous breeding power at the opening of the following breeding season.

We must have matured size and vigor, especially in the male bird heading the breeding pen.

With any other male occupying this important place we fall far short of best results.

* * *

The fancier whose stock has been properly housed during the winter has been at work on the formation of the breeding pens all winter. Every day he has noticed the condition of each individual specimen—watched its development, or seen it fail to “come along” as it should. When he placed the stock in winter quarters he made his selections of breeders, *provided* each of these specimens developed into the kind of stock they then promised to do. But here and there one failed to meet the high ideal of the fancier. Now such specimens are set aside. Only the best—the very best—specimens can be given a place in the breeding pens. It is quality, not quantity, we desire and are bound to have.

* * *

Let us now consider what is required, as the quality, in the male bird which is to head the breeding pen.

We hold fast to the fact that this male should be matured as to size and weight. If the specimen has been properly fed and otherwise cared for, he should be full standard weight. If he is not up to standard weight, it is conclusive evidence that he is under-size. Size is of the utmost importance, and is too frequently overlooked. We must use no specimen in our male line that is not the best representative of the breed or variety we are breeding, because that male line will be kept

unbroken by the successful breeder for years and years.

A cock bird that is under size should not be used. Such a male has no place in the fancier's yard.

If the cockerel you have intended placing at the head of the breeding pen is not *now* full size, set him aside. He should be of required size and weight by January 1st if of early hatch.

Sexual development should not be mistaken for breeding worth and power, as it too often is.

In the selection of the breeding male color markings are of secondary consideration. Size and weight and vigor are of first consideration, even though it be a fact that male controls the color of the offspring to a greater extent than does the female.

An unmatured, weak male cannot sire desirable chicks, no matter how nearly perfect he may be in color markings.

* * *

How the fancier who has devoted years of time, and accompanying thought and care, in the building up of a strain of fowls, loves the hens over there in the pen. To him they are the Crown Jewels of his yards. He *knows* just what their breeding qualities are. They have been found right by test. He knows that, properly mated, they will give him a lot of chicks of uniformly high quality. He is taking no chances on them. They may not be quite as gay or quite so pretty as the charming pullets in the adjoining pen, but the old fancier understands all that. These hens have aged; they have gone through several moults; they have come through without developing serious faults in color, and have held shape and form well.

They are, therefore, of *known quality*.

The most beautiful, and to all appearances, the best pullet in the next pen, the one which, perhaps, wins a prize in the large show, may go all to pieces as a hen and be worthless as a breeder.

It is taking chances, big chances, every time we breed from a pullet or a cockerel.

No matter how well bred a pullet or a cockerel may be, we do not, cannot, know to a certainty what breeding qualities either possess.

It is the fully matured cock and hen we can breed with knowledge and known safety.

However, pullets are in the majority in the breeding pens the country over, and, therefore, we must consider the selection of them as breeders.

It is well to proceed along the same lines, so far as size and vigor are concerned, as characterized our work in the selection of the breeding male.

Make size and weight and shape the first consideration.

Let the pen pullets be as nearly uniform as to shape and size and color as possible. Above all, do not give the male a number of females differing radically in shape, and in color markings. If you do give him this illy assorted lot please do not be disappointed next summer in the quality of the stock produced.

If, in your lot of pullets you have but two or three of extra good quality, let that two or three constitute the female side of the pen. Stand firm on that proposition. It will require considerable will power for a young or inexperienced breeder to do this, but he who does so will be the winner.

Bear in mind that a few extra good chicks are worth more than any number of poor ones, or a great number of fairly good ones.

Do not make the common mistake of giving the male about the number of females he can care for and letting it go at that.

This manner of mating breeding pens is too commonly practiced.

By such a mating the breeder is at sea. He knows nothing as to the individual breeding of any of the young stock, so far as

the female blood line is concerned. The next season he must mate his pens solely upon the *appearance* of the quality of the stock.

No breeder can ever obtain satisfactory results by so doing.

* * *

In nearly every flock there is one hen or pullet that is far superior to the others, a specimen of exceptional quality.

By the haphazard mating, that of placing a number of females with the male, eggs from this best female may or may not all be used for incubation. If they are, the chicks from them will not be kept separate or punch marked.

Every egg from this choicest female should be used for incubation, and the chicks therefrom given special care.

Comparatively few breeders will use the trap nest.

A good way to handle this best female is to build a small pen and yard adjoining the regular pen yard.

Place this female in this yard during the breeding season.

It is in the introduction of new blood that so many breeders make a mistake.

If you are going to need new blood soon, there is by far a better way of securing it than by purchasing a male of distinct blood lines.

Purchase the best hen you can obtain and use her this season as we above advised you to use your own best female.

The chicks from this new hen will this year be one-half the blood of your own strain, and one-half that of the strain upon which you have drawn.

Next season mate the best pullet secured this year from this hen to one of your own strain males.

The chicks from this mating will be three-fourths the blood of your own strain, and one-fourth the blood of the original female purchased. This infusion of new blood, one-fourth, will be sufficient to carry your stock in perfect health and vigor, and the stock will retain the markings and characteristics of your own strain.

Bear in mind that the public will demand better quality in

MARY E.

First Prize White Plymouth Rock Hen at the Great World's Fair, St. Louis. Bred, owned and exhibited by U. R. Fishel, Hope, Ind. Mr. Fishel values this hen at \$500.

Allow the male to be with her for half an hour or so a day. Then remove him to his regular pen quarters.

Set all eggs from this female. Punch-mark the chicks and give them the best of care.

You will be surprised how well you will be repaid for this little extra labor.

The lot of chicks will be of uniform quality, high grade and practically every one of great value, comparatively.

It will give you an insight into the pleasures and profit to be derived from line-breeding.

The following year you can mate the best of these pullets to their sire and still improve your stock.

You can establish a male line by the same year breeding this hen to the best of the cockere's secured from her eggs this year.

standard-bred poultry during 1905 than it did during 1904.

Do not lose sight of the fact that the pleasure and the profit is in producing the best quality of stock.

The breeder who raises just fair to good stock has to compete with thousands and has no voice in fixing the price.

The breeder who produces extra choice stock has but little competition and can fix his own price.

It is the best of everything the world is clamoring for, but cannot secure.

Be among the leaders. There is no field of operation more inviting, more sure to yield a rich return to the careful, thoughtful, earnest worker than that of standard-bred poultry breeding.

A successful year to each and every one of you—and you will secure it if you deserve it.

THOS. F. RIGG.

GETTING BEFORE THE PUBLIC.

Selecting the Foundation Stock—Attending the Poultry Shows—Culls are Poor Advertisements—Shipping Promptly—Use Good Stationary.

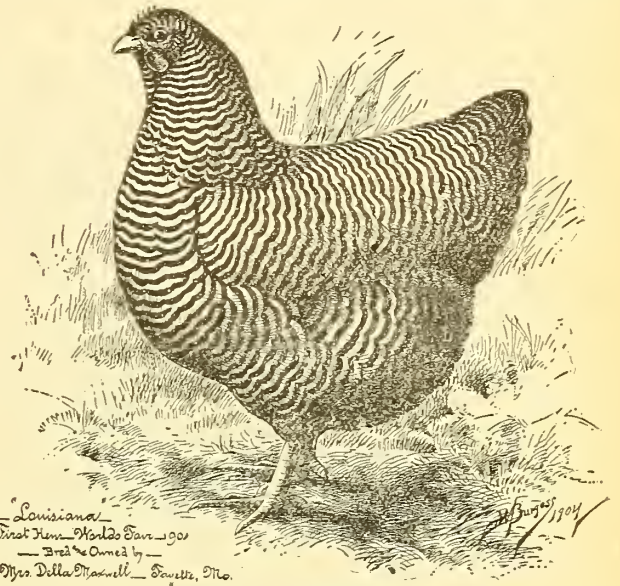

To desire to get prominently before the public as a fancier and breeder, and establish a paying business in thoroughbred fowls, is a worthy ambition, and the beginner who is not ambitious of this kind of success would better stop before he begins at all. This is not the "vaulting ambition which o'erleaps itself and falls on the other" that Cromwell was advised to "fling away," but the ambition which benefits the possessor and the public, which stimulates the beginner to employ the best methods and leads him to obtain the best results.

To begin at the beginning there should be a wise choice of the variety to be kept, and a wise choice demands, first of all, the selection of a variety suitable to the environment, one that can develop its highest possibilities in the place where it is to be kept, one that will be helped by, and not have to contend with, its surroundings. It is a commonplace observation that the Light Brahma will do best upon a granite soil, that the Dorking will thrive best on dry land, that black fowls are especially suitable for hot climates, and that the fowls with the black-red coloration are specially adapted to situations where iron abounds in the soil. While every variety will adapt itself to any surroundings, some varieties will do better in one situation than another in a different situation.

Again a wise choice means the selection of a variety best adapted for the special purpose in view. Every beginner has, or should have, not only a desire to succeed in his efforts, but also a special purpose to be accomplished. Back of the ornamental characteristics of the variety lie the practical qualities. Upon the practical qualities, as upon a solid foundation, rests the superstructure of the ornamental, the so-called fancy qualities.

No breeder can expect to attain the highest degree of success in breeding fancy fowls as a business, who ignores the practical qualities of his poultry. The beginner, therefore, should select his variety with some reference to the practical side of the business. In respect to practical qualities, fowls are divided into three classes, layers, table fowls and general purpose fowls. If the beginner desires eggs he should select from the great laying breeds, like the Mediterranean and Hamburgs; if he prefers table fowls, his choice should be made

he should make a wise selection of the foundation stock. To do this, the beginner will need to consult some expert, some one thoroughly familiar with the variety and its breeding tendencies, for at the outset he needs greater knowledge than he possesses. If, however, he will purchase a small pen of the selected variety, properly mated for breeding, from a well-known successful breeder, and will allow the seller to make the choice, he will be likely to get the proper foundation stock. In making this purchase he should not limit the seller on the price to be paid, and should not ask for exhibition, but for breeding fowls. What he ought to purchase is a pen of the best breeding fowls, mated to produce chickens that will

BARRED ROCK HEN.

Winner of first prize at World's Fair, 1904. Bred and owned by Mrs. Della Maxwell, Fayette, Mo.

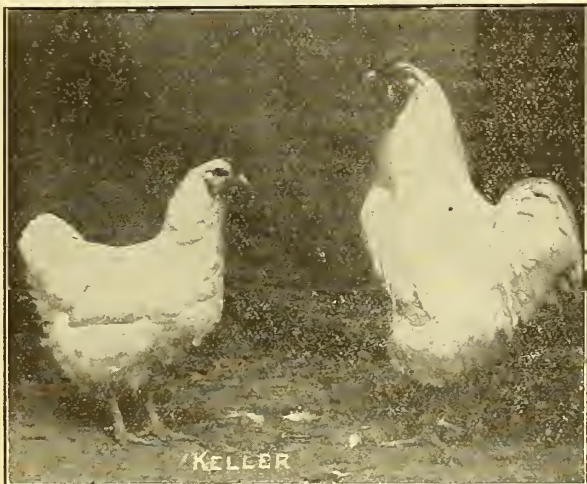

develop into exhibition birds. Better pay fifty or one hundred dollars for five first-class breeding birds than to have second-class birds as a gift. The fowls will give him an object lesson in the proper mating of the variety as well as produce for him chickens worthy to exhibit and fit for sale.

The beginner, after the purchase of a foundation stock, should make a careful study of the origin and history of the variety, so as to know the elements of its make-up and what to expect in the way of reproduction. He will be aided in this study by the purchase of the best books and the reading of the best poultry journals. The former will give him the history, the latter will put him in touch with the latest thought upon the subject. The man who can afford to do without literature of this character was never intended to be a successful breeder. He should study the standard of the variety to know what characteristics are demanded in a successful exhibition specimen. And in addition to this, he should study the variety itself, his own fowls, the fowls of his neighbors, and especially those found in exhibitions. Until he has mastered these details, he is not prepared to make proper matings of his own stock, and so is not prepared to do the work that stamps a man as a competent breeder.

Having done all this, and so having laid the foundation for success in breeding, he should study next the best methods of rearing the chickens. Good blood and excellent matings are only a beginning. The rearing makes a wonderful difference in the actual quality of the stock. Chickens hatched from eggs laid by the same fowls, but reared by different persons, will sometimes vary so much in size, shape, and even in color, that they would never be recognized as of the same parentage. To get the best, one must needs know how to feed and care for the growing chicks, so as to secure the most perfect development of their several characteristics.

To summarize what has thus far been said, the beginner who has an ambition to get prominently before the public as a fancier and breeder and establish a paying business, must, as his first step, learn the art of breeding, become a breeder and fancier, be able to produce the stock the public wants. But even where he has done all this, the beginner is still an unknown quantity, a "mute, inglorious Milton," a possibility, but not a factor in the poultry world.

To make himself known is the next step, and the first thing to be done to make himself known is to exhibit. Let him ex-

WHITE WYANDOTTES.

A pair of New York winners. Bred and owned by Ira C. Keller, Prospect, Ohio.

from the Games, the French breeds and the Dorkings, and if he wishes general purpose fowls the American and Asiatic classes will meet his demands.

And once more a wise advice requires that the beginner should consult his individual taste. Most breeds consist of several varieties, varying in color and markings. The variety which suits the beginner's taste of the breed which will best meet his special purpose and the class most in harmony with the environment in which it is to be reared is the one which should be selected, because that is the variety which will receive the best care, will be the most assiduously studied, and will return the largest profit.

Having, therefore, determined what variety he will breed,

hibit his fowls fearlessly. He has nothing to lose and something to gain. Suppose he meets defeat, this can be properly made a stepping stone to success later on. If he wins, he has taken a long stride in his attempt to make himself known. Even if he loses he has come before the public, his fowls have attracted some attention, he has made a beginning. He should exhibit quite largely, not at one, but at several shows his fowls should be seen. The local exhibition should be one of these shows, and some one of the largest and best exhibits should be another. At no place will a beginner learn so rapidly as at an exhibition, when there is strong competition in his variety, and when his fowls make part of that competition. He will compare the products of other fanciers with his own, he will note the points in which his stock is weak, and will

S. C. BUFF LEGHORN COCK.

Owned and bred by R. T. Whitman, Belvidere, Ill. Score, 94½.

know how to obliterate them; he will become acquainted with brother fanciers, who will give him advice of great value to his operations, and he will come away from the show, not, perhaps, a sadder, but most assuredly a wiser man.

The next step in making himself known as fancier and breeder is to join the great army of advertisers. To exhibit was placed first, because if he won he would have excellent material for advertising, and not only because it was the most potent force in gaining publicity. The shows last but a few months, the poultry journals continue their labor the whole year through. No one can estimate the power of the poultry press. It sends out its silent influence month by month, silent indeed, but potent as the silent things are. It is not the noisiest things which are the most powerful. We all remember the fable of the wind and the sun, who attempted to take off the traveler's cloak. The wind blew his hardest, strongest and best, but the traveler only wrapped his cloak more tightly about him. Then the sun beamed upon him, silently, and its warmth made the traveler remove his cloak. So silently works the poultry press, and so efficiently is its work done. Advertise, advertise, advertise. Tell the truth, but keep your name and your stock before the public until it learns to associate your name with the variety, and the variety with your name.

When you have a really fine specimen, have it illustrated. It costs something to do this, but good pictures are better than long orations. They appeal to the public, and the public will be drawn toward you by them. Poultry journals are always glad to have new, real portraits of first-class fowls for publication, and each publication is an admirable method of advertising and supplements advantageously for other advertisements you may have running.

By and by your first customer will be found. Treat him so well that he will come again. Make every customer a friend, and each will bring you another customer. The endless chain will then be begun, the possibilities of which no one cares to limit. To make every customer a friend it is necessary to treat him handsomely, to have the stock sold a little better than it has been described, to give full value and something over on each order.

Sell only first-class stock. Kill the culls. Don't let the temptation of a few immediate dollars lead you to send out stock that will not be a good advertisement for you. Every fowl sold in an advertisement is a good advertisement, if the fowl is a good one; a bad investment if the fowl is a bad one. Don't use a cull, even if you sell it for a cull. The buyer will say to some one that he bought the specimen of you, and he will be sure to forget to add that he bought it as a cull. Culls are a bad advertisement, trade-killers, not trade-bringers. They will help to bury you in obscurity, not to bring you prominence. Be strictly honest. Tell things as they are. Get a reputation for doing just what you promise to do, of selling just what you offer to sell. Be prompt. People like promptness in business. If you say you will ship a pen of fowls on Monday, ship them on Monday, so as not to disappoint the customer. If the shipment is unavoidably delayed, write the customer and tell him the fact and the reason of the fact.

Use good stationery, neat letterheads, good quality of paper. It has a business look, and will tend to give people confidence in your ability. Don't be afraid of the expense. "Nothing succeeds like success," and the man who appears to be prosperous is in a fair way of becoming a prosperous man. A good circular will help you. It needs to be gotten up neatly, well illustrated, well printed. It is a good help in correspondence and saves much writing, but don't make the mistake of supposing that it can take the place of the regular advertisement. If you do, you will miserably fail in your expectations. It may usefully supplement the advertisement, but it can never take its place. You cannot jump the printer, unless you wish to seek self-destruction.

And now learn the conclusion of the whole matter. The beginner who cherishes the honorable ambition to place himself prominently before the public as a fancier and breeder and establish his business on a paying basis, has just these things to do. First, to make himself into a real fancier and

RHODE ISLAND RED MALE.

First prize winner at Reading, 1904. Owned by Chas. F. Thompson & Co., Lynnfield Centre, Mass.

breeder. Second, to use the proper methods of letting the public know the fact, and third, to deal honorably with all men and use business sense in his dealings. The beginner who complies with these three requirements is as certain of a reasonable degree of success, as it is certain that the day will follow the night, or that an effect will follow an efficient cause. This advice is the rule of three, not as given in the old-time arithmetics, but as worked out by human experience in our own days.

H. S. BABCOCK.

Providence, R. I.

A little farm near a great city, with the market at one's door—fowls and fruit and garden—children at play among the flowers and in the orchard—everywhere evidence of the gentle touch of a woman's hand—God's commandments obeyed by the father and mother, and the prayer offering by prattling little lips nightly—here success will surely crown the efforts of the bread-winners, for God's blessing and men's approval rests upon such a home.

The ADVANTAGES OF ADVERTISING

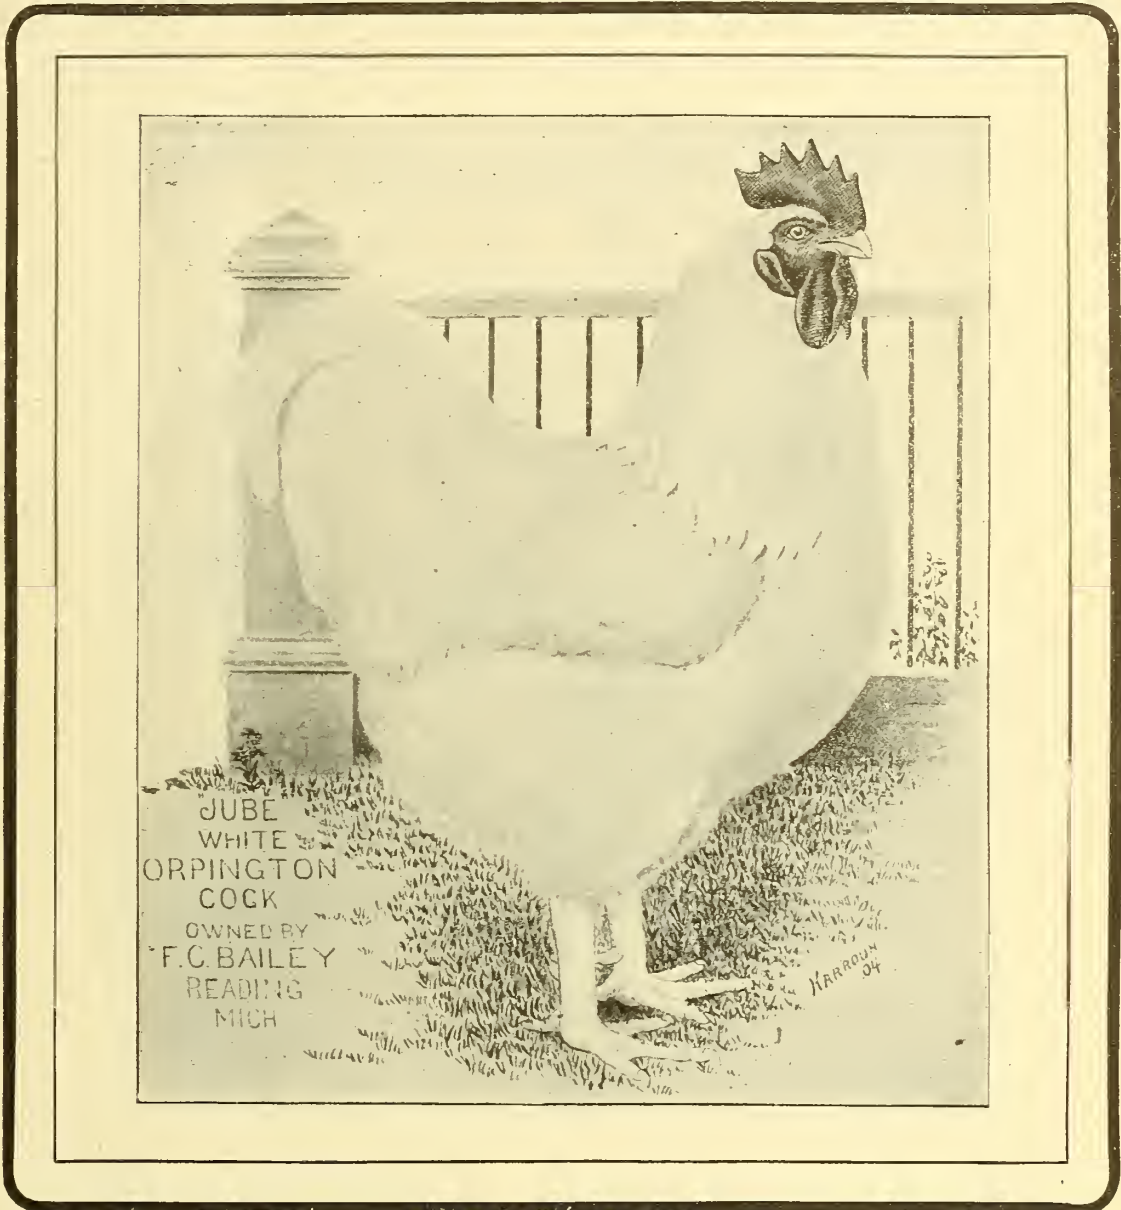

The Selecting of the Medium—When and How to Use Same to Advantage.

The advantage of advertising can best be gained by the proper use of a good selection of the many mediums that are offered. But first of all, you must have something to advertise that some one else wants; then you must present the value of your offering in a plain, honest manner, and be positively certain that you deliver what you promise, if you court success; for so sure as you deliver to a customer other than what he has the right to expect from the wording of your

the unprofitable results soon make a skeptic of him that ventures, and he is soon lost sight of as the prominence gained in this way usually centers about the individual himself.

FOR BUSINESS GAIN.

When the gaining of a profitable business is the interest of the advertiser, there are but two rules to follow: The one to place an advertisement in every journal that offers; the other, to make a study of those presented and select from all what seems best fitted to gain the desired returns. And there is no better evidence of the value of a journal as an advertising medium than the fact that it has been published continually for a number of years, and that both its subscription list and advertising patronage have increased. The real value of a paper to its subscribers must be reckoned upon the renewal of subscriptions.

WHITE ORPINGTON COCK.

Bred and owned by F. C. Bailey, Reading, Mich.

advertisement, the facts concerned will spread faster than you can imagine almost to the end of the earth. While at satisfied customer is a valuable advertisement, a dissatisfied, mistreated customer is of the greatest injury.

There are several reasons which prompt the use of the mediums of advertising. Among them frequently can be found the prominence a flaming advertisement gives. For this no other return is expected, as is often shown by the fact that eggs for hatching from my prize winners is still on deck in October. This style of venture, as it might be called, had best be placed in the columns of the journals that allow plenty of space at a small price and gains the object most desired. On this class of people the snap games can be readily played;

If a journal has a strong per cent in renewal list its subscribers are interested; if not, the subscription is largely among a floating throng who have but little interest in the subject the papers treat of.

The journals that have stood the storm of years and gained both in position and condition, carrying with them public favor and confidence and an increased circulation, can be depended upon to give the best results. All new publications must depend upon building up their circulation from new-made converts, or they cannot have any advantage to offer; from the fact that it is quite apparent that these subscribers on the old journal lists fully cover the subscription list of the new journal. If these same subscribers take both papers, no advantage

can be gained by an advertiser using both mediums. For this reason he should acquaint himself with the number and location of the subscribers to a journal he contemplates patronizing.

MUST HAVE THE GOODS.

Even the best mediums cannot bring business if the subscribers do not want our wares, nor can we hope to gain attention unless we present our goods for sale in an attractive manner. Above all things do not over-rate or misstate the case. The old song, "Stock and Eggs for Sale From My New York Winners," when possibly nothing you ever owned has been inside of Madison Square Garden, is so thoroughly worn out that people pass it by. Those who know better, wonder at the statement; those who do not, conclude that such quality is beyond their price, and no one is caught in the trap. The best way to sell your wares is to state plainly just what you have, and the price for same, for in so doing quite likely some one will want just what you have to sell. But, surely, no one who knows anything of poultry will be misled by catch phrases.

HOW TO FOLLOW IT UP.

Another feature that contributes largely to the success of an advertisement is the proper presentation of the goods in answer to an application. Thousands of sales are lost to some and gained to others in this way. Those who can convince the would-be purchaser that what they offer is just what he is looking for, will succeed the best. To do this it is not necessary to overrate the value of the stock; at the same time it is quite necessary to present in glowing terms their good qualities, and in doing this it must be done in a convincing manner that will attract and not in a way that creates mistrust. Remember always that the buyer is the judge and you the exhibitor, and present your goods accordingly.

Following this, always send better than you promise, and in addition show a willingness to take back the stock if not satisfactory to the purchaser. Write all your advertisements and letters with the thought in your mind that if not as represented, it will all come back if sold. With this thought to influence, all will be satisfactory nine times out of ten; for such determination insures the practice of doing as we would be done by, and removes all possibility of wilful misrepresentation.

WHAT TO DO.

One of the most successful firms in the country has for years used the following motto: "Keeping everlastingly at it

Feeding colony of young Buff Wyandottes on the farm of Ackley & Page, Woodstock, Ill.

brings success." This does not mean to keep a standard advertisement as some construe it; but it does mean just what it tells us, and that is, to keep everlastingly at it. And the best way to do this is to keep your name *constantly* before the public, in such a way as to attract its attention. Your name and the goods you have to sell are the important factors. But do not advertise spring bonnets in the fall, as the saying is; keep your offerings fresh and bright, and of the kind in demand at the time of year when represented. To successfully do this proves your ability as a salesman.

In season or out of season the successful advertiser keeps his name before the public, no matter whether it is selling season or not; keep constantly pounding into the minds of the people your name and business; imprint these so deeply into the mind of the people that it will be impossible for them to forget your name when they wish to buy what you have to sell; also make it so strong that when they see your name, they say: "Oh, he is the Brahma man." Make your name and fame a by-word all over the land, so a buyer cannot pass you over when looking for your kind of stock.

HOW TO DO IT.

Just how best to accomplish the desired end is about the hardest problem in advertising. The catchy advertisement is the phantom of the hour; the whole selling world continually work their brains for some new method or device to attract the attention of the public. No matter how it is done, or what is said to gain attention, if profitable, it goes for the time. But herein may be found the secret of many failures. Remember,

you can fool almost any one once; you may fool them twice, but you will not get the chance at them or their friends again after that. For this reason it is best to consider what you will say in advance, so as to gain the confidence of all who may read your advertisement.

Above all things, do not advertise that which you cannot deliver. Never offer 500 birds for sale when you only have 50; for if you do, the ink will hardly dry on the advertisement when some one is telling the facts to your injury. It is by far the best to tell just what you have to sell, in plain, honest words, and in a manner that will attract; from the very fact that it tells so plainly what you have, and proves at a glance that you know your business.

OTHER WAYS.

The order of the hour is to get something for nothing. We had an application not long since for 500 Leghorn pullets at 60 cents each. Our reply was: What will you take for the thousand you have? The would-be purchaser said: One dollar and fifty cents each. The buyer of all kinds of farm products and live stock has for the past made, and can to-day, almost make his own prices. This comes of the necessity of the producer who loads himself down beyond his ability and capacity to care for his holdings. This causes him to rush into print with that manner of advertisement that tells all who see it of his dire distress, and the natural inclination of all mankind is to allow you to keep that which you seem anxious to be rid of.

The very time to be firm and resolute in the wording of your advertisement is, when most anxious to sell, never allow the wording of same to indicate the necessity of speedy relief; rather infer that a favor is done the general public by your consenting to let go some of your high quality stock. Don't intimate that they must be sold to make room, for this carries with it the intimation of debility and disease from overcrowding. Again, if you have a hundred birds to sell it is better to sell ten of the best for \$10 each, and the other ninety to the butcher than to injure your reputation by selling all of them at \$1 each.

CONTINUOUS ADVERTISING.

The most successful returns come from continuous advertising, properly done. A smaller advertisement, well worded and continued, will pay better than the full page flash once or twice a year. The one is like the explosion of powder that excites comment for the time, and is then forgotten; the other like the North Star to the mariner, constantly watched when in sight, continually looked for when hidden. The well-worded advertisement, that is continued in, makes your name and stock public property which are never overlooked.

The most advantageous manner of using the continuous advertisement depends upon the kind, quality and amount of stock you have to sell; calculate your advertising to cover the amount of business you might do, providing you can sell all you produce; work your advertisement to this end with the same determination as you do your other business. If you succeed in one you should in the other. Advertising is a business proposition; do not indulge in it for fun or friendship, for if you do both may be gone. Take the space for the good it may do you and work it continuously for all there is in it for you. Don't forget to keep it fresh, bright and attractive all the while, for therein lies your profit.

THE PROFIT IN SAME.

To be profitable an advertisement must offer that which is sufficiently in demand to guarantee sales enough to bring returns to the outlay, cost of production, and profit hoped for. Paying returns will not come from the advertising of stock that has no sale. The same applies to the lack of reputation. An unknown breeder must make his name and stock known through the advertising columns and the show room before he can hope to do business. Those whom you may envy have spent years of hard work and continuous advertising to gain their present position; in this way they have invested their capital year after year, until now they reap a continuous harvest.

There is one fact most apparent, and that is, the most prosperous in the business are the most persistent advertisers, having made their reputation by continuous advertising and fair treatment, they continue in same by never allowing their stock or their name to be lost sight of. Like the Light House by the Sea, whether fair or foul, dull or busy, the bright light shows on and on every night; its continuous presence is known from ocean to ocean, and its particular form to every man who travels the sea. So should you make your name known to succeed.

New York City.

T. F. MCGREW.

Barleymeal and cornmeal, equal quantities, scalded and fed warm, is not only recommended as a quick fattening food, but also as a solid flesh-producer, giving a finer golden color than any other system.

GREEN BONE AS A FEED FOR POULTRY.

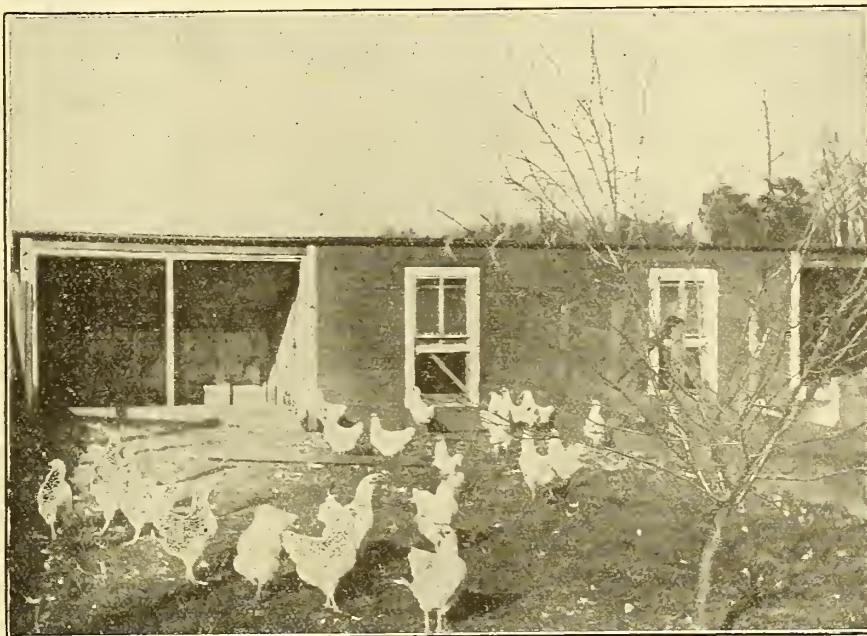

A Bone Bone Mill is a Necessary Adjunct to the Poultry Yard if You Desire Plenty of Egg in Winter.

Every keeper of poultry, if only a dozen hens, should have a bone cutter. Any old cutter is better than none, but the best is the cheapest in the end. Hens left to themselves, as they usually are, lay fewer eggs in winter than in summer. Why? "Because of the cold." Yes, but not necessarily. In summer they pick up quantities of worms, beetles, grasshoppers and other insects, together with tender shoots of grass, clover and other green stuff. In winter they cannot get these things. But raw bones, as they may be obtained at any market, with more or less gristle, tendons, meat and fat adhering, contain all the ingredients necessary to the formation of eggs, and are the best possible substitute for summer's worms and bugs. Consult your encyclopedias. You will find that "green" bones are composed of albumen, gelatine and fat—about one-third. Phosphate and carbonate of lime—more than

cut clover hay, cabbage, beet and other roots, and less grain than usual in winter, it affords a ration equivalent to, if not better than the natural foods of the warm season, and the hens lay as well in winter as in summer, if properly cared for.

Most marketmen dispose of this (to them) waste material wholesale at 40 to 50 cents a hundred pounds to soap, bone meal and fertilizer manufacturers, or give it away, and it contains many times the nutriment of an equal (nominal) value of corn, or any other grain. Every dollar's worth fed saves dollars out of the grain bill. An ounce a day to each hen is "about right," according to the size and activity of the birds. Never feed it tainted. Sickness might result.

Hundreds of successful poultry raisers testify that hens fed as above not only lay more eggs, but also that the eggs are more fertile, giving better hatches of more vigorous chicks, because the hens (and the cocks) are more vigorous, in better health and condition, and the eggs contain plenty of the material needed for the formation of the bones of the chicks in embryo, thus beginning at about two weeks old with small quantities cut fine,

A pen of Caneday's Pedigreed White Plymouth Rock Pullets as bred by Victor D. Caneday, Box A, Taylor's Falls, Minn.

five-eighths. Fluoride of calcium, phosphate of magnesia, soda and chloride of manganese and iron (oxide).

Now look for "Egg."—80 to 85 per cent of the white water; about 42 per cent of the yolk water; 15 to 12 per cent of the white albumen; about 16 per cent of the yolk albumen; over 4 to 2 per cent of the white saline; about 22 per cent of the yolk fat, including soda and a trace of sulphur; about 7 per cent oleic and margaric acid and phosphates of lime and magnesia, salt, coloring matter, and traces of iron, sulphur, etc., to balance.

The shell is mostly carbonate of lime, with a little phosphate of lime, traces of magnesia, iron and sulphur. ALL the essential elements of an egg abound in raw bone, but "bone meal," "animal meal," "scraps," and other "prepared" foods are almost wholly lacking in these ingredients. They are less relished by poultry and less digestible because less soluble.

Fed in proper proportion with such green stuff as fine-

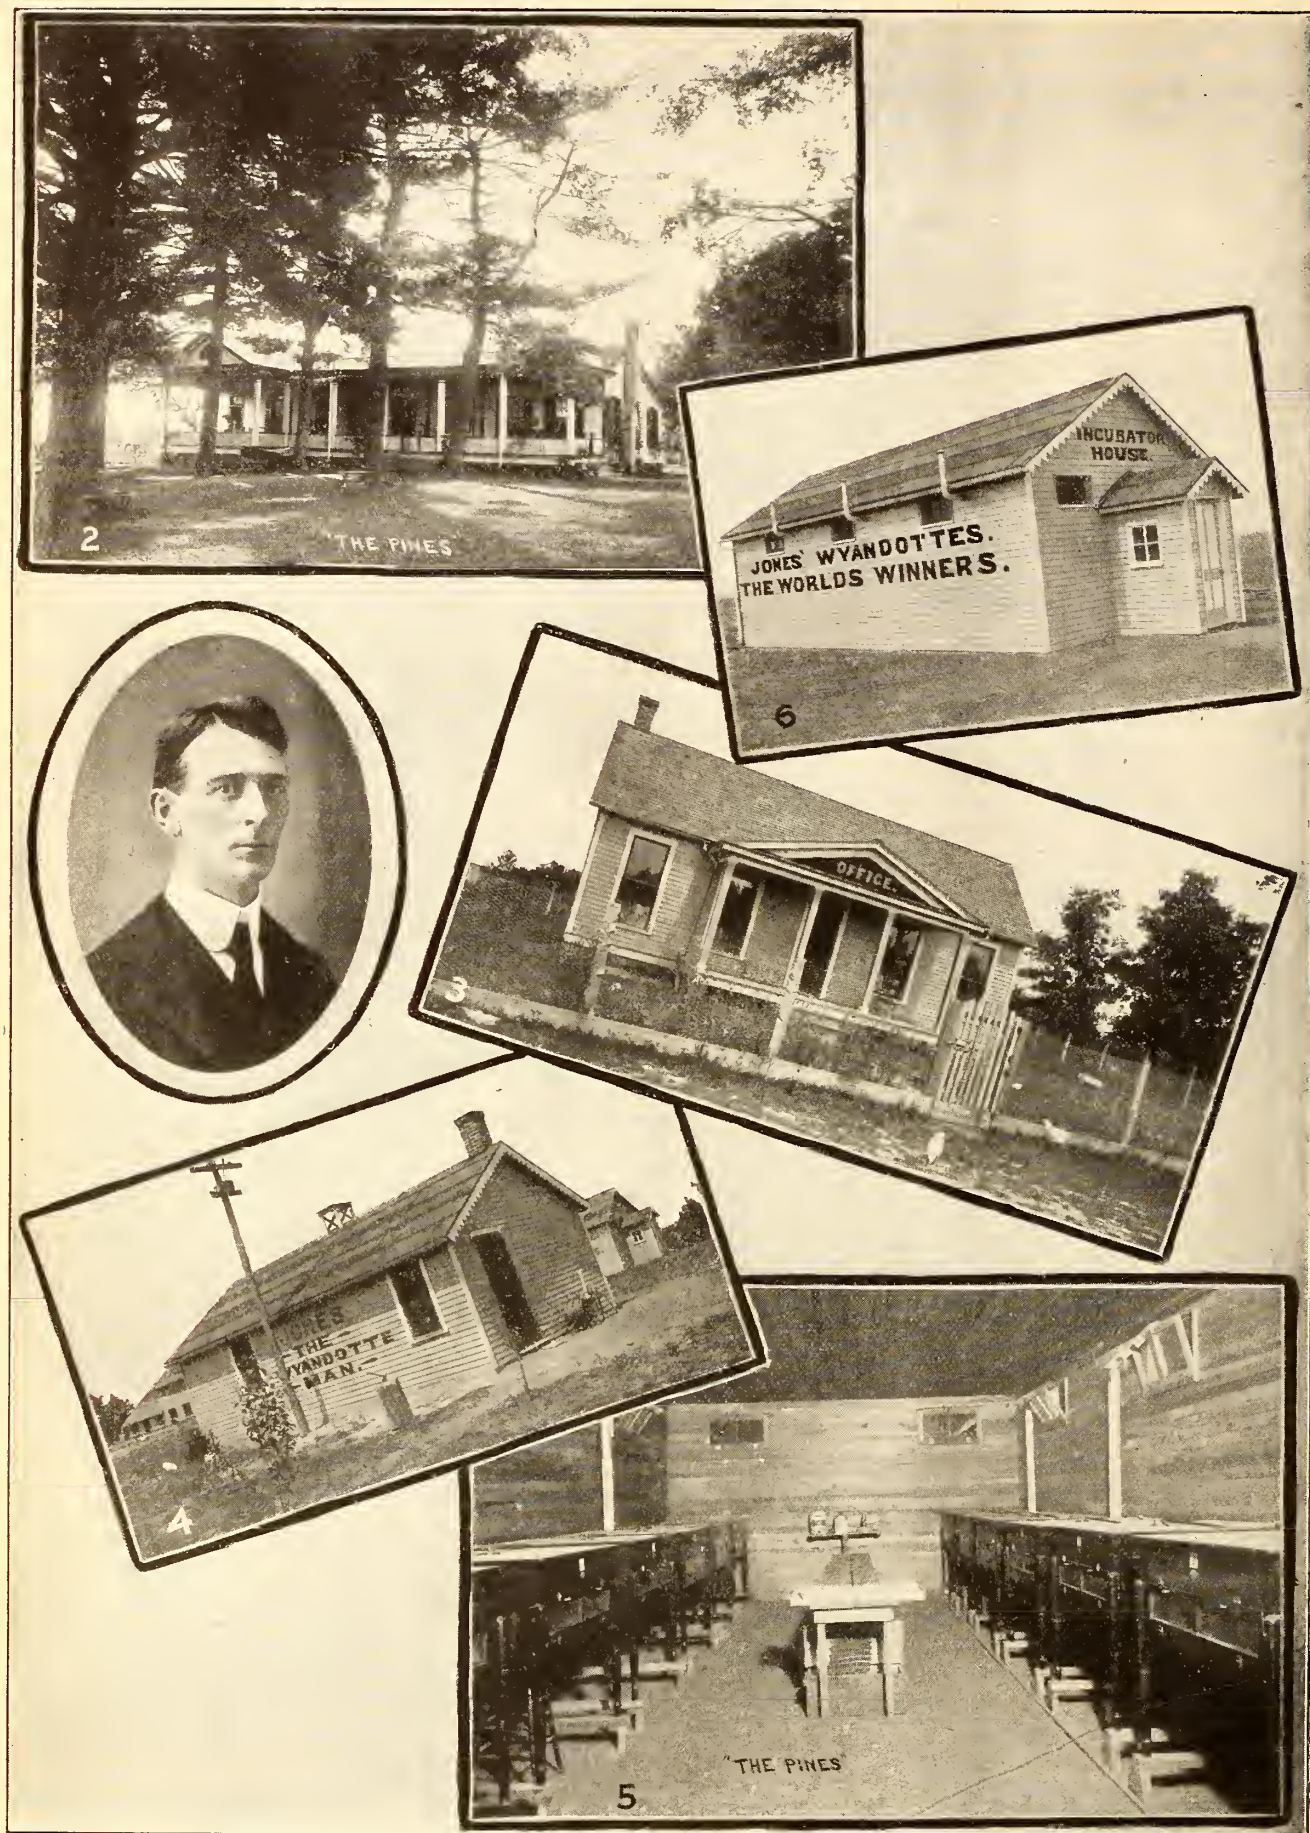

feed raw bone to the little fellows and see them grow. Broilers of two pounds weight at ten weeks old. Pullets laying at twenty weeks. This on the authority of our best breeders. Not only that these results can be accomplished by feeding judiciously with raw bone, but that they cannot be accomplished by any other means.

What we have said about raising chickens applies also to ducks, turkeys and geese. Raw bone contains in richer abundance, in more appetizing combination and at less cost than any other poultry food, everything required by fowls to form frame, flesh, fat and feather. Therefore, I repeat what I stated at the beginning. Get a bone cutter.

If you can't afford to get one, you can't afford to be in the business. It is not an expense, it is a positive benefit and a source of constant and increased revenue.

BOYERS BREVITY ITEMS.

Written by M. K. Boyer, Associate Editor American Poultry Journal.

A LITTLE EGG GOSSIP.

The first eggs from pullets come very irregular, but after they have rightly started pullets are excellent layers.

There is no better way to put a pen of layers out of commission than to give them a feast today and famine tomorrow.

It not only requires warm houses and good food to produce eggs in winter, but clean and dry quarters are equally necessary.

Hens or pullets should not be moved from one place to another more than is strictly necessary, as it is very apt to interfere with egg production.

R. G. Buffington says the most profitable part of the poultry business in New England is the production of eggs. The western states can supply our markets with poultry much cheaper than we can afford to produce it, but they cannot compete with us for fresh eggs.

Feeding for a continuous egg yield requires good judgment, and a great deal of careful watching in order to keep the flock in prime condition. A good laying strain of any breed, when in prime condition, will lay eggs regularly like clock work, but it requires care and constant watching to keep the machinery in order. Neglect and shiftlessness will upset the whole flock, and ruin what might have been made a good-paying investment, writes E. O. Roessle, in *Country Gentleman*.

According to a large number of analyses made of American eggs at the various agricultural experiment stations, an egg on an average weighs two ounces, and has the following percentage of composition: Shell, 10.5; water, 6.6; fat, 9.3; and ash, 0.9. A side of beef contains on an average about the same percentage of protein, but a larger percentage of fat. Eggs belong to the nitrogenous group of foods, and would naturally and quite properly be combined in the diet with material supplying carbohydrates (sugar and starch), such as cereals, potatoes, etc.

The *Oregon Agriculturist* says a plan for supplying the public with fresh eggs is being tried in Germany in the hopes that it will increase the demand for a strictly fresh article. Egg depots are to be established in the principal cities, at which the quality and freshness of the eggs will be guaranteed. For every bad egg the purchaser is entitled to get fifteen good ones. Every poultryman has to mark all eggs which he sends to one of these depots, in such a way that they can be traced back to him, and if it is found that he furnished bad eggs as fresh ones, he will not be allowed to sell to the depots.

At the California experiment station the chief object of the examination of eggs was to determine whether there was any basis of fact for the popular opinion that eggs with brown shells have a higher food value than those with white shells. It has been said by some that the brown eggs are richer than the white ones, but this statement is not borne out by a chemical analysis, and the physical examination proves that the main points of superiority, though extremely slight, are possessed by the white eggs. The minute differences that are found between the two groups are exceeded by variation between varieties within the same group. It may be stated that there are practically no differences so far as the food value is concerned.

ABOUT BROILERS AND ROASTERS.

The average epicure prefers white to dark meat.

The most attractive carcass is made by small bones and thick meat.

The roasting fowl's value is according to the quality of its breast meat.

Free-range poultry should be cooped at least ten days before being killed.

Generally the poorest time to sell poultry in a great city market is a week previous to the Thanksgiving and Christmas holidays.

Live poultry, especially spring chickens, sell best in the market, as very often the latter, when dressed, present a scrawny, bony appearance.

Our American breeds are specially noted for carrying a generous quantity of white meat, not only on the breast, but also well back between the legs.

For good meat-producing stock, select breeders whose legs stand well apart, with the body between of good width, with a tendency to put on flesh there.

Dressed poultry will keep longer, and present a much better appearance, if they are cooped for at least twenty-four hours before being killed, without food.

In shipping, always remember that a half dozen poor specimens, in a box of one hundred good ones, will ruin the sale of the latter as first-class carcasses.

Absolutely poor birds should not be sent to market at all with the expectation of realizing anything from them.

Considerable poultry that would have brought a good price if marketed alive, sell at a low price when dressed, on account of the slovenly manner in which they are prepared.

Drawn poultry will never become popular in our markets from the fact that there is more danger of the carcass spoiling when drawn than when not. Some years ago Massachusetts tried the experiment, but quickly went back to her former methods.

The fashion in dressing capons for market is to leave the feathers on the neck, from the head down two-thirds of the shoulders; on the two first joints of the wings; on tail and half way up the back; and on legs from knee joint two-thirds up the hips.

All varieties of Wyandottes are of great practical worth, but the White variety is accepted everywhere as being the practical fowl, par excellence, says the *American Agriculturist*. It is being adopted by the great market poultrymen more universally than any other fowl. Its white plumage makes it dress off in very handsome shape, while its dressed appearance is almost ideal for market purposes.

The *American Agriculturist* drops this valuable hint in catering to a family trade: Dressed fowls, which are nicely "plumped," and placed in new baskets covered with clean linen, are sold more quickly and at better prices than those that lack the neatness of packing and display. Plumpness appeals to the appetite, and neatness inspires confidence, both being important elements in working the provision markets.

THE FEEDING QUESTION.

Pea meal is nutritious.

Rice is easily digested.

Oatmeal has fully 5½ per cent of fat.

Wheat is rich in solids, but poor in water.

Barley is very nutritious, but rather laxative.

For nutrition oatmeal exceeds wheat or barley.

There are about 7 to 8 per cent of yellow fat in corn.

Green bone is not only a cheap food, but it is invaluable as a food and tonic.

Potato starch is very digestible. Potatoes contain about 22 per cent of starch.

F. L. Cooper claims that linseed meal is about the nearest perfect egg food for hens.

Green bone contains meat, blood, gristle, oil and mineral matter in soluble condition.

Properly-fed fowls are regularly-fed ones. Always bear in mind that a well-fed fowl is never over-fed.

There are about the same virtues in barley as wheat, or at least much of the same, for a poultry food.

Dr. Casey says carbon, nitrogen and lime are required by poultry. All three are found in green bone.

Kaffir corn should be more generally fed than it is. It has about the same nutritive value as Indian corn, and is better as an egg food.

If you have a regular hour for each meal, and live up to it, the fowls become accustomed to it and are punctually on the lookout for the feeder.

Col. E. O. Roessle says that what hens require principally is a balanced ration, and a regular, general feed. A feast one day and a famine the next will upset the best flock of layers ever gotten together. Once a flock can be kept in a prime condition on a certain feed formula, it is great folly to change.

Corn should not be entirely taken from the bill of fare. But under no circumstances should it be exclusively given, or made the bulk of the diet, unless in case of fattening for market.

F. L. Hooper gives this strong endorsement of linseed meal: Make use of a liberal supply of this wonderful egg producer, muscle grower, bone maker, flesh former, health promoter and digester, and a preventative of roup, indigestion and many other disorders of the fowl family.

L. E. Keyser says he finds buckwheat one of the best whole grain foods for hens. They never become cloyed on it, and it is a great egg-producing grain. In experiments made in feeding during the past winter, where the evening feed had been wholly of corn, he found that the substitution of buckwheat materially increased the egg yield.

The *Texas Farmer* tried an experiment: Of two lots of chickens of the same breed, of the same parent stock, and of the same age, running on the same blue grass pasture, one lot was fed on cut bone three times a week, and the other was not. Those fed on bone grew faster, developed more rapidly, and in every way were superior to those which were not. Green cut bone was found to have a decided tendency to develop combs and wattles, and make handsome birds.

WHITE PLYMOUTH ROCK COCKEREL.

Winner of first prize at Hagerstown, Md. This bird was hatched from eggs sold by Mr. D. T. Roots, Connerville, Ind., and is now owned by Mr. Roots, he having purchased him from the breeder to whom he sold the eggs.

BLANCHE ELDER EDDY,
Notary Public.

GUARANTEED SUBSCRIBERS.

To our subscribers the display advertisers of the American Poultry Journal are guaranteed; that is, if any advertiser using display space in these columns is proved to be a swindler, the American Poultry Journal will make good to the subscriber the amount lost. We do not guarantee that men in good standing shall agree in their opinions; we do not guarantee nature against infertile eggs, but we do agree that in case a downright swindler succeeds in swindling a subscriber, we will reimburse that subscriber and publish the rascality of the swindler. We ask, in consideration of this guarantee, that our subscribers, when writing to an American Poultry Journal advertiser, say, in every case, "Saw your ad in the American Poultry Journal." In no case will this be to your disadvantage, while in many cases it may serve you well. In either event we shall be obliged to you.

Rejudging Shows.

The editorial, "Rejudging Shows," which appeared in the AMERICAN POULTRY JOURNAL, December issue, has received the hearty approval of a very large number of breeders and exhibitors, their endorsement of the position taken by the AMERICAN POULTRY JOURNAL being most firmly and cordially expressed.

In a letter to the editor of the AMERICAN POULTRY JOURNAL Mr. Henry Trafford, editor of *Poultry Success*, thus endorses the position taken:

I desire to especially congratulate you upon your editorial entitled "Rejudging Shows." You have certainly sounded a popular chord and have earned the proud title of being the pioneer of public opinion in a most delicate and at the same time very important matter in poultry journalism.

Mr. E. W. Rankin, editor *Poultry*

Herald, in a vigorous article in the last issue of his journal, takes a like position with the AMERICAN POULTRY JOURNAL.

In addition to the testimony of these two gentlemen, who are in close touch with a vast number of annual exhibitors, we have that of numerous breeders and showmen to the effect that the position taken by us is the right one.

Mr. Edwin M. Morris, Sparkill, N. Y., "dissents from the finding of the court." In a letter to the editor he reviews at length what he considers an editor's duty. He wants the editor to be "fearless," and goes so far as to seek to impose upon the editor of a poultry journal the duty of righting the errors and injustice found within the poultry business. Mr. Morris says:

There is a mission for the poultry press of this country beyond the dissemination of advertisements, with the dry bones of official show records. It is easy to put money into the hen business, and this is made more easy by the publication of many papers, some of which never consider that there is a great corps of amateurs that is looking for a means of getting some of this money back, others doubting whether the stock they have been induced to buy was worth the money, or in plain English, whether they have not paid an excessive price for inferior stock. Some of these exhibit and fail and nothing is to be found that they can understand to explain the lack of success, and it is then that their suspicions are confirmed and they go out as quickly as they went into the "hen business."

Critical reports not only enlighten this vast army, who should remain with the fraternity, but beyond this they are one means of preventing promising judges from getting carried away with conceit, others who through some means have been appointed to judge and who have not the eye, mental capacity or equilibrium to become capable, competent judges, from budding, blossoming and doing more evil in a short time, by bad decisions, than a specialty club can undo in a decade.

Our correspondent, it is very evident, has not grasped the idea which the AMERICAN POULTRY JOURNAL thinks it clearly set forth in the editorial last month.

And this brings us again to the point of starting. The AMERICAN POULTRY JOURNAL still reserves the right to exercise its own judgment along the lines of legitimate criticism and freely accords to others this privilege. But that is not the question at issue. The question is whether or not the fancier who makes a winning under a competent and well known judge shall be deprived, in a measure, of the benefits, financial and otherwise, which accrue because of that winning, by reason of the representative of a poultry journal stating in his columns that the bird or birds thus winning were inferior to certain competing stock, and therefore, not entitled to the place accorded by the judge. That is the question. It is an important question, too, and one which must be settled, and rightly settled, very soon. Men's reputations as breeders and exhibitors, as well as their business interests, are being injured by this so-called rejudging of classes at the leading shows. Such a condition can not long exist, because the American fanciers, as a whole, are decidedly in favor of fair play.

Regardless of the findings of the fault-finders the large majority of the men who are officiating as poultry judges are honest and competent. That the model of perfection of each of the various breeds of poultry must be the individual creation of each of these men, and not one collectively constructed and maintained, is a fact which all critics should never fail to realize. Men differ

as to what constitutes merit in show specimens in the poultry room as men differ in all else in this world. Men's individual tastes, conditions under which specimens are shown, the condition of the light at the time of judging, and much more enter into the finding as recorded by the poultry judge.

Then, too, it should be borne in mind that men do not interpret alike the Standard of Perfection. Especially is this true of that portion of the standard describing that which no man has ever yet beheld—a perfect fowl, as to shape.

There is, virtually, a contract existing between the exhibitor and the poultry association under whose auspices he shows. The exhibitor is apprised of the names of the judges who pass judgment upon the stock entered. It is becoming a fancier and a gentleman to abide by the decisions of these judges, to accept their judgment as final so far as the awards of any given show is concerned. And it can be said to the honor and sportsmanship of American exhibitors that this is the settled rule of action. Protests against the judgment of judges are about as scarce in the American show room as hen's teeth. This clearly shows the confidence the exhibitors place in the honesty and ability of our well known judges, and more than all else shows conclusively that the self-imposed judge, the uncalled and unauthorized reviewer, who sets aside honest and capable men's judgment, has no mission to perform that is in the interest of the exhibitor or the cause of standard-bred poultry.

The question as to whether or not the American Poultry Association should in any manner whatsoever hold supervision over the appointment of judges is not up for consideration in this connection. It might be well for the American Poultry Association to hold fraternal relationship with the poultry judges, but that is a question entirely by itself.

The New Standard.

More than thirty years ago, the American Poultry Association worked out the first issue of the Standard of Perfection. There has since been word revisions again and again. Once a feeble attempt of picture portrayal of form was attempted. It had hardly begun when it was abandoned and the edition withdrawn. This abandonment was by many regarded as a step backward. All now agree. The new book will contain a word and picture description of the ideal male and female of all or nearly all the varieties of American, English, French, Dutch, Polish, Mediterranean and Oriental poultry.

The work was commenced at Chicago in 1901. The committee on revision then appointed reported at Buffalo in October, 1901. It was publicly stated in the meeting that the old book contained more than one thousand mistakes: descriptive, grammatical and typographical. More time was asked for and the coöperation of those who had discovered errors, requested. We understand all members of the association were directly communicated with immediately afterward and urged to comply with this request.

The proposition of an Illustrated Standard was introduced at this same

Buffalo meeting. The president urged its necessity showing the difficulty of accurate description without it. He announced it as his opinion that the cost of such a work would not be less than \$15,000 and that three years would be required for its completion, but believed five thousand purchasers would want it the first year after its publication who would be willing to pay five dollars per copy.

On motion, a committee of three was appointed to take into consideration the suggestions of the president, with instructions to report at the next annual meeting. At Charleston, January, 1902, the revision committee reported they had received very meagre responses to their very many requests for suggestions as to needed changes in the Standard. They recommended that all changes of the Standard be brought about through the work of specialty clubs. After much discussion the matter was referred back to the committee. The committee on Illustrated Standard submitted a report. And such a report! Its reading surely must have dropped with a sickening thud upon the hearing of those in favor of illustrations. It is a wonder the whole scheme was not then abandoned. The report said: "We doubt very much the advisability of this association shouldering the responsibility of publishing an Illustrated Standard. The time is at hand for such a book, at the same time, it should not be sent forth as the absolute law as to shape and color. It might be possible to have some publisher issue an Illustrated Standard and pay to this association a royalty. This association should have full control of what goes into the book and hold the copyright. At the same time, we should continue to issue the Standard in its present form and make sales the same as we have always done."

Think of it! An Illustrated Standard which should not be a standard as to shape and color! Surely, it was reasonable to doubt the advisability of the association shouldering the responsibility of publishing such a work; but some publisher might possibly be found who would issue this non-Standard Illustrated Standard, while the association was continuing a competing business of issuing and selling its Standard. But little consideration to the report seems to

have been given by the meeting. They went into a discussion upon an illustrated Standard. Extended remarks were made upon the subject by nearly all present. The president was in favor of having the old committee continued with power to make contracts and repeated again his estimates of cost at Buffalo meeting. A majority were at first opposed to the clause that gave power to make contracts to the committee, but on the assurance that only a start could be made this year, and that only progress could be reported at the next meeting, all opposition was withdrawn and the old committee was continued with power to act and report at the next meeting.

The revision committee and the illustrated standard committee were combined by vote of the association at Hagerstown.

It was at the Cleveland meeting the winter of 1902 and 1903 such action was taken by the association as made it possible for the work of revision and illustration to be commenced. We are all familiar with the work at Buffalo in May, 1903, and the subsequent action of the association at Rochester in 1904.

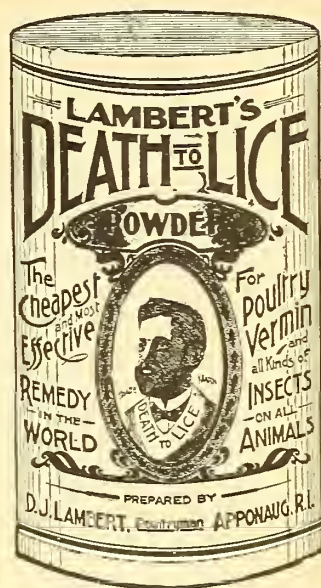

One full year had been used up in the partial preparation of the matter for the printer. We say partial preparation, because it must be remembered many things were referred to the committee on publication. But few illustrations were finally accepted. Many were referred back to the artists selected for slight changes. The number was increased entailing much additional work.

Has there been an unnecessary delay in bringing this task to completion? Yes, we believe it. Has there been so much of labor required to create the grand success which now seems so well assured? Yes, we believe it.

Remember it took two years for the American Poultry Association to make up its mind that it really wanted its Standard revised and illustrated. Do not forget that many were crying out against what they termed "the everlasting tinkering with the Standard." Bear in mind that many opposed illustrations and many others doubted the advisability of the association assuming the responsibility of the expense. It has taken many conferences to reach a conclusion as to the doing of the thing at all. After this, it has taken much of consultation to agree upon the details. We often speak of what has been done as the work of the committee. Far from it. It is the work of the whole interest as gleaned and interpreted by the committee and ratified by majority vote of the association representing the interest.

The unnecessary delay has been in the apathy of the fraternity. Happily, that is past and those who were slow in coming forward at the first are clamoring for haste. There would be much to fear in this clamor were we not assured that those in charge will not be affected thereby to allow poor work. They well know that the great majority demand good work and will not be content with anything but the best. A few months' waiting will amply compensate for the assurance of ideal results.

We should keep before us that it is not enough to agree upon the rules in advance to make the game worth

I WISH THAT YOU COULD SEE

Some of the birds that I have to judge at the fall fairs and winter poultry shows. They are often swarming with vermin, but their owners would be shocked if you even intimated any such condition. The webs of the feathers are sometimes eaten by lice. Some birds are thin in flesh, others are listless and unattractive. Many of these are high priced, well bred specimens, valuable enough to use a cart load of Death to Lice on, if need be, to keep them clean.

I WISH THAT ALL BIRDS

Could have the benefit of Death to Lice every few days during the show season. It is not from the fact that they have this powder on them that they score more, but from the fact that they are always in better condition by being frequently dusted with it. It requires only a few minutes to dust a dozen or two, when they are cooped for preparation or show. Grasp the bird by the shanks, head down, and sprinkle a little of the powder among its fluffy feathers, especially just below the vent. No need to go over the entire body unless you wish to, the lice center in the fluff.

I WISH THAT I COULD

Visit every fair and poultry show in this country and dust every lousy bird in the show. I think I could then convince every exhibitor of the value of Death to Lice. I could make the birds look and feel better immediately. I could make a customer for Death to Lice of every one present. A bird that is worth anything is worth using Death to Lice on to keep him clean. A ten cent box will treat ten birds. A twenty-five cent box, thirty birds. A 50c or \$1 box will last all season and be good as long as it lasts.

5-oz. size 10c at dealers, by mail 15c.
15-oz. size 25c at dealers, by mail 40c.
48-oz. size 50c at dealers, by mail \$1.
100-oz. size \$1 at dealers, or by express collect.

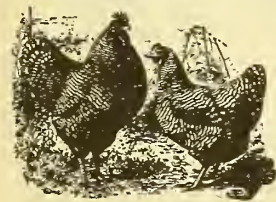

We also have an "Ointment, Special and Liquid," if you need them. Book which we mail free will tell you more. Send for it now.

playing. They should have an object. If this object be a worthy one and of great human interest, so much the better.

Can we not best afford to throw aside haste and carefully and conscientiously play up to them?

We have as yet failed to notice any mention made of the women fanciers at St. Louis whose birds won creamy blues in this driving competition. There were any number of women fanciers at the show, and many more that will be fanciers from its effects. We saw one good woman part with a nice roll of real lucre for a pen of her choice of fowls. She has the making of a good fancier and breeder in her soul. All it needs is a bit of kindling. In the Barred Rock classes one woman from Missouri came, saw and conquered—where she won first prize on hen over the greatest breeders of the day. Another New York woman fancier won an honorable share of the prizes and sold some specimens at long prices. One woman sent birds from Massachusetts, one from Indiana, plenty of them from Illinois and Missouri, one from Kansas and a dozen others all came in person or sent birds. The field is roomy and times are mellow for more women fanciers; let their number increase.

* * *

At this season of the year when high prices and low temperature prevail, the practical poultryman wants eggs and plenty of them. Naturally, therefore the question uppermost in his mind at present is how to feed the hens in

order to increase the egg production. The entire problem in a nutshell is this: Give your fowls summer conditions in both food and surroundings, as far as possible, and results are sure to follow.

Of course the poultry house must be free from draughts, the hens properly supplied with clean water, charcoal, grit, and green food in some form. But the essential part of the feed, the part that must take the place of the bugs, earth worms and insects of summer, is the meat or animal diet. This has now come to be almost universally supplied in winter time by cut green bone.

The poultryman who tries to get along without a bone cutter is losing both time and money. Experience has proved it to be true that a bone cutter in the hands of any poultry raiser will pay for itself in a comparatively short time. A machine of any standard make can be made to add greatly to the profits, especially when bones are so easy to obtain at a cost of only a trifle.

* * *

There are some people who know how to make things interesting—others make them less so. One who belongs to the former class is Professor Rice, of the Cornell School of Poultry Culture. In the program given to the students and others who cared to attend the lectures, were interesting talks by Professor Bailey, N. V. Witbeck, T. E. Orr, W. B. Mack, Henry Van Dresser, Prof. G. S. Hopkins, F. G. Thayer and Mrs. Allen. Topics handled by these talkers included

the relation of pure-bred fowls to the farm, judging Leghorns, judging American classes, running a hen farm, raising broilers, poultry keeping for women, poultry buildings, roup and a question box. F. E. Dawley is director of farmers' institutes in New York and under the state board's auspices this real poultry institute was held. Room enough and to spare for thousands of meetings like this the whole country over.

* * *

The Australian Hen, Sidney, New South Wales, Australia, says that the fanciers there can not be so far behind the times when "so prominent and influential a journal as the *AMERICAN POULTRY JOURNAL*" gives their newly tried and much liked score card kindly consideration. The Australian fanciers are a progressive set of fellows, and are now prominent in the eye of the poultry world by reason of their practical egg contests, in which fanciers of America are deeply interested. And it can be said that in the *Hen* the Australian fanciers have a most able and helpful advocate.

* * *

Fanciers want news of that new Standard and that's what J. H. Drevenstedt is now putting out. "The work was completed as far as human beings can do it, on Monday, December twelfth, nineteen hundred four. The first one hundred and twenty-five pages of copy are at the printer's." This is, indeed, business like. The additional sketches for the work, which were assigned to Sewell for drawing, are what has caused the delay, and no specific contract for

Special Machines For Special Purposes

In addition to the regular *Prairie State Incubators* we make special machines for special purposes; for ducks, geese, etc. Herein we illustrate the *Prairie State Special No. 288 Duck Machine*, built to meet the requirements

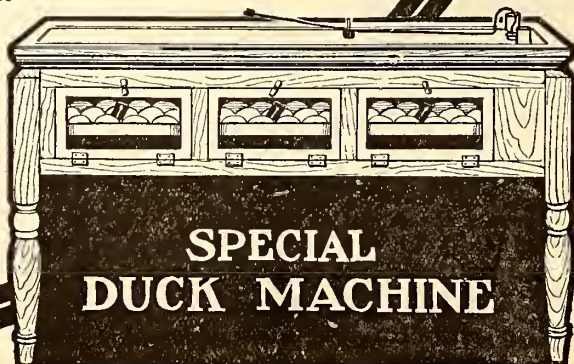

of those who raise ducks exclusively or on a large scale, and want a machine that is reliable. The same approved general principles of construction employed in our regular

Prairie State Incubator

have been followed with slight modifications, especially in the matter of ventilation, to meet the requirements of duck eggs. The egg tray and egg chamber are deeper than in the regular hen-egg machines, and there is more room in the nursery. Has capacity for 288 duck eggs. May also be used for hen eggs, with a capacity of 400 eggs.

The specialist will find our special machines for special purposes "just right." Write for illustrated catalogue describing our full line of machines and supplies. *Prairie State Incubator* is winner of 385 first prizes.

Prairie State Incubator Co.
Box 468, Homer City,
Pa.

**SPECIAL
DUCK MACHINE**

their completion was made to hasten their execution. Only thirteen sketches remain to be finished by Mr. Sewell, which is encouraging. From the way the committee is working we shall have the work for late matings. Let the good work proceed.

* * *

The *Australian Hen* is so interesting each month that we cannot refrain from saying a thing or two about it. We note in its November issue that a number of American breeders have advertisements in its columns. This is doubtless profitable to them and goes to prove that the American invasion of foreign countries does not exclude the American hen. Also in this issue we note a half-tone of "The Turner Trophy," a handsome silver base supporting a slender shaft of the same metal, on which is a silver egg. The egg is embellished with a miniature basket of eggs and two laying hens. The trophy goes to the breeder of the pen laying the highest value in eggs in the New South Wales laying competition, and was presented by Mr. C. J. Turner, the leading Australian auctioneer of pure-bred fowls.

* * *

The secretary of the Minnesota State Poultry Association, Mr. C. L. Smith, is attorney for the Hennepin County Commissioners and a prominent legal light of the state. Governor Van Sant has appointed him judge of the Municipal Court of the city of Minneapolis, and he is to assume the duties of office about January 1st. This calls to mind that we have many men in the ranks of fanciers who have been highly honored

in other walks of life. For years it has been a great joke in the West regarding the recess taken in the Supreme Court of Nebraska to allow its Chief Justice, Hon. T. L. Norval, to attend a large poultry show.

* * *

The *American Fancier's* front page for the December seventeenth issue contains the best sketches of Lakenfelders we have yet seen. The male is especially good. His pose is good, indeed, for the observant poultry fancier can note the expression of eye in the various poses assumed by males in his own flock. Arthur O. Schilling made the sketches and they are the best he has ever done. This artist's work is freer as his work goes on, and it possesses a nice gracefulness at the same time. This artist has a few sketches in the forthcoming Standard.

* * *

To take a serious view of the situation: Had not the American Red breeders and those breeding Buckeye Reds better get together before they appeal to the American Poultry Association for admission of their favorites in January at Minneapolis? The Rose Comb Rhode Island Reds will also apply for admission. Why not the Pea Comb Reds, too? And while mentioning Reds, why overlook John L. Costs' Red Indians who meet at Hagerstown every little while?

* * *

Texas has got her ears pricked up over the dark horse she sent to St. Louis, who won first on Single Comb White Leghorn cockerel. We rejoice with Texas, too,

because she won in hot and honorable competition, but from now till further notice that southern gentleman, McReynolds, the czar of the southern fancy, will never get over it. Spirited editorial and facsimile cuts of the cheek this bird brought will help to wake up the southerners. We knew all the time that the glorious South could make good, and like the little red hen, she did!

* * *

Some one should write a very interesting story of the life and work of Mr. Frank B. White. Here is a man who has done much for good advertising; he stands up for progressive poultrymen; he is ever at work for the good of the fancy and poultrymen generally, and if the kind words we have heard amount to anything he is held in great esteem by many of the breeders he has personally met, and those he has talked to through the press. It's his energy and good sense that we fanciers like—let his, like Abou Ben Adhem's tribe increase.

* * *

Latest advices from Port Arthur—excuse us, we mean Australia, are to the effect that Mrs. Hansel's American hens are now ranking third in place in the International laying test at the Hawksbury College. These Rose Comb Brown Leghorns are but nineteen eggs behind the pen of Australian Golden Wyandottes, heading the list with 693 eggs to their credit for seven months. Other American pens of hens are about where we last reported them.

* * *

Among women who are doing things in the poultry world is Mrs. U. R. Fishel,

LEARN TO RAISE POULTRY

If you raise poultry, "do it right." Make it pay as it should. Learn to avoid costly mistakes. Conduct your yard, large or small, on established, money-making principles. Poultry Culture can be made to pay bigger dividends in proportion to investment of time and money than any other branch of farm industry. It offers equal opportunities to women and men.

Complete success comes with thorough preparation. Our correspondence course of instruction will make you an expert. The lessons are sent regularly to your home. The benefits are immediate. Each student is taught individually. You can begin any time. **Now is the best time.** Our teaching is an unqualified success.

We make a business of placing graduates in good paying positions. No charge for the service. Many fine positions open at present. Qualify yourself for one of them.

Write for interesting free literature.

COLUMBIA SCHOOL of POULTRY CULTURE
Box 715, Waterville, N. Y.

PROFITABLY

who has recently bought the stock complete of Mrs. B. F. Hislop. Some reports say that Mr. Hislop made the sale, but his good wife was the turkey raiser, so we thusly give her due credit. Mrs. Hislop has won many blues with this flock for years, and Mrs. Fishel can be congratulated on securing them. We wish her unbounded success.

The truth of the matter is this—Dr. J. J. Hare deserves the support of every Buff Cochin breeder in America in his efforts to reorganize the fanciers of this noble variety. If the Doctor takes hold of a thing it is sure to move; and Buff Cochin breeders had better join hands and help him push the variety to the fore front now, for sooner or later they will have to "come in out of the wet."

Where are the officials of the National Poultry Judges' Association. This association was to have been organized at St. Louis during the late show, but in hunting for it one would get lost. No doubt but what the organization could do great good in getting the judges together on scoring or general work. The judges need to wake up and make progress with the balance of the fancy.

The English fanciers are becoming more and more in love with the Wyandottes. At the International show, held in London last month, a Partridge Wyandotte cockerel was sold for £165, equivalent to \$825, our money. In the laying test conducted by a club of national importance more White Wyandottes are entered than ever before, and lead all entries. These facts are gratifying to the American admirers of the Wyandotte.

Mr. E. W. Rankin is being dragged forth by his friends as the next president of the American Poultry Association, and as precedent says that he shall be selected from the state in which the annual meeting is held, why not Mr. Rankin?

The fact that one variety breeder went to St. Louis and carried off over \$1,000 prize money, mostly on odd varieties, should stimulate more to the same thing. To split this money up in four or five parts for as many breeders would do no harm. Let others get after some of it. Why not?

At Brockton, Mass., the Young Men's Christian Association is giving a series of lectures on poultry culture. Every two weeks during winter a specialist in some branch of the industry is to lecture on a topic which is posted in advance. This is only another method of turning the tide back to the land.

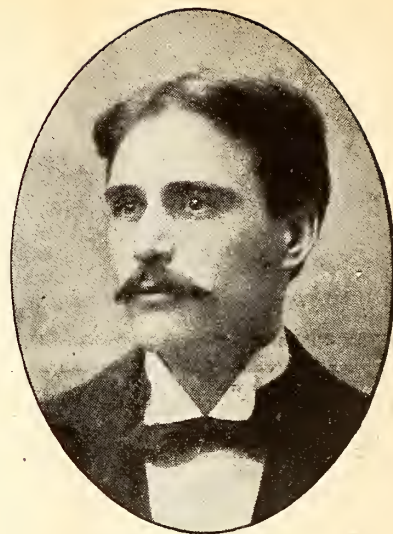

The Studebakers, of South Bend, Ind., of wagon and carriage fame, are starting a poultry plant of immense size, and the genial Mr. Frank Ashley has been placed in charge of it. They are adding some of the established breeds to their list and are only putting choice birds in the foundations they are building.

Thos. F. Rigg gives notice that an amended article of the Constitution of the American Poultry Association will be presented at the next annual meeting, the gist of which is not to limit the salary of secretary to \$300 per year.

In the minds of the fanciers who saw it the St. Louis show becomes better every day. Time will remove a great many imaginary short comings of this great exhibition.

One exhibitor who won a prize at the St. Louis show advertises that he has several hundred birds at home, for sale, "Just as good" as this one. This is a splendid sample of injudicious advertising.

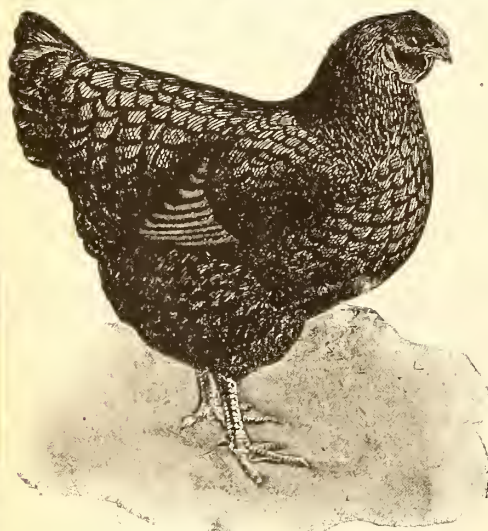

The next president of the American Poultry Association will be, as each of his predecessors has been, the Rankin' officer.

Wm. A. DeBold.

We take pleasure in presenting to our friends a portrait of Mr. Wm. A. DeBold, our special artist, who makes the paintings for our colored frontispieces, the latest appearing in this month's issue. Mr. DeBold is now recognized as one of the foremost poultry artists in the business.

As a boy, he was a lover of pets and a breeder of fine poultry, having enjoyed quite a reputation in his community. He did not take up the delineation of poultry, however, until recently, although a natural born artist (having displayed remarkable talent at five years of age). He was always busy with other affairs, and is at present a member of the firm of DeBold & Wolf, Engravers, of Peoria, Ill., better known to the trade as the Peoria Engraving Co. Their business is the making of fine printing plates, halftones, zinc etching from line or pen drawings and fine color work. They make a specialty of high class cuts for

JONES "THE WYANDOTTE MAN"

With more and better birds than will ever be found at "The Pines," Paducah, Ky., U. S. A. This is the original Jones, "The Wyandotte Man," formerly Edinburg, Ind.; you know the kind he breeds.

STRONGEST BLOOD LINES ON EARTH

This fact has been proven year after year for the past ten years by a long list of winnings at all the leading shows of the country, at such exhibits as the St. Louis World's Fair, New York, Chicago, Indianapolis, Springfield and numerous other large shows, besides furnishing many of the winners at the largest shows. What other breeder ever furnished four first winners at the largest Chicago show ever held? I can furnish you birds that will win in any company. High-class breeders in pens, trios, pairs, single or any number. I can supply your wants in

Silver, Golden, White Wyandottes

G. S. and S. S. Bantams. I have no over-stock, nor do I need the room, but I have now on hand and ready to ship

1000 Choice Selected Birds to Sell 1000

When I say this I mean that there is not a bad bird in the lot, not a bird but has the blood of the noted winners of the world in his veins. I have no cheap birds for sale at any price, but I have a grand lot of good birds for sale cheap.

Eggs for hatching after January 1st \$3 per 13, \$5 per 26

Send for the elegant illustrated catalogue. A book that tells you all about Wyandottes, how to breed them, with illustrated articles on mating; a book worthy a place in any library. Send 4 cents in stamps for mailing.

GRAND KENNEL OF SCOTCH COLLIES

with the purple blood of the Collie world. Puppies, Brood Bitches and Stud Dogs always for sale.

R. E. JONES

R F D 5, "The Pines," Paducah, Ky.

stationery heads, catalogues, inserts, etc., and have built up a business and reputation which places them in the front rank of plate makers.

No better color work of fowls in their natural colors has ever been done than the illustrations that have appeared in AMERICAN POULTRY JOURNAL from time to time, the work of Mr. DeBold, and we take great satisfaction in presenting to our readers a magnificent frontispiece in this issue of a pair of White Wyandottes from the yards of J. C. Fishel & Son, Hope, Ind. We propose to give our readers absolutely the best in everything, sparing no money or pains to do this, and believe that we are especially fortunate in securing for our readers this work from the hands of Mr. DeBold.

Two elements of success that contributed to this masterpiece were the splendid specimens of fowls from the yards of J. C. Fishel & Son, and the fact that Mr. DeBold is a thorough artist as well as fancier, and appreciates the value of giving correct representations of good stock. The need of a good artist in this line of work has produced a man in the person of Mr. DeBold who can satisfy the critical tastes of breeders and the readers of AMERICAN POULTRY JOURNAL.

The color printing of this picture was done by the Photo-Chromotype Engraving Co. of Philadelphia, Pa., who are, without doubt, the firm best fitted in this country to do the highest grade of work, as is clearly shown by what they have done in this case.

The Chicago Show.

The Chicago show is now uppermost in the minds of the breeders of the country. Never in the history of this organization has the management reported more interest at this time in this

breeders and exhibitors of poultry, pigeons and pet stock alone, but manufacturers of all supplies and appliances that go with successful poultry raising have secured space for their exhibits, which contribute largely to the interest of the poultry show and serve as well as an object lesson to hundreds of beginners who at such a time receive the inspiration to become fanciers.

The premium lists containing a record of liberal prizes offered on the different classes have been sent out and if any have been overlooked in this distribution, a copy can be secured by writing to the secretary, Fred L. Kimmey, room 500, 325 Dearborn St., Chicago, Ill.

The management invites entries from breeders all over the country and earnestly solicits their co-operation in making this one of the best shows ever held. There is no better place than Chicago for a breeder to make a record with winnings and establish his business on a strong foundation of awards secured in close competition and under conscientious judging as at Chicago.

Special Features of American Poultry Journal this Month.

The progressiveness of the fanciers and manufacturers of America is publicly demonstrated in no better way than through the liberality based upon good business principles with which they patronize the poultry journals of this country, showing their appreciation of the value of printers' ink and publicity in disposing of their stock and manufactured articles. This was never better demonstrated than in this issue AMERICAN POULTRY JOURNAL with its special features of a colored plate and the other beautiful illustrations.

Every line and page of AMERICAN POULTRY JOURNAL shows the spirit of the fancier and manufacturer, and the publication of this issue with its especially fine features is made possible by their confidence in the well established and tremendous business of the poultry industry in America and the ability of AMERICAN POULTRY JOURNAL to bring a share of this business to them.

A change in the design of the front cover showing a pair of white Plymouth Rocks to take the place of the pairs of White Leghorns that has been running for a year, marks the first number of volume 36.

The colored illustration is a work of art and speaks for itself without any argument and marks the step ahead that the poultry business is constantly making. The illustrations of fowls and poultry yards make a record that places the poultry business in the front rank of all great industries.

Many yearly subscriptions to AMERICAN POULTRY JOURNAL will expire during the next few months and many more are taking their place. With the full confidence to believe that we are giving our readers more than value for the price of the subscription, we ask for a renewal and the continued patronage of all our old readers. The expiration date of all subscriptions is printed on the wrapper. This can be looked up and by sending in a subscription before its expiration there will be no danger of any subscriber being cut off the list at expiration and losing an issue of AMERICAN POULTRY JOURNAL.

Many farmers allow their young turkeys to run in the stubble fields. They not only pick up a great deal of loose corn, but often get dainty morsels of green stuff, besides which they have plenty of fresh air and exercise.

Fowls that do not readily respond to fattening food, have a weakness that needs to be looked after.

NOW IS THE TIME

to bind up the past year's magazines before they are lost. The C. J. Farwell Co., 61 Plymouth Pl., Chicago, is the place to get a good job cheap. Write for prices.

BLACK BREASTED RED GAMES

I make a specialty of breeding Black Breasted Red Game birds—the exhibition kind. Good layers, fine mothers, best of table fowls, large, long legged, showy kind. Been in the business 12 years. Can furnish choice cockerels, \$3; choice pullets, \$3; pair for \$5; trio, \$7. Eggs, \$2 per sitting of 15. If fail to hatch as many as ten chicks will duplicate order for \$1 for 15 eggs. Satisfaction guaranteed. Write me. I have plenty of stamps.

ORVILLE D. CHINN, Keohoe, N. Y.

Barred Rocks Exclusively

I have not exhibited them this season, but they will for my customers. Choice breeding stock for sale. Mention just what you want.

coming event. Unless all signs fail, the most successful show that Chicago has ever held will be pulled off at the Coliseum Jan. 23 to 28, 1905.

This interest is not confined to the

MANAGEMENT OF INCUBATORS.

Advice on the Management of Incubators and the Advantages of their use.

The most common causes of failure in artificial incubation are from faulty eggs. Perhaps that is always the cause of failure when instructions are strictly followed and the incubator is operated under proper atmospheric conditions. Eggs may be totally unfertilized, or so weakly fertilized that hatching is impossible. They may be too old or have been kept at too high or too low temperature, and from not having been turned properly or frequently, the germ may be attached to membrane, which will surely prevent hatching. Very great differences in size are objectionable, especially where the egg chamber receives its heat by radiation from a hot tank above it, which is the method in every make of incubator but one, the reason being that there is a much higher temperature at high levels than at lower level in the egg chamber.

The ideal place for an incubator is one where draughts of air are absent, where there is always a great difference between the room temperature and that required in egg chamber, and where the difference is strictly maintained, and where the humidity of atmosphere remains as uniform as possible in spite of change in atmospheric conditions outdoors. These conditions are usually best realized in a well insulated, clean and dry cellar, wholly or partially below the ground surface. By well insulated cellar, I mean that the walls must be thick

enough and of such material or manner of construction that conduction of heat is prevented. We have operated an incubator of the no-moisture type with fine results, in an upper room of a dwelling house, in February, March, April and May, but in the hot weather of June and July, in same incubator and same room, we hatched only 38 per cent, when hens were hatching nearly every egg from the same sources. Every incubator yet invented depends for its ventilation on the difference between outside and inside temperatures, so it is folly to assume that a reasonably equal ventilation results when the difference is below 50 degrees and 103 at one time and between 95 and 103 at another time.

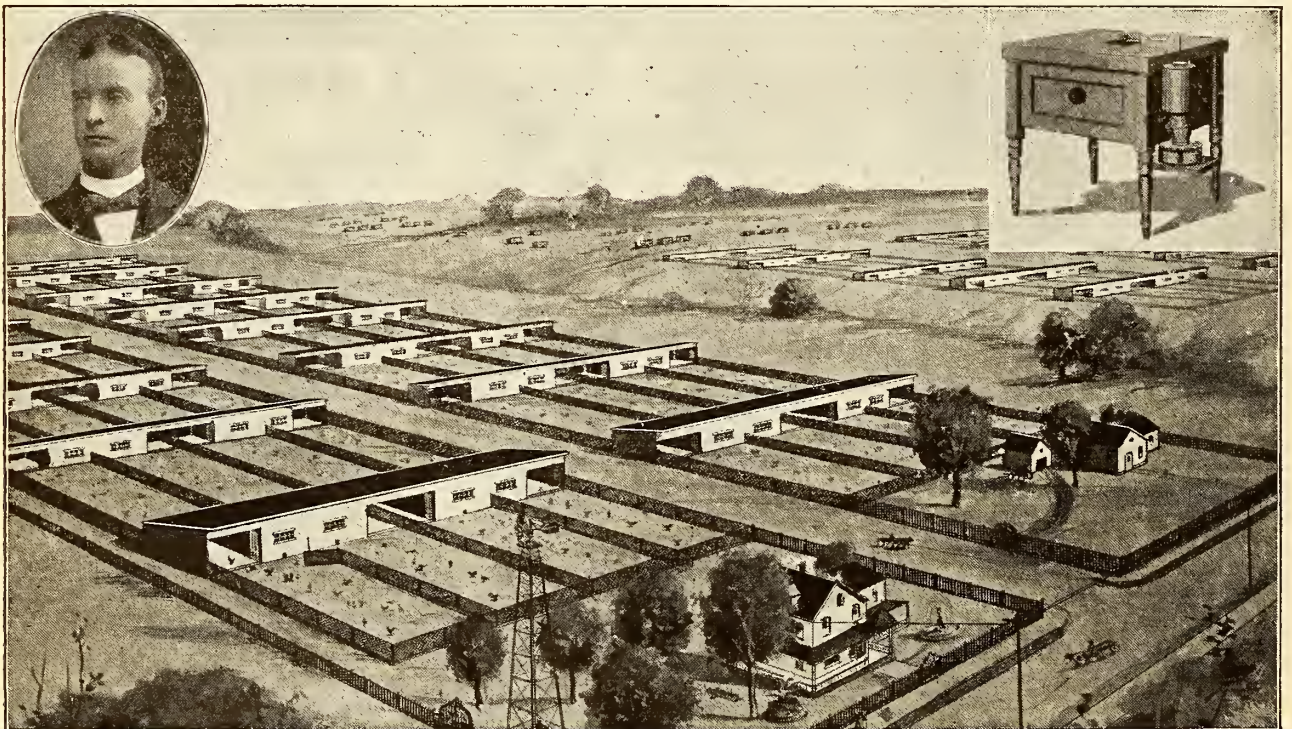

That the thermometer registers correctly must be ascertained with certainty, and, if incorrect, the error must be allowed for. We have had what is put out as a good incubator thermometer, which registered correctly for the first four months we had it, but eight months later, having been kept in the incubator meantime, it registered one and one-half degrees too high.

In starting an incubator from the cold state it is best to run it with doors and ventilators wide open for several hours, the time depending on its size, so as to expel all moisture. Then close the doors, set the ventilators according to instructions furnished by maker, place the thermometer with bulb at such a level as it would be if resting on and between two eggs lying on sides in tray. Then adjust the lamp until the thermometer registers 102 degrees, then adjust the heat regulator until the damper hangs level and just free of the flue when the thermometer registers 102.

When the thermometer has remained for one hour at 102 degrees without af-

fecting position of damper, put in the eggs, neatly placed, lying on their sides in tray, and adjust the thermometer so that the bulb rests on and between two eggs with the tube elevated at just enough angle to permit of easily reading the scale. The temperature of the bulb will fall considerably from contact with the cold eggs, but the damper may not fall, nor be any way affected. This is because the thermometer is more or less distant from the eggs, and its temperature is controlled by that of the air which encloses it, and the total volume of air in the egg chamber will be very little affected in temperature by the cold eggs, but do not make any adjustment of lamp or regulator for 24 hours, providing the thermometer never registered more than 102 degrees during that time.

The temperature at which eggs are to be maintained is usually assumed at 102½. In our practice we give 102 the first week and 103 thereafter. After 24 hours adjust the lamp and regulator so that damper hangs freely and level about ¼ inch above upper end of lamp flue. It is necessary to know that every thermostat, however sensitive and well placed it may be, has more or less of inertia, by which I mean that a definite change is necessary to the movement of the thermostat similar to the turn of the scale in weighing, and it is usually not less than one degree, often more. For the same reason, when the thermostat acts, it will move too much, causing at least one degree too much change, and unless very sensitive will not oscillate back to the temperature required. The range of regulation, too, is limited, and for the adjustment of temperature when the animal heat of the eggs begins to be manifested, the lamp flame must be lowered.

Crescent Poultry Farm, Des Moines, Iowa. The Largest and Most Complete Poultry Farm in the Country
Our New Book, "MONEY IN POULTRY," Just Out.

FRANK FOY proprietor of the **CRESCENT POULTRY FARM**, has just issued a new and valuable book called "Money in Poultry." This book contains 84 pages and probably gives more reliable information about the business based on actual experience on the farm than any other book of the kind published. It tells everything about the poultry business from start to finish; describes our 25 leading varieties of pure bred fowls, and the **Frank Foy Incubators and Brooders**. Quotes extremely low prices on fowls, eggs, incubators and brooders. Mailed for 4 cents in stamps. Address **FRANK FOY, Box B, Des Moines, Iowa**

After the first 24 hours the eggs ought to be turned, and the egg tray reversed end for end. This should afterward be done regularly every 12 hours until the close of the 18th day. If the turning be not systematically done, the hatch will be impaired, for the development of the circulation in any part of the egg will be impeded if that part does not at any time receive fully as much heat as other parts. In turning, we prefer quarter turns, marking eggs to make this certain, and assuming that the eggs be marked 1, 2, 3, 4, at the four quarters, we turn from 1 to 3, then 2, then 4, then 1 again, and so on. This seems to us the easiest way of assuring that all parts of the eggs receive maximum heat for the same length of time.

Cooling of the eggs is usually recommended, but we do not cool them specially. When turning we remove tray into a room 60 to 65 temperature and we turn the eggs in a leisurely manner by hand, also shifting the position of the eggs in the tray. This usually occupies five minutes, and after the 10th day we do not mind if the tray is out ten minutes, providing the room is not below 60 degrees. That is all the cooling our eggs receive except at testing times.

Testing is very necessary for several reasons. Probably infertile eggs may remain in tray up to the 10th day, without doing any harm, but on the 10th day, animal heat ought to be manifested on the surfaces of fertile eggs, also if infertile eggs be left in contact with fertile eggs the latter will be chilled, which will at least deter their hatching. With pure white shelled eggs, shells of ordinary thickness, first test may be on 3rd day. Indeed on the 3rd day with an egg of pure white shell the process of development may be seen better than at any time with eggs having dark shells.

With dark shelled eggs the end of the 6th day is probably as early as a good test can be made with any ordinary tester, and the first test should be made then. If the operator distrusts his opinion he need not remove unfertile eggs at this time, but on the 10th day the second test should be made and all infertile eggs and dead germs removed. At the end of the 14th day, the third test should be made. At this time if incubation has proceeded at a normal rate, fertile eggs having live germs will appear as opaque, the whole surface of the egg as viewed in one plane and any egg which fails to show opacity to this extent is either much behind time or else contains a dead embryo. After the 14th day further test is necessary for dead germs, but we test up to the 18th day for size of air cells.

This is a matter which demands considerable explanation. When an operator is using his own eggs whose characteristics he is well acquainted with, the size of the air spaces is a perfect index for deciding when and how much moisture the eggs need, if at all, but when using eggs of all kinds and sources, it is not at all a valuable index. There is a well known chart, published in many books, showing relative size and form of air cells after each of certain specified days of incubation. This chart in my opinion is only good for eggs incubated in a moisture machine and the spaces are somewhat larger than normal sizes, after some times of incubation in any machine where moisture is not to be added at any time. Most makes of moisture machines

give instructions as to how and when moisture is to be added, but I think any operator using his own eggs may learn by observation of air spaces to know exactly what is necessary as to adding of moisture during any hatch.

From the 10th to the 14th days, the animal heat of the eggs begins to be manifested and attains its maximum under normal conditions of incubation. During this time the lamp flame and regulator will need frequent adjustment. The more adjustment there is required the more certainty is there of a good hatch, if nothing untoward happens later on.

After the end of the 18th day, the incubator should not be opened for any reason. When the hatch is about to begin, the temperature of the eggs will rise, and we do not try to check this rise unless the temperature goes beyond 105 degrees, but this is egg temperature and not that of air in the egg chamber.

All incubators should have a nursery underneath egg trade, into which chicks can get as soon as possible after they are dried off. When the egg chamber receives its heat by radiation from the under surface of a hot air or hot water tank above, as it does in nearly all makes of incubators, a chick standing upright in the egg tray will have its head in a temperature of about 110 degrees, and prolonged exposure to this is harmful. In the nursery the temperature will be about 90, with no chicks in it, and about 100 when well supplied with chicks. The chicks may be left in the nursery until about half the eggs are hatched, and then removed to other suitable quarters. The chicks hatched later may, if necessary, be left in the nursery for 24 hours or more, if the egg tray be removed when the hatch is finished.

Those who have used incubators will generally have a preference for one form and make of incubator. I must confess to that failing, but at the same time I know that while there are good makes and bad makes all those makes that have been on the market for several years continuously will hatch well if intelligently operated under proper atmospheric conditions. I believe also that many makes of incubators can be so operated as to hatch all eggs that any hen could hatch, and fully as strong chicks too. Anyone who has had much experience with sitting hens will readily appreciate the advantage of incubators in place of hens. The apparent advantages from my point of view are:

1. The incubator is always ready. You do not have to wait for it to become broody, nor to waste time and eggs in finding out whether it is broody enough.
2. It never leaves the eggs, nor tramples them, nor refuses to sit where you place it, nor throws any eggs out, nor kills any chicks when they are hatched. It is absolutely proof against cannibalism. In fact, your eggs are not subject to any one of the caprices that biddy may be addicted to, and they are legion.
3. The incubator will hatch a large number of chicks, which may be brooded together in large lots, and thus the cost and trouble of rearing is lessened.
4. Incubator chicks are more tame and tractable than chicks hatched by hens, and this, with small, nervous breeds, is a valuable consideration.
5. Incubator chicks are not hatched with lice on them, and need never become

lousy while being brooded, whereas "eternal vigilance is the price of liberty" from lice in most cases where a hen hatches and broods chicks.

6. Finally, I believe that chicks may be reared more rapidly and to better development when there is no hen to interfere.

JAMES SHACKLETON.

Short Hills, N. J.

FEEDING FOR EGGS.

Ten inches of litter—clean water, slightly warm—plenty of grit—oats for breakfast scattered in litter over night—mash with a ratio of 1 to 4 at noon—grain at night—wheat and cracked corn alternately, and whole corn if weather is severe. Summary: Three days mash, three days cracked bone, green vegetables before them all the while. Keep birds free from lice.

S. E. LANE.

Supt. Emma B. Poultry Farm.
Gurnee, Ill.

CABBAGE.

At this season of the year, when the fowls are confined to their winter quarters, it is the business of the poultry raiser to supply his fowls with everything in line of rations. Much that they can get for themselves during the summer months. One of the most important items is a supply of green food and one of the best ways of furnishing this is in the cabbage. Hang a head of it up in the henhouse and you will be surprised how soon 10 or 12 fowls will finish it.

J. A. BARNUM.

Tekonsha, Mich.

James Rankin is the father of duck culture as a business, in this country, judging by the generally accepted honor paid Mr. Rankin. But strictly speaking, that credit belongs to the father of A. J. Hallock, of Long Island, who raised market ducks before Mr. Rankin began. The business is still kept up by the son.

INSTRUCTIONS TO THE BEGINNER.

**How to Get Prominently Before the
Public as a Fancier and Breeder, and
Establish a Paying Business.**

First, let me say conspicuousness of character must chime with conspicuousness of position. The topic sets forth a trinity of excellencies. A fancier, a breeder and a successful business man—a rare combination and is itself my apology for introducing the

PERSONAL EQUATION.

As the beginning of instruction I assume direct form of address at the risk of being thought impertinent. Are you sure that you can go into the "chicken business" even in a small way and maintain your self-respect? You cannot hope to succeed with a low idea of the business itself. You must consider the vocation not merely as honorable, but also as worthy, not merely as a money-maker, but as a blessing to the world as well. You have no moral right to engage in a business that does not commend itself to your moral sense. Some persons regard the poultry business as low, mean, small, unworthy of immortal farmers and caste. Social antecedency and paternal instructions have elevated many an un-

clean nose above the hen yard. Society engages to empty its ashpan on the poultry farm. If you are affected with any phase of the vanity, you have not good sense enough to "scratch with the hens" and would better betake yourself to other industry. You must, absolutely must have a taste for an interest in poultry. You may be a breeder without this, a fancier never.

Further, you need good practical sense to succeed both as a breeder and business man. Good judgment, mastery of detail, in short, every mental quality needful for success, in other business ventures, finds ample field in the poultry business. Being blest with honor in your dealings with others is not enough. You may be a technical purist and a moral liar. "Honesty is the best policy" merely as regards your own safety and may be steadily observed without enthusiasm. You need both correct moral sense and moral courage to hold you joyously to what your best judgment and finest moral sense assure you to be right in the conduct of your business. Now, assuming that you possess these necessary qualifications, my advice is:

Get ready before you begin. A high-class education may not be needful, but a good general education is manifestly important. Your very brain power may prove a menace unless you have it under control. Your economical preparation should be thorough and extensive as the demands of your business enterprise. If possible, attend some one of the schools that sustain a poultry department. If the school is out of question, spend at least a year in some first-class breeder's plant. Go there as student and helper. You may have to accept small pay or no pay, never mind, you are getting ready for ownership. Be observant, ask questions, discuss topics, gain facts and a mastery of them. Do not be content with knowing how; learn the why of every detail, mark results of every step. You need to know the laws of heredity, the influence of environment, the process of development, the efforts of opinions, the different rations and the principles that govern in the conduct of a successful plant; learn these things thoroughly. If you cannot master these knowledge quit and go to something else.

I would emphasize, also, the value of the poultry journals. Read them, digest them. Much of the very best literature of your proposed business is published in them, month succeeding month. Study also the "Standard" and other standard books on poultry culture, especially those of a philosophic nature.

HOW TO BEGIN.

You may be compelled by circumstances to begin where you are. The special conditions must be met by adaptation. If you can select your location, get right into the heart of chickendom, having regard, of course, to your breed markets and vicinities. No permanent gain can be got by violating yourself or attempting to "corrall" a virgin territory. Begin in a small way. One breed is enough for any beginner. A small amount of debt may prove a stimulus. Much depends on your disposition. As a general proposition it is best to avoid debt as your actual asset. Moreover, your investment is not worth its first cost until you enhance its value.

The selection of a breed will perhaps precipitate a conflict between the fancier

and the breeder and business man in you. The fancier must be held in check. He will pauperize himself by luxury if he gets half a chance. The breeder and business man may heartenize himself by worshiping at the shrine of utility. There are many best breeds. Doubtless there is only one best breed for you. As a fancier you have an eye for beauty, shape, color, carriage, disposition, size appeal to you. As breeder and man of affairs you are looking for profits. It should not be over-difficult to decide on some one of the general purpose breeds, as satisfying your eye for beauty and your desire for profit. First settle as to your aim in breeding, whether the general market or one or more of the special outputs be broilers. Study well the adaptation of the several breeds, then bearing in mind that you are a fancier, make your choice. I would advise you to let the markets take care of themselves for awhile and push your trade in the wide field of the general market. Bear in mind also that a breed that will not make a good profit from eggs alone is not worth while.

Having selected your breed, get the very best stock. The reason is obvious. You can get your start on the foundation of a successful breeder. The immediate cost is greater than for inferior stock, but the near future will fully compensate for the larger outlay. I would buy stock rather than eggs, because the profits are immediate, the outlay need not be much greater. You get the experienced breeders' finished product, you can see it. When you buy stock, buy on approval. If it is not as represented return it. If sacrifice it to be made getting a start let it be in quantity, but the best, the very best and *nothing* but the *best*. Do not despise the small breeder and specialist; he may not dazzle you with wide-spreading ads, but the chances are that he can do you far more good than the 30-variety man. If you can, visit the yards of those you may do business with and make your selections. Be as economical as you can.

HANDLING THE FLOCK.

Comfort and convenience are both of prime importance in your house. Your building must be proportioned to the size of your flock. Allow 5 or 6 square feet of floor space per fowl. The nearer your house approaches the square, the cheaper

R. H. SHUMWAY, Rockford, Ills.

it may be. Make it warm, well ventilated and arranged for convenience in keeping it clean. I have never formed a general plan that wholly commends itself. Your own practical sense must be relied on to adopt any formal plan. Again I urge economy, your house need not be pretentious, it must be comfortable, both winter and summer, and it *must be kept clean*.

Among the flock study to be quiet and mind your own business. These birds are the open leaves of the book you are learning to read and understand. Tame them, make friends of them, know them one by one.

Feed is of prime importance. Do not lose your fowls; feed them. This is both science and art. Science for knowing the demands of your fowls, art in the application. You can fatten a fowl in ten days. It would seem unwise to feed fattening food during the whole year. You must feed for eggs, development and energy. Get a chemical analysis of the egg and various foods and study them with care. Lean meat, bone, wheat, oats and like grains are thus learned to be most valuable, but you must study the relative value of foods and feed with an eye both to the demands of your flock and cost. This will keep you figuring for a day or two and incidentally, occasionally always. Assure yourself that all that the advertised necessities are not necessary. Hang onto that pocketbook. A sufficiency of wholesome food, having regard to variety—meat, grains and vegetables are all you need. You must also supply teeth in the shape of sharp gravel, broken crockery or commercial grit, and you must provide exercise. Make your fowls work. Begin the fight on vermin at the very beginning and *don't* let up.

¶ In mating, I believe in small flocks, you can work with greater assurance of results. I have not very much confidence in the doctrine of opposites and have no confidence in the man who lays down a general rule for all varieties. I know of no department of the poultry business where experience and judgment count for so much and need be more fully relied upon.

You must familiarize yourself with the laws of heredity. Study the effect of sun and shade and age upon color, and experiment. Care must be taken to avoid mating for fancy points alone. A good all over bird will give better results than one especially strong in one or two points and otherwise weak. Mate none but healthy stock, vigorous, profitable and as near alike—shape, size and color—as you have. Breed in line but not too close. The closer you inbreed the more attention must you give to vitality in parent stock. Remember, your flock is to be practical. Do not use a bird that you cannot sell. Sell only what you cannot use. Make up your pen of the choicest of the flock.

PUSHING TO THE FRONT.

¶ This is the business end. Some persons cannot do business even if it stands about them waiting to be done. If you are of this number get some one to act on your behalf. Master the detail of your business, so that you are familiar with it at every point. "A penny saved is a penny earned." Avoid waste. Scraps of food saved may be the nucleus of dollars in the profit accounts. This habit of economy will soon tell on your business affairs and help to assure permanency. Tidiness is another delightful attribute that will aid materially in getting prominently before the public. Those

things may not affect the public a thousand miles away, but your public is the immediate neighborhood and transients. Get your neighbors to talking favorably; they will soon spread your fame.

Advertise your business. Advertise liberally, but not wastefully. Advertise the year around. Select a paper that has an actual circulation of a large extent. Do not be caught too often by glaring promises and special rates. Good advertising space is worth great money. Change your ad frequently, make it attractive and unquestionably truthful. You can well afford to take lessons in ad writing. Attend the poultry show, exhibit your stock. Mix with the fraternity. Keep your eyes and ears open and go home with an added education.

I believe in the private score card. It aids the beginner in judging his stock, it affords you a chance to discuss points with one who has some knowledge, and after all that has been said "it does tell mightily with the buying public." As for the culls and market birds, you must study the markets. I have found it more advantageous to sell 3 or 4 lb. chicks in July than to hold them for larger weights and almost invariably smaller prices.

I have said nothing about incubators, brooders, heating apparatus, patent nests, etc. I have assumed that you are a beginner and comparatively poor. You would better succeed first with the good old way and make haste slowly. When you get on your feet you may buy an incubator, but I would advise you to wait until you can attend to it—devote your whole time to your poultry affairs. All such things can be added at such times as your growing business demands.

Now I venture to assert that a beginner of such moral fibre and intellectual capacity as indicated and observing the course marked and by these rough lines of thinking, cannot fail to "get prominently before the public as a fancier and breeder and build up a paying business."

I have studiously avoided rehearsing a great many pertinent suggestions, because such preparation as I have advised should provide for such omissions. A noble manhood with good furnishing is the best foundation for success. It is the man who succeeds. You will meet with many a discouragement. These should only fire your ambition. Carefully weigh yourself, count the cost, make ample preparation at the beginning, concentrate your abilities with enthusiasm upon your ambition. Economize both in expenditure and methods. Be wise in economy. Do not be a niggard—push. Push, PUSH, PUSH. Be patient, prompt, honorable, courteous in your dealings and you will win.

Anita, Ia.

J. F. DAVIS.

R. H. Rolson, Urbana, Ohio, the Buff Plymouth Rock specialist, is offering some choice cockerels for sale at very reasonable prices. Write him for prices and particulars.

Under our illustration in the December issue of first prize Houdan hen at St. Louis, we gave the credit to C. J. Sadler, Old Orchard, Mo. This should have been credited to E. F. McAvoy, Schenectady, N. Y.

J. W. Andrews, of Dover, N. J., whose ad appears in the Classified Ad columns sent a June hatched R. C. Buff Orpington pullet to St. Louis and won third in a class of six. One of her sisters won second at the Herald Square. He expects to capture the blue at Madison Square.

Klein & Anderson, Macon, Ill., breeders of several varieties of fowls, ducks and geese, have a change of ad this month. Write them for prices and particulars and mention AMERICAN POULTRY JOURNAL.

J. H. Doane, Gouverneur, N. Y., the Black Minorca specialist, in sending in copy for change of his ad, writes: "Have a grand lot of birds to fill matings with and hope to get out many more next season than in past seasons. Have about forty cockerels, and several of them strictly good show birds. Also about 100 females to sell, and some fine ones." Write him for prices and mention AMERICAN POULTRY JOURNAL.

Dr. W. G. Baker, proprietor of the White Lily Poultry Yards, writes that he won three prizes at Hamilton, Ohio, on his White Wyandottes. Look up his ad elsewhere in this issue and write him for prices and particulars.

MILLS' "NEW HEN" INCUBATOR \$5.50

Here is the Incubator everybody wants. It is the most wonderful setting hen on earth; always ready to hatch your eggs, and will do it every time if they are fertile. It is built of good material throughout, double walls, self regulating and handsomely finished; nothing to get out of order; will last for years and must not be compared with anything on the market.

It is a perfect batcher of 55 egg capacity—just the thing for private families where from a few dozen to several hundred chicks are to be hatched during the season; so simple anyone can operate it and after you try one you will have no other, and your neighbors will want them.

This "New Hen" is the result of our experience in raising poultry on our large poultry farm and we guarantee every machine to give satisfaction, and in order to place one in every town in the United States at once we make the price \$5.50, and can ship machine at once on receipt of order.

Our new Catalogue of Thoroughbred Poultry, Poultry Supplies and Incubators will be mailed free to all who apply for it.

F. B. MILLS, Box 514, Rosehill, New York.

Judge S. T. Lea says that "Alice White" is the most beautiful and nearer perfection than any bird he ever handled in 20 years judging poultry.

The Gaines' White Ply. Rocks

BRED TO WIN—AND DO IT

We offer a prize of \$50 in gold for best pair, (cockerel and pullet) Free circular which explains, on request. The Gaines White Rocks won at Charleston, S. C., Nov. 21 to 26, 1904. Pullets, 1st, score 97 1/4; 2d, 95 1/2; 3d, 95 1/4; tie 4th, 94 3/4; also 3d pen. Male birds all in bad feather. Eggs for hatching but no stock for sale till fall.

E. H. GAINES, Prop., GAINES' POULTRY YARDS, GAFFNEY, S. C.

OAK BLUFF

Light Brahmas & Partridge Wyandottes

I have about 250 choice cockerels and pullets, five cocks and about twenty hens for sale, and can furnish you choice exhibition stock in both varieties or fit you out with excellent breeders. **MY LIGHT BRAHMAS** won at World's Fair, St. Louis, 1st, 3d cocks, 4th cockerel, 5th, 6th, 7th pullets. At the great Chicago show they won 1st, 3d cocks; 1st, 2d, 3d, 4th cockerels; 1st, 3d, 5th hens; 1st, 2d, 3d, 4th, 5th pullets; 1st pen and grand special silver cup. Their clean cut markings and fine shape made them favorites in both shows. **MY PARTRIDGE WYANDOTTES** won at the great Chicago show in the hottest of competition, 1st, 2d cocks; 1st, 3d, 5th cockerels; 2d pullet, 5th hen, 2d pen, grand special silver cup. They are elegant in both shape and color. Send for my catalogue and write me your wants.

OAK BLUFF,

DR. N. E. MIGHELL,

Marshalltown, Iowa.

THE RESULTS

OF USING cheap and inferior poultry supplies, foods and grain rations have proven that such investments are the worst that can be made. The practical poultryman and farmer of today demand articles that have value and that will bring the most profitable results. ¶ We are the largest poultry supply dealers in the world. Our large Illustrated Catalogue describes hundreds of useful appliances for the farm and poultry yard. To those who inquire for this book we will give absolutely free, a true-to-life picture in three colors of Edward B. Jr., the famous WHITE PLYMOUTH

ROCK COCK, bred by U. R. Fishel, and sold for \$500.00. Our catalogue contains valuable information on the question of feeding and rearing poultry; also describes our complete line of INCUBATORS and BROODERS. Our machines have never been defeated in any contest. The principles that we employ in building our incubators and brooders have been tested for the last fifteen years and have proven successful. They are sold on a POSITIVE CASH GUARANTEE—Money Refunded If Not Satisfactory. We handle only standard and guaranteed goods. Bone Mills, Clover and Root Cutters, Feed Cookers, Brooder House Heaters, Spray Pumps, Farm Carts, Shipping and Exhibition Coops, "International Pheno-Chloro," "International Louse Powder," "International Louse Paint," "International Roup Cure," "International Cholera Cure," and other Standard Stock and Poultry Remedies.

JEWEL CHICK FEED

Is a GUARANTEED FEED, and will raise more chicks to maturity than any similar preparation in the world. We guarantee to refund money in every case where this feed fails to give satisfaction. ¶ Those interested in poultry should send for our catalogue at once and learn the particulars concerning our FREE OFFER of Valuable Books that we will give each inquirer.

A NEW POULTRY BOOK.

Especially Written and Designed for the Beginners—Mr. Clarence Ward is the Author—Sent on Approval.

Last month we gave a hasty review of a new poultry book, entitled "Successful Poultry Culture for Pleasure and Profit," by Clarence Ward, proprietor of the Congress Park Poultry Yards, of Congress Park, Ill. We have since then given this book a more careful perusal and find it to be one of the best books for the beginner in poultry culture that has come to this office for some time. It is verily a gold mine of valuable information on this subject and we believe it will prove to be a gold mine to anyone following its instruction, as it is both practical, up-to-date and scientific.

The book treats at length on the great profits in poultry culture, citing many cases where splendid incomes have been made from this fascinating business. It is a well established fact that there is big money in poultry culture. There are thousands of men and women who are earning princely incomes from it, while there are many more thousands who are making a snug little income every year conducting it as a side issue. To make from \$100 to \$1,000 clear profit every year, just in the spare moments, is no small matter with most people. And yet there are thousands who are doing this very thing raising poultry, and this same thing can easily be accomplished by anybody who will conduct it in an intelligent manner. It is just for this latter class that Mr. Ward has designed his book and by following its simple instructions success will be sure and the profits large.

SENT ON APPROVAL.

Mr. Ward wants every beginner to read his book, and is willing to send it free on ten days' approval to every man, woman or boy interested who will take the trouble to write to him for it. In order to assist our readers to get this book on approval we print the following coupon, and advise our novice friends to fill it out, cut off, and send it today: Congress Park Poultry Yards, Clarence Ward, Prop., Congress Park, Ill.

Enclosed find 4c in stamps for which please send me on approval, your new book, "Successful Poultry Culture for Pleasure and Profit." If I want the book I agree to send you 50c for it. If I don't want it, I agree to return it to you within 10 days.

Lanier's Barred Rocks are better than ever (Harry M. Lamon and E. B. Thompson strain direct). Will have the grandest matings for the egg trade this season I ever owned. Each yard headed by a fine exhibition specimen fit to show at Chicago or New York. Orders booked now. Free circulars containing real photographs of my birds. Eggs, \$3 per 13. Satisfaction guaranteed. Write me.—DEWITT LANIER, Cardwell, Mo.

Wilber Bros., Petros, Tenn., won a big victory in a very strong class of S. C. W. Leghorns with only one pen entered at the big Chattanooga, Tenn., show just closed. They made a clean sweep on firsts and seconds and their winners were as follows: 2nd cockerel, 1st and 2nd pullet, 1st and 2nd hen, 1st pen and a long list of valuable specials.

The first requisite for success in market poultry is the judicious selection of a variety for the purpose intended, says the same authority. For the purpose under consideration pure-bred fowls are so superior to mongrel stock, that no one who desires to make the best of it should for a moment entertain the idea of using mongrel or mixed varieties.

The editor of *Rural New Yorker* says: "I heard a good deal of talk about 'fresh' eggs. What does 'fresh' mean? Lots of farmers take their eggs to market 'once in ten days or two weeks,' and feel quite hurt if the buyer calls them stale." An egg is not, strictly speaking, fresh after it is three days old.

Authorities claim that it is a mistake to believe that geese or their droppings will kill grass or destroy a pasture. If you have a large flock of geese and a small pasture, they will clean it up. That is, they will eat the grass as fast as it sprouts, and give it no chance to grow, just as a cow on a city lot will soon have only bare ground, and you have to tie her out in the road. If you could do the same with geese, you would find the grass coming up again and growing as before.

It will sometimes happen that you will hatch and raise a gosling with a broken wing. It is no serious fault at all, only a misformation in the egg. If it is a nice, large, promising bird, it is advisable not to kill it. There is no danger that it will breed broken wings. Should the defect be an eye-sore, Newman advises a little surgery. Take a sharp knife and sever the crooked part at the joint. Bandage it and it will soon heal, and you will never notice it afterwards.

GREIDER'S FINE CATALOGUE
of Standard bred poultry for 1905, printed in colors, fine chromo, suitable for framing, illustrates and describes 60 varieties. Gives reasonable prices for stock and eggs, tells all about poultry, their diseases, lice, etc. This book only 10 cents.

B. H. GREIDER, RHEIMS, PA.

Reliable Exhibition Coops

Solid, rigid, put together with screws, these coops are just right for the display and protection of valuable birds. The woodwork is painted a dainty blue tint which in contrast with white muslin gives your birds ideal surroundings. Coops can be cleaned even if piled on each other. Six sizes—single and double. Send 10 cents for postage and get a book worth dollars to any poultryman.

Reliable Incubator and Brooder Co.
Box A-1 Quiney, Ill.

Wyckoff's S. C. White Leghorns

Acknowledged everywhere the world's greatest laying strain. None better in standard qualities. By our 30 years of continuous breeding and selection we have placed them unquestionably in the lead as the most profitable strain in America. You assure your success by using them as your foundation stock. Choice stock for sale in any quantity. Yearling hens and early hatched cockerels and pullets, all free range raised and perfectly developed birds that cannot fail to please. Send for catalogue and let us know your wants. Address

WYCKOFF'S FARM, Aurora, Cayuga Co., N. Y.

SAVE MONEY

...ON YOUR SUBSCRIPTIONS...

Instead of paying full price, take up one of our offers. You can take more papers in this way. All papers are for a year. Send at once.

Papers can be sent to different Addresses if desired.

Every fancier needs more than one poultry paper in the successful conduct of his business, thereby securing the wide range of valuable information on all phases of successful poultry raising. There are over 70 poultry papers in the United States. AMERICAN POULTRY JOURNAL, which enjoys the prominence of being the pioneer paper of not only the United States, but the world, has been enabled to make special clubbing prices with some of these journals and we give our subscribers the benefit of same.

We have also made a careful selection of all the best poultry books published. In the list below we have combined AMERICAN POULTRY JOURNAL with only one of these publications or books with special price for same. Should any one desire to take more than one poultry paper or book in connection with AMERICAN POULTRY JOURNAL, they can find out the clubbing price by adding the regular price of all the books and journals they wish to take together and deducting 25 per cent. For instance, should you wish AMERICAN POULTRY JOURNAL at 50 cents, one other journal at 50 cents and one book at 50 cents, the clubbing price would be \$1.12. These clubbing offers are for old subscribers as well as new.

All orders received at this office will have prompt attention and we in turn will send the orders to different papers, thus saving you the annoyance of writing a number of letters and also saving you money through the reduced rate we can make you by sending in your order for all the poultry papers or books you wish to us.

Orders will be taken for the new Standard of Perfection, published by the American Poultry Association, and which will be ready for delivery March, 1905. This is a book of nearly 300 pages and will contain over eighty black and white illustrations of ideal specimens of male and female of every Standard variety.

A Visit to The Plant of J. C. Fishel & Son, Hope, Ind.

Owners of the Beautiful Pair of White Wyandottes Shown in the Colored Frontispiece of this Issue of American Poultry Journal.

A Description of White Wyandottes, the Variety Exclusively bred and Raised by Them.

Hope, Indiana, has become a great poultry center. Hope is a small town and the center of a wonderfully rich farming community near Indianapolis, but there was nothing to single it out and

benefit of this experience is coupled with the best stock to select from.

The foundation of this great flock of "World's Best" White Wyandottes was accumulated from different sources each of great value and includes the stock of the late Dr. D. C. Harrold of Elwood, Ind., and the Gardner and Duining stock which produced so many eastern prize winners and 150 of W. C. Pierce's best stock. Intelligent matings and close attention to the science of breeding for best results in both size and egg laying qualities as well as show points have made the Fishel Wyandottes, as their trade mark so cleverly put it, "The World's Best."

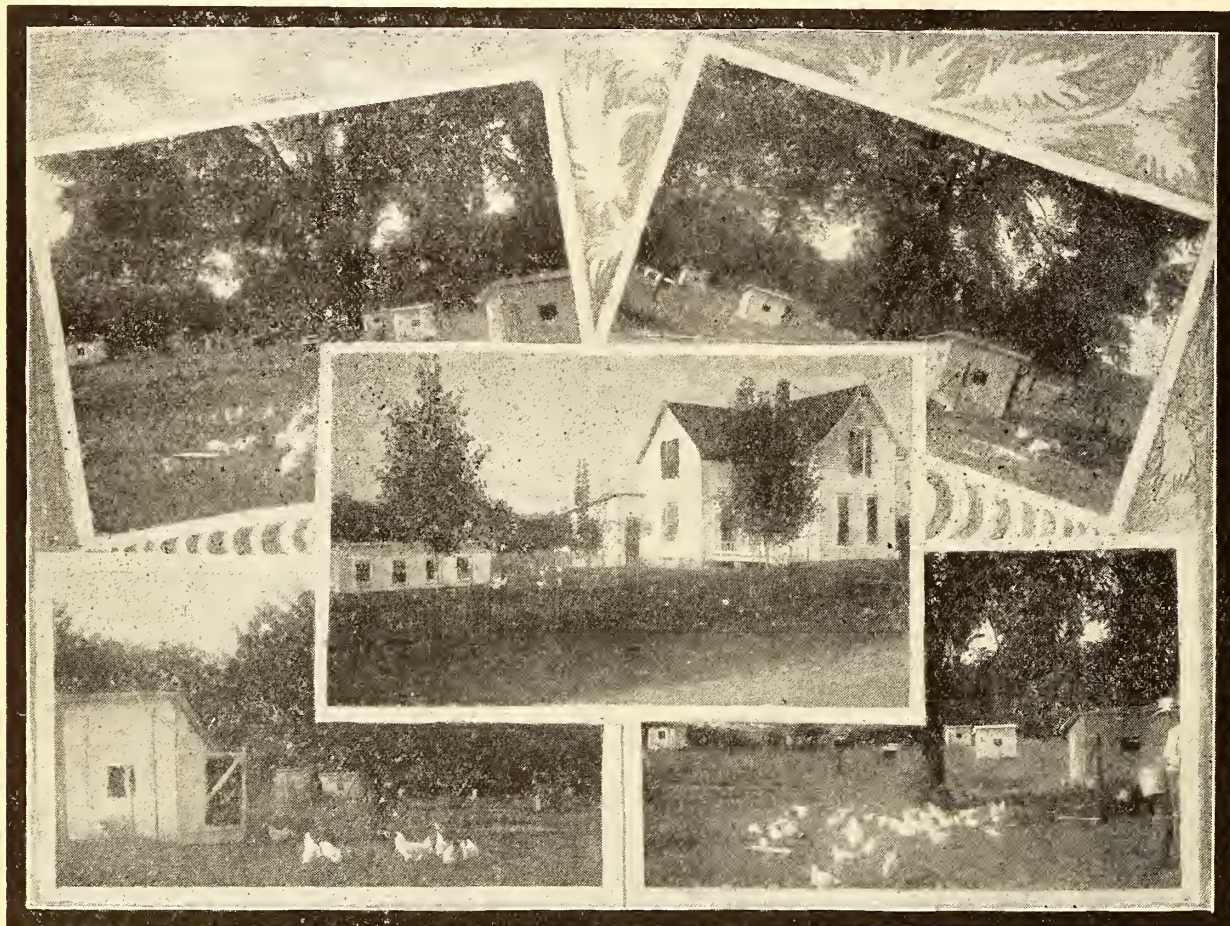

We found these gentlemen very pleasantly located in a large, comfortable house on one of the most beautiful streets of

J. C. Fishel & Son either as egg producers or birds for market purposes. Their compact, well rounded, broad, deep body and breast, beautiful golden and yellow legs and skin and their crowning point, the beautiful white plumage, which they are constantly bringing toward a condition of absolutely white, stay white, quality, places them in a class by themselves.

These gentlemen pay special attention to mating for great egg results as they have demonstrated by individual records of their birds placing them in the front rank of great egg producers.

J. C. FISHEL & SON'S POULTRY YARDS.

The photographic views of the White Wyandotte Poultry Farm of J. C. Fishel & Son as shown in the accompanying illustration gives but a faint idea of it. One of the splendid features of this plant

Photographic views of the White Wyandotte Poultry Farm of J. C. Fishel & Son, Hope, Indiana.

cause the name to be printed in capital letters on a railway map until its poultry fanciers began to make it famous. One of the concerns that has contributed largely to this fame is J. C. Fishel & Son. This firm consists of Mr. J. C. Fishel, who has for years been a breeder of good poultry and his son, Charles Fishel, who takes an active interest in this large and constantly increasing business.

The White Wyandotte poultry farm of J. C. Fishel is one of the big things in the poultry business and here can be found some of the best birds of this variety in the country. They are specialty breeders of White Wyandottes and their plant is equipped with the best of buildings with ample range and everything necessary to mature the stock in the best possible manner. Mr. J. C. Fishel has bred poultry for over twenty-five years and the

village of Hope, Ind. An inspection of the plant was a surprise and delight. There were well built buildings in which cleanliness and hygienic conditions were apparent, a splendid system of colony houses and ample room for all the range necessary to develop the hundreds of birds that are necessary to fill the orders that accumulate from all over the country.

The secret of the success of these gentlemen is very apparent to any one who would visit the plant. The painstaking care that is apparent with everything connected with this business enters into all its details from the care of the little chick to its development into a prize winner and the filling of orders that go to all parts of the world.

No strain of White Wyandottes can claim a stronger following than that of

are the magnificent trees that provide ample shade for the growing stock. The colony and brooder houses are scattered through this splendid grove and the space is divided up into yards and runs. There is no crowding and ample room is given each colony. The careful and methodical system of feeding is looked after every day with a view of developing the best egg laying qualities that can be produced under these most favorable conditions.

INDIVIDUAL SPECIMENS AND SHOW RECORDS.

The illustration of the White Wyandotte hen shown here of Snow Flake, a 96¼ point bird, is a specimen of their production. The colored frontispiece in this issue is a painting from life of a pair of birds from their yards and pictures the highest development of this well known and popular variety. These birds

were bred and raised and can be seen in their yards.

The birds in the colored picture are Edith E. and White Wonder, both winners of the most coveted prizes at the largest shows and are unquestionably without a peer. Both are absolutely white, stay white, which makes the original "World's

ments of the modern poultryman.

These people have special facilities for selling eggs for hatching. Urgent demands have been made upon them for eggs and they are compelled to furnish them. They ship from the same yards that they breed from themselves and the purchaser can rest assured that they get

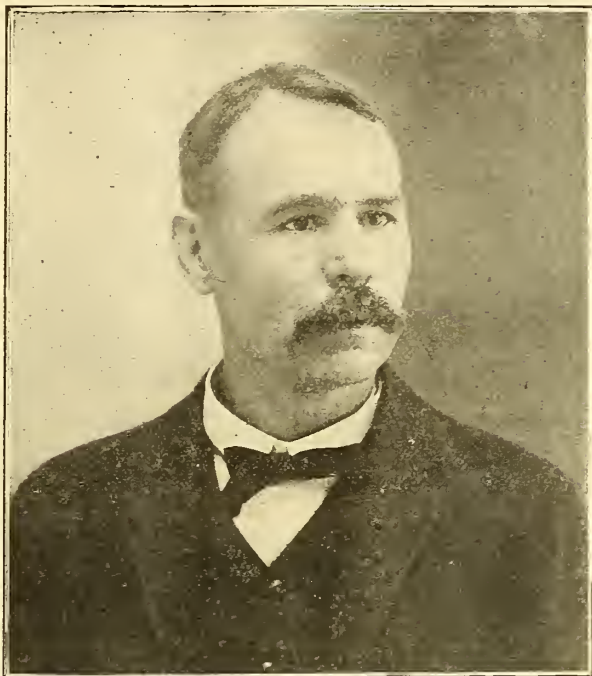

tain a better express rate. Great care is given in the shipping room to see that they are well fed and watered before starting on their journey and if it is a long journey feed is placed in the coops. Personal attention, which is one of the strong features of their business, is given to all shipments.

ORIGIN OF THE WHITE WYANDOTTE.

The origin of our Wyandottes is shrouded in mystery, says a writer in *Poultry Keeper*. Many claims have been made as to how and when the breed originated, but so far all claims have been proved groundless when the searchlight of investigation was turned on them. The best, in fact, the only reliable authority that I can obtain, gives New York state as their home when as far back as thirty years ago the Silver Wyandottes, or at least the breed from which our beautiful Silvers of today were bred were found among the farmers. No one seems to know just what crosses were used to produce them, but their general make-up at that time showed clearly that at least two of our oldest varieties, the Dark Brahmas and Silver Spangled Hamburgs entered largely in the combination.

That some other variety was used, was proved when the first two named varieties were bred together in an effort to secure new blood. The progeny of this Dark Brahma and Hamburg cross, while showing some of the Wyandotte characteristics, did not equal them in either shape or color. In fact, they were so inferior, that it was never considered wise to use them, and the Silvers as found then were bred in line with the best that could be obtained. And to this, perhaps, as much as anything else, we can give credit for the remarkably fine shape of this breed.

The line breeding that was practiced year after year fixed a type that for shape has no superior in our American fowls. This shape referred to was before all sorts of crosses were resorted

MR. J. C. FISHEL.

Best" so popular. They can offer the greatest continuous show record of any breeder of this variety in America. At the great Indianapolis Fanciers' show, they have won the leading prizes every year since 1898 and more prizes than all other breeders combined. This has always been conceded as one of the hottest Wyandotte shows in America. Not only at Indianapolis have they won honors, but at Chicago, Cleveland, St. Louis and most every show of note in the United States.

E. S. Comings, the great poultry authority, writing in *Poultry Tribune*, said: "In all varieties of fancy poultry, shape, that stamps an individuality as a breed, is a matter that should be carefully considered. Every breed has its form and that form should be studied by every progressive breeder. In no case is this more noticeable than in the Wyandotte and especially in the White Wyandotte family.

"At the Indiana State Fair, a gentleman while placing a White Wyandotte hen in its coop made this remark to the fanciers who crowded around him that 'there was the first prize hen, she would win out on her shape.' He was right, for when the ribbons were up this was where the blue was found and this exhibitor could justly be proud of this distinction, as it is not often that such a female is exhibited."

This bird was from the yards of the J. C. Fishel & Son and it was pretty near the ideal shape of a White Wyandotte hen with a close knit form, the head peculiarly Wyandotte, a short back and blocky shape so much desired.

Particular attention is given by these people to breeding for the short back and is regarded as one of the grandest achiev-

the best.

Great attention is given in the shipping room to the shipping of fowls. They use a light, strong crate, quite tight and made of light wood and in this way ob-

White Wyandotte hen. Snow Flake, 96¾ points. Bred and owned by J. C. Fishel & Son, Hope, Indiana.

to in order to get the big open centers in the Silver females. And fortunately the White sports, from which the most popular of all the Wyandotte family come, sported at a time when the Silvers were bred in their purity, and when their shape far excelled the winners of this variety at the present time.

While the origin of the Silvers will always remain in doubt, there is no guessing about the origin of the White variety. They were pure albinos, or white sports from the silvers, and came without resorting to any of the outside crosses, which were necessary to produce the other sub-varieties of this most popular of all American breeds. Strange as it may seem, the darkest strains of silver were the ones that sported the whitest chicks, and enough of them were found in different parts of the country to allow the breeders to secure all the new blood required to keep the size, vigor and correct shape from the start.

It is a fact that the White Wyandottes of today lead all varieties of this popular breed in snape, and in the majority of cases surpass them as layers and in quick growth. Their value as a market fowl surpasses that of any variety, and such careful attention has been given them by the big market breeders that they command the highest prices in the poultry market of the world. As layers of large, well-shaped, handsomely colored eggs, they have no superior, even among the non-sitters. As for broilers, they will finish to two pounds with as little feed and less care than any breed or variety.

As a fancy fowl they command as high prices as were ever paid for any breed, \$100 being no uncommon price for a single specimen, and more than twice this amount for some of the choicest exhibition specimens has been paid. One dollar each for eggs has been asked and received, and I can truthfully say that the cheapest birds I ever bought came from one dollar eggs. If you want the best you must pay for it. This rule holds good in every business and fancy poultry is no exception. You will find it is cheaper in the end to start right.

THE INCUBATOR MAN.

This heading will at once call to the minds of our readers M. M. Johnson and his Old Trusty Incubator. It is a great record that Johnson has made. No wonder he has become known as "the Incubator Man." He has done, perhaps, more for the poultry industry than any other one man. His great energy is shown in the fact that in five years, as manufacturer, he built an incubator business up from a few machines to a 20,000 annual output. Then, with his experience and his practical ideas and his thorough interest in poultry raising to back him, he severed his connection with the old concern and started a business all his own. He built a new factory, and

within twelve months he had sold 13,000 incubators and brooders. That is the Old Trusty, the only machine he has anything to do with now. Johnson has a common sense way of doing things that makes people like to trade with him. He handles poultry matters as though he loves and understands the business. There is no doubt that he does love and understand the business. This is made plain to anyone who reads his catalog. All poultry lovers find a kindred spirit in Johnson. Our readers will be the better for it if they will write to the man and get personally acquainted.

WILKESBARRE, PA.

The Poultry and Pet Stock Association of Wilkes-Barre, Pa., held a very successful show, Nov. 28 to Dec. 3. There was a splendid lot of birds on exhibition, and the success of this show was very gratifying to the management. Frank Johnson was President and John S. Ely, Secretary.

A VERY HAPPY FAMILY.

We present below a very happy family group—two little folks, a lot of chicks, a Gem Incubator, and Mr. and Mrs. Sweich of Cannon Falls, Minn.

Mrs. Sweich didn't believe in incubators. She preferred the motherly hen—when she was motherly, but that is sometimes uncertain? But Mr. Sweich believed in incubators for he had seen his neighbor's Gem Incubator steadily turn out strong, healthy chicks in large numbers, free from lice, and with so little trouble to the operator. The removable chick tray, the quick-acting regulator, and the ease with which the temperature and ventilation could be controlled satisfied him that he could do as well as his neighbor. He did. Here's his experience in his own words: "When

On page 833 of the December issue we, through error, stated that Wibur Bros., Petros, Tenn., won 7th cockerel and 6th pullet on S. C. White Leghorns at the St. Louis show. This should have been credited to E. E. Vanatta, Vandalia, Mo.

Owing to bad health N. L. Hutchinson will be unable to judge the Mississippi Poultry & Pet Stock show at Aberdeen, January 9-13, and the services of Judge Loring Brown of Smyrna, Georgia, have been secured. Premiums are open to the competition of the world, and the show will be conducted without fear or favor. Catalogue sent on request. Addison Brannin, Secy.

Indian games are especially noted as having an abundance of breast meat. But for some reason or other the bottom has been knocked out of the Indian Game boom.

Oatmeal is said to contain more nutriment than wheat or barley.

I first got my incubator my wife said, "No incubator for me." When I filled the incubator with 240 eggs she set three clucks. The incubator hatched 76 percent of the eggs, while her clucks hatched one chick apiece. Then she said: "No more clucks for me." From the second hatch with the incubator I got 94 percent, and the chicks are strong and healthy. I think the Gem is the best, for I know it hatches all right. I will send you a photograph of the incubator showing chicks and my family."

If you have not received a copy of their large, profusely illustrated catalogue for 1905, send at once to the Gem Incubator Co., Box B, Dayton, Ohio, mentioning the AMERICAN POULTRY JOURNAL and you will receive one by return mail. It's FREE. Write a postal today.

BLANCHARD'S WHITE LEGHORNS

are no experiment, having been carefully selected and bred for over twenty years. No labor or expense has been spared in building up and perfecting this strain, and while the production of large, pure white, fancy market eggs has been the main object, standard qualities have not been neglected. They are large, vigorous, active and handsome. Good winter layers and keep at it all summer. Unexcelled for introducing new blood or as foundation stock. Exhibition and breeding stock for sale. Illustrated circular free.

No Better Anywhere
At Any Price.

A VISIT TO THE MAY R. POULTRY PLANT, CONNERSVILLE, IND.

The stock raised on May R. Poultry plant and the proprietor, Mr. D. T. Roots, are so well known to the readers of AMERICAN POULTRY JOURNAL that it seems hardly necessary to more than mention them here, but a general description of the plant will probably be of interest to our readers.

When we were instructed by the editor of AMERICAN POULTRY JOURNAL to visit this farm for the purpose of telling the many thousands of readers of the JOURNAL what kind of establishment it was, we expected to have the pleasure of seeing a really fine poultry plant as it is so well and favorably known throughout the country. But to say that we were surprised at its great size and also the modern and scientific methods used in raising fancy poultry would be putting it mildly.

Mr. Roots, the proprietor, conducted us over the plant, which took the greater part of an afternoon, and a better, more modern and thoroughly equipped poultry plant, with a finer stock of birds, it has not been our pleasure to see for some time. The plant proper covers about 25 acres and is situated on a farm of 300 acres, where all the grain and food for the fowls is raised. The plant consists of one building, 20 feet wide and 300 feet long, with sides and ends made of cement blocks. Also three frame buildings, two of them being 20 feet wide by 160 feet long and the other one 20 feet wide by 150 feet long. Also one brick building 30 feet wide by 150 feet long and a number of breeding buildings, colony houses, feed houses, etc. The size will be better understood when we say that there are over 18,000 square feet under roof.

No one can have an idea of the amount of work required to conduct a plant of this size unless they have had the experience. The care of thousands of fowls the answering of letters, which often number 150 in a day, the selecting of birds for breeding and shipping, the mating of the yards, the incubating and raising of the chicks, etc.

The brick house mentioned above is generally used as a conditioning house. This will give our readers some idea of the magnitude of this plant and the extent of the business done by Mr. Roots, when he uses a house of this size in which to prepare birds for the show room and for shipment to customers.

The May R. Poultry Plant is conducted by a gentleman who is not afraid of work, and with his overalls on may be seen working among the fowls day after day, and the results of his labor is seen at a glance when you visit the plant. Everything is neat and clean for Mr. Roots goes on the theory that you cannot be successful in the poultry business unless you attend to the details, and "have a place for everything and everything in its place."

The Roots' famous strain of White Plymouth Rocks, which has created such a sensation in the poultry world, is the result of many years of scientific mating by Mr. Roots, and is not the offspring of any one particular strain, but a combination of all the good qualities of other strains. Mr. Roots has, by this method, produced a strain that stands out like a bright morning star, capturing prizes and winning laurels in the show room that has surprised and saddened many of the old time breeders. One thing we noticed in particular was the uniformity in all his stock, which proves that the strain breeds true. In looking over the 2,500 birds on the plant we failed to see an

off colored one among the whole lot; even the old birds were as white as the new driven snow. The color question with Mr. Roots is decidedly a white one. Nothing else goes at the May R. Poultry Plant. In fact the Roots' strain is famous for its beautiful snow white color and it deserves to be. Mr. Roots has devoted a great deal of attention to this very important point, and judging from appearance, has been very successful with it.

Mr. Roots has a record in the show room that he claims is not equaled by any other breeder of White Plymouth Rocks, winning during the last few years at Cincinnati, Pan-American, Cleveland, Chicago 1903, Indianapolis, Hagerstown, World's Fair St. Louis and Chicago Show Dec. 1904. At this show he won over half the prizes offered in the White Rock Class and every special, including the \$100 and \$25 cups.

He is now engaged in mating up his breeding yards. He will have 20 yards each headed by one of his prize winning males, and in addition will mate up 80 yards to supply his trade for incubator eggs. He has just issued his regular catalogue for this year. It is full of information that will be of value to every breeder, it tells how to score white rocks (written by Theo. Hewes). It gives symptoms, cause and cure for the most common diseases of poultry, and tells how to mate and care for them. It has a number of cuts of his prize winners, and in short it is just full of good things.

Mr. Roots will be pleased to send it to anyone on receipt of stamp. His egg catalogue will be out by January 1st, and it describes his mating, and gives cuts of the male birds at the head of each yard. He will be very glad to send it to any one who will write their address on a postcard.

and What It Will Do

OFFER NO. 1

American Poultry Journal, one year, 48 to 120 pages. During the year several full page colored pictures of fowls will be published.

Why Poultry Pays and How to Make it Pay. Revised and enlarged, size 9x12, 60 pages, illustrated. Important to beginners.

A. P. J. Hand Book of Useful Poultry Information.

This is a new book we have just published, 32 pages, 4x8 inches in size; has 4 blank pages for memorandums. It contains in a brief form most everything a poultryman wants to know.

"Yard of Chicks."

P. Harold Hayes, Buffalo, N. Y.

THE BIG POULTRY SHOW.

The history of the world is, that the tide of emigration and the centers of active business industry are continually moving, usually Westward. As fast as one locality becomes thoroughly populated and its natural resources developed, the tide sets toward another less developed locality. This is also wonderfully true of our own industry. The poultry industry is no longer an eastern monopoly. The great and glorious "Other Sections" of this, the grandest of all God's countries have acquired unto themselves a considerable amount of good poultry, a fact thoroughly demonstrated at the recent World's Fair. This being the case, there is a very large and potent reason why there should be a clearing house for the world's best poultry located in an accessible western city. One of the best poultry show rooms in the world is located in the state of Missouri. A hall in which the Boer War Spectacle, recently at the World's Fair, with its 300 horses and many men, was given complete; a hall that receives its light from every quarter of the firmament, thus securing equal and even light on all locations in the show room, giving the exhibitors all an equal chance, no matter what the location of their birds. A hall that will furnish showing room for 20,000 birds and still leave room for supply exhibits and seats in its arena balcony. A hall that is located in one of the world's great railroad centers, thus assuring exhibitors adequate transportation facilities at lowest freight and express rates. A hall located in a thriving, hustling, up-to-snuff city that has ever shown itself able and willing to properly house, entertain and care for all its visitors. In fact, Convention Hall, Kansas City, Mo., is the natural location for a great international poultry show. The faithful breeders of Kansas City and its immediate vicinity have a show organization, and they have been conducting a successful show each season at Kansas City. They believe that this show should be enlarged and strengthened until it becomes of international importance. Their present organization is "The Kansas City Fanciers' Association, Incorporated;" a stock company incorporated for \$2,000, divided into 2,000 shares with a par value of \$1 each. No one man or clique holds a controlling interest in this association, and its officers and directors do not receive any monetary compensation for their services. It was organized and is managed for the sole purpose of advancing the interest of and in poultry in this central western territory. This organization desires to number among its stockholders every breeder and dealer in poultry products in this territory and to that end, would ask you all to write to H. H. Borgmann, President, Kansas City, Mo., for any information desired. The Convention Hall show is not to be considered as antagonistic to or in competition with any other show in this vast territory, but should be looked upon as the Great Yearly gathering of all that is best in the poultry world. A show that you can attend, feeling sure that you will there find all the most improved and perfect specimens of every thing that in any way pertains to the poultry industry.

The breeders and others interested in poultry and poultry supplies are the ones who make a poultry show successful. If all of you in this vast territory will make Convention Hall poultry show your

show, identify yourself with the organization, talk show to your neighbors and acquaintances; get your own stuff ready for this show; prod up your slower neighbor or acquaintance, and all of you send what you have and come to the show yourself, where practical, you will make Convention Hall the home of the world's greatest poultry show. Make this show the social event of the year in poultrydom. Make Convention Hall the world's greatest clearing house for good poultry. Make a premium won there worth its weight in gold, as showing to the world, that you have the best that grows in your particular breed, class or variety.

The next Convention Hall poultry show will be held January 24 to 30, 1905. Entry fees, singles 25c; pens \$2; coops, feed and care free.

Write P. H. DePree, secretary, 932 Jackson ave., Kansas City, Mo., for premium list and entry blanks.

Fraternalty yours,

FRANCIS E. BATES,
Press Representative, Convention Hall Poultry Show.

W. R. Wooden of Battle Creek has recently purchased from Hon. George W. Hamm his full strain of Buff Plymouth Rocks.

Mr. Wooden has lately been purchasing an occasional choice Buff Rock with the view of adding this popular variety to his farm, and in fortunately obtaining the flock of such an old established breeder as Mr. Hamm he has placed himself where he can compete with all strong breeders of the variety.

The many years successful experience which Mr. Wooden has had with Buff Wyandottes aptly fits him for obtaining the best of success with the Rocks.

His ample facilities enable him to care for his large flocks of Buff Wyandottes, Buff Rocks and Indian Runner Ducks in the most approved and up-to-date manner.

Attention is called to his ad in another column under the heading "Emmet Poultry Farm."

Mr. Wooden states that his many years' experience has taught him that there is more profit in a limited number of extra fine specimens than in a large flock containing indifferent stock, and as proof of quality invites a visit to his farm.

At the Chicago show, Dec. 1904, R. E. Haeger & Co., of Algonquin, Ill., won the following prizes: 1st, 2d and 5th cocks; 1st and 2d hens; 1st and 2d cockerels, (tie 1st) 2d and 5th pullets; 1st breeding pen; silver cup for largest and best display of Rocks. This great winning was made in a class of 125 Barred Plymouth Rocks. The above winnings, together with their long list made during the past twelve years proves without a doubt that they know how to produce the good ones. This firm makes a specialty of this variety and their stock and the name of Haeger is too well known to the readers of AMERICAN POULTRY JOURNAL to need any further mention by us. They have in course of construction a very handsome catalogue and any one who is interested in this beautiful and useful variety of fowl should write to R. S. Haeger & Co., Algonquin, Ill., for one and mention AMERICAN POULTRY JOURNAL.

Green bone contains meat, blood, gristle, oil and mineral matter in soluble condition.

IF WE CAN ONLY CONVINCE YOU.

The idea of building your own incubator is a new one to most people, and the greatest trouble we find is convincing our prospective customers that it is an easy and simple matter. We are the originators and the first to offer complete, systematic plans for building trustworthy, modern incubators and brooders, containing all of the late improved fixtures. But when we once convince an inquirer and he builds a machine, we never fail to have in him a strong supporter of our proposition. Wherever our machines have been built we have never failed to sell several more in that locality. For example: At the World's Fair at St. Louis a gentleman entered our exhibit, and after carefully looking over the machines in operation, stated that he had been interested in our proposition for some time, had seen our advertising, had written us and received our catalogue, etc., which he admitted were very convincing; but he could not convince himself that he could build an incubator. Several of his friends, he said, were in the same boat. After thoroughly explaining our entire proposition, and showing him a machine open displaying all the parts, I convinced him in five minutes, and sold him five sets of fixtures. He said he was satisfied that his boy, 10 years old, could build

the machine from our instructions, without the least trouble.

Now, we have tried in our ads this year to make them convincing by sincere statements of fact. It is easy to build your own incubator. Try it and prove it yourself.

Our catalogue, "How to Make and Save Money with Incubators and Brooders," explains everything. It is also full of valuable information for all interested in poultry, and may be the cause of saving you many dollars. Remember it is free for the asking. Write for one today, address your letter to Channon, Snow & Co., Dept. C., Quincy, Ill., and your request will be attended to immediately.

Yours very truly,
HARRY A. SNOW.

PAYNE'S ALFALFA POULTRY FOODS.

Mr. G. H. Payne is known as "Payne the Alfalfa Man" all over the West. He is said to be one of the largest raisers of alfalfa in Nebraska, and has made the subject of alfalfa a study for several years and has kept pace with all the modern ideas and developments in feeding.

Clover Meal has long been known as one of the best poultry foods, but Alfalfa Meal is rapidly taking its place, as it analyzes higher in protein and is a much greener food than clover meal.

Alfalfa furnishes the phosphate and mineral matter to make bone, muscle and eggs, and in addition is a great appetizer.

In Payne's pure Alfalfa Meal you have a very valuable food to mix with your grain and other feeds; and in Payne's Alfalfa Poultry Food you have a complete properly balanced ration of everything needed to make chickens grow and hens lay.

We understand the sale of Payne's Alfalfa Foods have been far in excess of their ex-

pectations and we predict a great sale for these products, as they have excellent merits. See their advertisement in this issue and send a trial order, and ask for information, to the Alfalfa Meal Company at Omaha, Neb.

S. D. Lapham, of Dearborn, Mich., writes that he has now one of the finest flocks of Buff Plymouth Rocks in Michigan, having bought the entire flock, supplies and good will of R. G. Collin, of Mt. Pleasant, Mich., including all of his World's Fair winners and many other noted winners. This, together with his own winners, gives him one of the largest and finest flocks in Michigan of over 600 Buff Plymouth Rocks. Work will begin at once on new buildings and it is his intention to have one of the finest and best equipped poultry plants in the country. He is shipping birds to all sides of the earth and is well pleased with the good work AMERICAN POULTRY JOURNAL has done. Mr. Lapham tells all about his stock in his ad in this issue.

Chas. Benington, of West Burlington, N. Y., whose Royal Buff Orpingtons have become noted as winners both for himself and his customers, has some fine young stock for sale, especially cockerels, and in addition to his own strain has made three importations during the past season; also has recently purchased an 80 acre farm which he intends to devote to Buff Orpingtons exclusively, thus being better than ever able to supply the needs of customers. We heartily recommend him and his stock to every one.

Mrs. J. H. Orebaugh, Batavia, Ohio, made a sale of stock to Geo. S. Krucker of Hamilton, Ohio, and he writes that he took at their recent poultry show, 1st and 2nd pullet, 2nd cockerel and 1st pen. He was delighted with his success for his own White Rocks were a little late and did not weigh up to Standard. The first two pullets Mrs. Orebaugh sold him scored 95½ and 95¼ taking 1st and 2nd prize. The last pullet she sold him scored 93. The birds were scored by A. B. Shaner who declared he never had seen finer White Rocks.

Best Display, Chicago, December, 1903

Ackley & Page Strain Is
BEST

We raise our prize winners. We raise more Buff Wyandottes than any two breeders combined. We claim our strain is BEST, and prove this statement by competition at the largest shows. It costs no more to come to us and get stock that will benefit you than to purchase the "just as good."

World's Greatest Exhibition, St. Louis, 1904

On eight entries we won 1st cock, 2d cock, 3d hen, 6th cockerel, 6th pen, an unequalled winning and a remarkable victory over all competitors in the best class of Buff Wyandottes ever shown. More and better stock for sale than ever before. The Buff Wyandottes are the best general purpose breed; best layers, mature quickly and best to look at. Our prices are reasonable and our stock is best. We solicit inquiries. Catalogue free. We please or return your money. Please write us to-day.

Success With Poultry

is a book on successful and profitable poultry raising, containing valuable information for persons engaged in any branch of the poultry business. It has 112 large pages full of information, also illustrations showing how to build poultry houses and coops, which is worth many dollars to the person engaged in poultry raising. It also contains chapters telling how to raise all breeds of chickens, also chapters on raising turkeys, ducks and geese. It is one of the most comprehensive books ever written, and the person who has it will never regret the money spent for it. Thousands of people have made a success of the poultry business on account of this book.

WE WILL GIVE YOU THIS BOOK

We will give you this valuable book and send The Farmers' Record 52 weeks for \$1, or send us four subscribers at our special club price of 25c each.

The Farmers' Record 5 Montgomery Bldg., Milwaukee, Wis.

Carver & Avey, Columbia City, Ind., won at the St. Louis show, Oct. 23 to Nov. 5, on Partridge Wyandottes as follows: First cock, first pen and second pullet on three entries.

THE CHRISTMAS AMERICAN BOY.

The American Boy for Christmas will delight the boy's heart from its front cover design, representing a young hunter, his dog, gun and game, clear through to the last page. It contains 79 illustrations to illustrate 91 different stories, leading articles and items of interest to boys. As especially appropriate to the Christmas season are: "Father Lanute's Prize," by Lillian V. Lambert; "Kersey," by Evelyn M. Wood Lovejoy; "Uncle Sam's Santa Claus" and "Distributing Christmas Presents in the Navy." Other stories and leading articles are "The Pathway to Success," being an interview with ex-Senator T. W. Palmer, of Detroit; "A Message to American Boys," by Governor Montague, of Virginia; the first two chapters of Kirk Munroe's new story, "For the Mikado"; "James McGregor Billings' Moose Hunt," by Curwood; "True Heroism—A Talk With Boys," being the last contribution from the pen of the late G. A. Henty; "Basket Ball," by George T. Hepbron, Secretary Amateur Athletic Basket Ball Committee; "Uncle Sam's New Pupils," describing how Uncle Sam is teaching young Filipinos in this country; "Skating," by George D. Phillips, winner of twenty-two American championships for speed and figure skating; "An Elephant Hunt that Failed"; "The Champion of the Lake," by William Heyliger; number two of the "Among the Birds" series; "General Nathaniel Greene," a biography by Marianne G. Spratley; "The Franks of Jimmy Lane," a humorous story by Jonas Juton; "A Feline Fury," an animal story by Clarence Hawkes; "Prisoners of the Tide," a sea story; further chapters of "My Four Years at West Point," by a graduate; "Playing Push-Ball," by W. Frank McClure; installment number five of "Clever Work with the Pocket Knife," by John L. Dougherty, and in addition smaller articles too numerous to mention. All the regular departments, namely: Stamps, Coins and Curios, Amateur Journalism, Money Making, Puzzles, The Order of The American Boy, and Boys' Books Reviewed, are included. \$1.00 a year. The Sprague Publishing Company, Detroit, Mich. The thousands of friends which "Wee Macgregor" has made in America will want to read Mr. Bell's new story in the December Woman's Home Companion, "Wee Macgregor Goes to the Sunday-School Soiree." It is an inimitable bit of humor.

THE CHRISTMAS DELINEATOR.

The December Delineator, with its message of good cheer and helpfulness, will be welcomed in every home. The fashion pages are unusually attractive, illustrating and describing the very latest modes in a way to make their construction during the busy festive season a pleasure instead of a task, and the literary and pictorial features are of rare excellence. A selection of Love Songs from the Wagner Operas, rendered into English by Richard de Gallienne and beautifully illustrated in colors by J. C. Leyendecker, occupies a prominent place, and a chapter in the Composers' Series, relating the Romance of Wagner and Cosima, is an interesting supplement to the lyrics. A very clever paper entitled "The Court Circles of the Republic," describes some unique phases of Washington social life is from an unnamed contributor, who is said to write from the inner circles of society. There are short stories from the pens of F. Hopkinson Smith, Robert Grant, Alice Brown, Mary Stewart Cutting and Elmore Elliott Peake, and such interesting writers as Julia Magruder, L. Frank Baum, and Grace MacGowan Cook hold the attention of the children. Many Christmas suggestions are given in needlework and the Cookery pages are redolent of the Christmas feast. In addition, there are the regular departments of the magazine, with many special articles on topics relating to woman's interests within and without the home.

MUSIC AS A STIMULANT.

The experiments of Ginet and Conrtier were conducted with a view to determining the effect of music upon breathing and upon the action of the heart, writes Gustav Kobbe in Good Housekeeping. It was found that lively major chords, without relation to melody, quickened breathing. Melodies, grave or gay, caused rapid breathing. The respiration approximating its time to that of the music. Rallentando and diminuendo effects made the breath come more slowly. Single notes without tune accelerated the heart's action, but melodies quickened it still more, operative pieces resulting in the quickest action. These experiments would seem to show conclusively the stimulative effect of music.

THE YOUTH'S COMPANION IN 1905.

It is impossible even to summarize in a single paragraph the many and varied attractions which The Youth's Companion announces for the coming year.

A series of articles planned to interest especially the forty-five millions of Americans who look directly to the soil for their subsistence, will treat of "New Fields for Young Farmers," "The Sanitation of the Farm," "The Future of American Cotton," "How Women Make Money on the Farm," etc.

Seven serial stories and 250 short stories by the most talented and popular American writers of fiction will form part of the contents of the new volume for 1905.

Full Illustrated Announcement describing the

principal features of The Companion's new volume for 1905 will be sent with sample copies of the paper to any address free.

The new subscriber who sends \$1.75 now for a year's subscription to The Companion receives free all the issues of The Companion for the remaining weeks of 1904, also The Companion "Carnations" Calendar for 1905, lithographed in twelve colors and gold.

FOR THE YOUNG HOUSEWIFE.

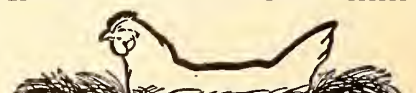

The young housekeeper will be interested in a series of papers on "The Making of a Housewife," beginning in the January number of The Delineator, in which useful housewifely knowledge is embodied in such entertaining form that one is likely to forget that she is studying domestic matters. Other topics in the same number, that will appeal to the housekeeper, are illustrated center-pieces for New Year's Day and beverages for the holidays attractively served, cakes for New Year's gifts, also illustrated, and a number of recipes for novel refreshments for the holiday season.

The Christmas number of Scribner's Magazine is unusually beautiful in its pictures, both in color and black-and-white, and is filled with sketches and short stories that are not only amusing and entertaining, but are good literature and full of character, as well as adapted to the Christmas season. Specially noteworthy art features are the colored frontispiece, by Maxfield Parrish; the illustrations in color for some "Scenes from the old Ballads," by Beatrice Stevens; the drawings, by Walter Appleton Clark, showing Christmas scenes in an old French village; a drawing of a mother and child in colors by Sarah Stilwell, accompanying a poem by E. S. Martin, and the beautiful colored cover by David Ericson.

A valuable chapter in the history of evolution is contributed to the January Century by Henry Fairfield Osborn, Da Costa Professor of Zoology in Columbia University, and Curator in the American Museum of Natural History, dealing with Ichthyosaurs. Almost simultaneous discoveries in America, in Central Wyoming, and Europe, illustrating with remarkable clearness the evolution of fitness, influenced Mr. Osborn to write of a period in natural history which he finds of singular fascination. The illustrations, it is said, will be of special interest.

Dawson Bros., Franksville, Wis., write: "At the Wisconsin State Fair we won the following premiums on poultry: First on Toulouse gander and goose; first and second on African gander and goose; second on White China gander and goose; second on Brown China gander and goose; second on Embden gander and goose; first and second on Pekin ducks; first and second on Indian Runner ducks; first on Muscovy ducks; second on Aylesbury and Cayuga ducks; second on Pea fowls; first on Buff Leghorns. Sharpe Butterfield was the judge. We also have a fine lot of stock bred from winners at the Pan-American, Kenosha, Chicago, Springfield and Milwaukee poultry shows.

BOYER'S BREVITY SYMPOSIUM.

A Little Egg Gossip—About Broilers and Roasters—Turkey Culture— The Market Duck—The Feed- ing Question—Notes in Passing.

Written by M. K. Boyer, Associate Editor A. P. J.

A LITTLE EGG GOSSIP.

A great deal of deception is daily practiced in the egg business. Be above dishonest practices. Honesty will win every time.

Is there any food product of more importance to the community in general than the production of the hen? asks J. E. Beyer.

Eggs are injured by washing. It gives them a frailer shell. Washed eggs will not keep so well, neither will they hatch so well. Wipe off the dirt with a moist woolen rag, but no more.

Beware of the hidden nest. Gather the eggs several times a day. The farmer comes across a hidden nest in the shed, or in the woods. He finds a dozen eggs, more or less, in it. How can he guarantee the age of those eggs. But, generally, they all go into the fresh egg market. The result is complaint about rotten eggs. Never sell an egg you cannot guarantee.

ABOUT BROILERS AND ROASTERS.

Adopt a trade mark. It will avoid deception, and it cannot be counterfeited.

Small roasting fowls are best in demand. There are more small families that buy chicken than large ones.

Ship the day you kill. Do not hold over your dressed birds longer than is actually necessary. The sooner they reach the kitchen the better will be their quality.

It is conceded that the best quality of meat on a fowl is found on the breast, says Prairie Farmer. Hence, all who seek for first-class table fowls should select the breeds which have the greatest amount of meat on the breast.

Tag every carcass. It is an excellent advertisement. If you are selling a prime article the consumer wants to know who you are, so that they may be able to call for your goods.

Common stock do not as a rule make broilers or roasters. Individual birds may be all well enough, but as a flock they will not give a uniform and attractive appearance.

TURKEY CULTURE.

Large birds realize more per pound in proportion than do the smaller ones.

After turkeys are about eight weeks old, they do better if allowed to sleep out in the open, with no covering over them, than if put in a warm, close house.

Unless the stock birds are large, it is

regulate the commencement of their laying by the feast of Candlemas, so turkeys always lay their first eggs on Good Friday, regardless of the movability of the fast. But it is generally the case that they begin laying from March 15 to the end of the month.

THE MARKET DUCK.

The duck seldom becomes broody.

Ducks love to stay out all night in their runs.

Ducks should never be shut up in a close building.

Pekins are good breeders even at four years of age.

Cleanliness is an important factor in the duck house as in the hen house.

Have the drinking trough deep, so the

Shetland Ponies raised on the Farm of Geo. A. Heyl, Washington, Ill.

almost impossible to get the young ones to a good weight. It is best to purchase the largest, and finest stock obtainable to breed from.

Turkeys like to roost as high as possible in the house; therefore, the perches should be on a level to prevent them breathing foul air, as they are more subject to roup and cold than any other fowls.

Old henwives assure us that as geese

As a rule the largest ducks are not the best breeders.

duck can get its head in the water. Neglect of this will result in sore eyes.

Duck eggs for hatching should not be kept over one week. The fresher the better.

The first importation of Pekin ducks to this country from China, was made by J. E. Palmer, of Stonington, Conn., in the spring of 1873.

Something
New

Strathmann's Poultry Yard Seeder

A machine any one that keeps a dozen chickens ought to have. The extra profits of same will pay for seeder in 1 year. Its weight is 30 lbs., hgt. 9 ins., width, 18 ins., sows two rows 10 ins. apart and cultivates your ground. Will do what all poultrymen and journals say. Keep your chickens scratching. For sale by all leading poultry supply houses. Send for circular. No gearing, no levers; nothing to get out of order. Any boy or girl can operate same.

**Extends Greeting and Wishes Everybody a Happy
and Prosperous 1905.**

Hare-Curtis Hygienic Brooder. 60 to 75 Chicks. Price Complete \$7.50.

Storm King Outdoor Brooder. Two Sizes, 50 and 100 Chicks, \$6.00 and \$8.00 each.

New Year, New Goods; not only new goods, but greatly improved old ones. The past year (1904) has been by far the most successful and progressive in the history of this company—and we have made it our business, in the past, to "set the pace."

"Competition is the Life of Trade"

and for the year 1905 we challenge competition, both as to quality and prices. Additional to a removable top diaphragm; a "split" or double lower diaphragm, also removable; a solderless, smoke-proof heater; a rigid bowl, seamless bottom lamp, and a self-locking lamp support, attachable without screws, the

Thermostat and Regulating Device

of the 1905-pattern, Standard Cyphers Incubators embodies the following improvements:

- 1.—It is equipped with an adjustment nut, which is instantly effective without throwing the damper wide open.
- 2.—It has a cubical counterpoise weight which is held securely in place by two lock nuts—one on either side—is locked in position at the factory, is not to be moved by the operator and cannot work out of position in shipment.
- 3.—It has a self-placement device for connecting rod so that regulating bar and thermostat may be quickly and infallibly connected.

- 4.—It has a base casting attached in correct position at factory, making it a permanent part of the incubator and rendering it impossible for customers to locate the regulating arm out of line; also holding the arm firmly in the right position.
- 5.—It possesses a perfect alignment of all holes, which are punched with steel dies, rendering misconnections impossible.
- 6.—All parts are made in exact duplicates so that in case of accident or breakage they can be replaced and will fit perfectly.

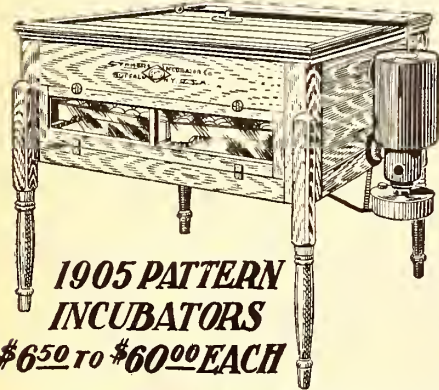

The Patented, Exclusive Features

guarantee all Standard Cyphers, Patent-diaphragm, Non-moisture, Self-ventilating and Self-regulating Incubators, sold under registered trade-mark, either by this company or its authorized agents, as follows:

of the Genuine Cyphers Incubators, together with the valuable improvements embodied in the 1905 pattern, place us in a position to positively warrant and guarantee all Standard Cyphers, Patent-diaphragm, Non-moisture, Self-ventilating and Self-regulating Incubators, sold under registered trade-mark, either by this company or its authorized agents, as follows:

1905 Guarantee.

That each and every Standard Cyphers Incubator we send out will do satisfactory work in the hands of the purchaser, provided he will give it a fair trial, or it can be returned to us, within (90) ninety days, in good repair, less reasonable wear, and purchase price will be refunded.

**1905 PATTERN
INCUBATORS
\$6.50 TO \$60.00 EACH**

The Cyphers Company's New Policy.

This company, under the present management, both as a matter of pride and as a matter of profit, is determined to serve faithfully the interests of its customers to the very limit of its ability. In no other way can it hope to win their confidence and retain their patronage. As buyers they are interested in high grade goods at low prices. Therefore, to supply them with first-rate quality, at the lowest prices consistent with safe business methods, is the best possible way for us, as manufacturers, to deserve their confidence and merit a liberal share of their trade.

It is the habit of the business world to try and enlarge its profits to the greatest possible extent—and pocket the proceeds. Cyphers Incubator Company is now conducting its business on a different plan. For the coming season it positively will share its profits with its customers.

As a direct result of the extraordinary progress made by this company during the past fifteen months, we are able to announce for 1905 a very substantial reduction in the prices of Standard Cyphers Incubators. This is made possible by a satisfactory saving in "cost of production," as the result of increased capital, a larger manufacturing plant, improved machinery and better factory organization.

For a number of years the Cyphers Company's Incubators have been leaders in popular esteem, leaders in numbers sold, leaders in hatching results, leaders in quality of materials and workmanship. Of all the leading attributes of Cyphers Incubators the one in which we have taken the greatest pride is quality and this is the attribute we have most carefully guarded in all our manufactures for 1905.

In keeping with this company's new policy we now offer our customers, in the shape of reduced prices on our Standard Incubators, the large savings we have accomplished lately in their manufacture. For 1905, regardless of consequences,

Our \$14, 60-egg size incubator will be sold for \$12.00.
Our \$20, 120-egg size incubator for - - - \$17.00.
Our \$29, 220-egg size incubator for - - - \$24.00.
Our \$37, 360-egg size incubator for - - - \$30.00.
Our \$58, 440-egg size double-decker for - - - \$48.00.
Our \$78, 720-egg size, double-decker for - - - \$60.00.

In addition to the foregoing we are offering for 1905 two special, low-priced incubators at \$10.00 and \$6.50 each, the Farm-Economy (100-egg capacity) and "Boy's Choice" (50-egg capacity), respectively; also two new styles of brooders, the Storm King Outdoor Brooder, two sizes, which sell at \$6.00 and \$8.00 each, holding 50 and 100 chicks respectively, and the Hare-Curtis Hygienic Brooder, a new departure in brooder construction that we believe will prove a great boon to poultrymen—see opposite page.

Five Styles of Brooders for 1905.

The Hare-Curtis Hygienic Brooder marks a new departure in brooder construction and we believe will work a revolution in the method of raising chicks by artificial means, both as regards the use of individual brooders and in the construction of brooding house beating systems. This is an indoor brooder for

Mid-Winter and Early Spring Use,

which utilizes perfectly the "diffusive principle" of ventilation, does away with the possibility of "trapped" dead-air and insures safety and comfort of chicks. **Specially endorsed and recommended** by Mr. Curtis, president of this company, as a device to which he would unhesitatingly entrust chicks hatched from eggs laid by the finest standard-bred stock, **no matter how valuable.** Dimensions: floor space, 42x32 inches; depth of body, 12 inches; inner cover, 27x22 inches; diameter of hot-air reservoir, 20 inches; inside runway for chicks, 32x15 inches; outside runway, 24x18 inches. **PRICE**, complete with trade-marked thermometer, rigid bowl, seamless bottom lamp, etc., shipped k. d. at lumber rates, **\$7.50.** See illustrated description and numerous testimonials in 1905 catalogue. In successful use three years. Twenty thousand chicks raised in them last season.

1905 Portable Poultry Houses:

Hare-Curtis Self-Locking, 4-Section, Portable Poultry House.

An all grain, sound grain, balanced ration. Feeding it insures healthy fowls, fertile eggs and lots of them. Is fed in litter and promotes exercise.

Cyphers Company's Specialties

Please bear in mind that every article we list here is of our own manufacture. They embrace only such articles as the poultry raiser needs for his best success. About what goes into these goods and are in a position to guarantee their quality.

Special Winter Ready-Mixed Poultry Foods.

Cyphers Scratching Food.

An all grain, sound grain, balanced ration. Feeding it insures healthy fowls, fertile eggs and lots of them. Is fed in litter and promotes exercise.

Cyphers Laying Food.

A palatable ground-meal mixture. Analyzed and balanced for heavy egg yield. In addition to grains, contains meat and clover. Fed as mash.

Cyphers Chick Food.

A complete ready-mixed food for chicks. Made of steel-cut, sound grain, free from waste. No other food will raise an equal percentage of chicks.

NOTE:—These foods are balanced rations for special purposes. **Ground and mixed in our own mill** by experts in poultry feeding. Guaranteed free from all waste products. Made entirely of sound, wholesome grains and seeds. **Put up in sealed bags bearing the Cyphers trade mark.** See that lead seal is unbroken.

Full-Nest Egg Food.

60 Feeds for 1 Cent

The success of this tonic and conditioner has been remarkable. It increases egg production, promotes health, insures vigor in fowls and fertility of eggs. In addition to medicinal seeds, vegetable extracts and mineral salts, it contains, in a highly concentrated form, the necessary animal food for egg production. Takes the place of bugs, worms and insects in the fowl's diet and the scraps and pepper mother used to use."

Cyphers Roup Cure.

Cure Guaranteed.

The one certain remedy for roup in all forms. Prevents and cures common colds, discharge from nostrils, "swelled head," canker, etc., in all poultry. **Cure guaranteed or your money back.** Is used by dissolving in fowls' drinking water; they take their own medicine. 50c package makes twenty-five gallons of medicine. Sold by twenty-five hundred local dealers. Accept no substitute. Price: small package 50c, large package \$1.00. We pay postage.

Cyphers Medicine Case.

Guaranteed Efficacious.

Ten standard poultry remedies in a strong, light-tight case. Recommended by the highest medical authorities and used by the regular profession. Remedies are in tablet form and are given the fowls in drinking water. You may avoid a severe and costly scourge by having them on hand. Full directions on each bottle. Guaranteed perfectly safe. Will cure all the common ailments of poultry.

Standard Lice Killer and Disease Preventive.

During the winter months, when fowls are confined in close quarters, there is great need to disinfect their quarters—more so than at other times. **Don't neglect this work.** We especially recommend:

Cyphers Lice Paint.

It Kills. Not Merely Drives.

Kills all lice and parasites on poultry and other stock. Easy to use, perfectly safe, extra strong, free from adulterations and guaranteed to do the work. Agents wanted in every poultry neighborhood.

Trade NAPCREOL mark

The Standard Disinfectant.

A non-poisonous fluid that kills germs, destroys odors and prevents disease. Used for poultry and in the household. Full strength. Guaranteed positive cure for scaly legs. Ask your dealer or write us.

Latest Poultry Books Cyphers Series on Practical Poultry Keeping. Endorsed by leading authorities as the best books published to date for poultry keepers. 7 in number. 80 to 112 pages, 8x11. Profusely illustrated. Write for list and particulars. **Additional** to the foregoing, we manufacture and offer for sale **Alfalfa and Clover products; Safety Brooder Stoves; Revolving Egg Cabinets; Three Styles of Drinking Fountains; Dry Food Hoppers; Grit and Shell Boxes; Nodi Charcoal (in cartons); Poultry House Heaters; Brood Coops; Chick Shelters; Pedigree Trays; Pedigree Nest Boxes; Water Proof Sheetting; Save-All Egg Preservative; Fumigating Candles; Ovinaphol Nest Eggs; Caponizing Instruments; Anti-Lice Roost Hangers; Leg Bands; Chick Markers; Egg Testers; Drinking Cups; Egg Cases; Egg Packages; Shipping Coops; Food Cookers; Cramping Machines; Spray Pumps, etc., all of which are illustrated and fully described in our 228 page (8x11 inches) 1905 Catalogue and Poultry Guide.**

Six Places of Business.

To facilitate the better handling of our business and to save our customers time and money, we maintain six places of business. Inquiries and orders sent to any of these offices will receive prompt attention. All goods will be shipped from office nearest you, thus saving you time and freight charges.

OUR 1905 CATALOGUE:

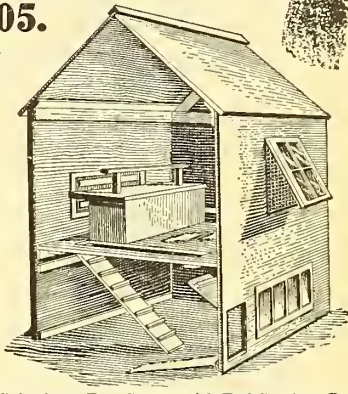

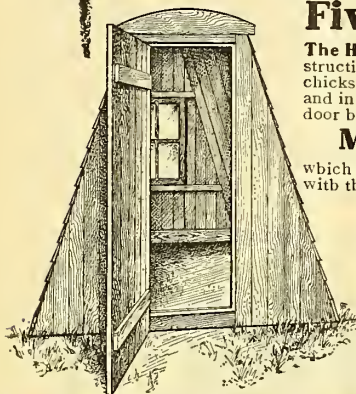

Largest and finest book we have issued; 228 pages, 8x11 inches. Six special chapters on profitable poultry keeping. More than 450 illustrations, including latest portraits of 150 best known authors, judges, fanciers, owners and managers of the world's largest and most successful poultry plants. 120 pages devoted to illustrated description of Cyphers Standard Incubators, Farm-Economy and "Boy's Choice," five styles of brooders, our poultry foods, alfalfa and clover products, poultry books and general poultry supplies—by far the most complete line in the world. Complete book will be ready for mailing January 10th, and will be sent free, postpaid, to every reader of this advertisement, who will send us his name and the names and addresses of two friends or acquaintances who are interested in poultry for profit. Mention this paper and address nearest office.

RHODE ISLAND REDS.

One of the latest breeds introduced to the American poultry fraternity, is the Rhode Island Red; although this fowl originated many years ago, and the Red rooster of the New England poultry yards has long been famous for beauty and pugnacity.

ORIGIN.

It is generally agreed that the parent stock of the Rhode Island Red fowl was a cross of a Chittagong cock on Red Cochin and Red Malay hens. The Chittagongs were essentially the Golden Wyandottes of today; but were longer in body, less erect, and somewhat lighter in shade of plumage color. The Red Cochins were a smooth-legged, medium sized fowl; and differed in these respects from the heavy feathered-legged

it slightly decreased the size and changed the shape some, giving it a rounder and fuller breast than the Single Comb variety.

The Reds are a general purpose fowl. They make excellent dressed poultry, having compact, well shaped bodies, a rich, yellow skin free from dark pin feathers.

The females lay a large, brown egg. As winter layers they are peerless, and in the warmer seasons they have proven a match for any of the mere "egg machines" that have been tried against them. They make good setters and careful mothers, hence are exceedingly valuable for breeding purposes.

As to their economic merits, the Reds, being good foragers, can be kept at less cost than any other breed, excepting possibly the White Leghorn.

R. C. RHODE ISLAND RED FEMALE.

Cochins of today. The plumage color of the Red Cochin females was mostly yellow, and that of the Red Malays a brownish red.

All these fowls were brought from southeastern Asia to Southern Massachusetts and Rhode Island by sailors more than half a century ago.

The comb of the Chittagongs was usually double; that of the Cochins single, and the Malays had a thick, knobby one (such as is sometimes seen even today on Reds). Naturally some of the early specimens of this cross had a rose comb, while others had a single comb.

The best males were usually selected by the farmers and poultrymen in the localities where these fowls existed, and crossed with common hens. The Rose Combs later received considerable Rose Comb Brown Leghorn blood, which gave this variety a better comb, greater activity, and increased egg production, and

SHAPE.

In shape the Reds should conform to the general idea of the American classes, although the Rose Comb variety usually takes more after the Wyandottes, while the Single Comb has more of a Plymouth Rock shape. However, the correct Red shape is something between the two. A long breast bone, a blocky body, and medium short legs, are desirable.

HISTORY

William Tripp, of Rhode Island, did much to develop the Reds in their early days. It is reputed that Isaac Wilbour, of Rhode Island, named these fowls in 1886, but there is good authority that they were called Rhode Island Reds as early as the 50s.

In 1898, a few breeders of Reds met at Fall River, Massachusetts, and organized the Rhode Island Red Club, elected officers, and formulated a standard. This standard was soon afterwards copyrighted and printed. At

Boston in 1901, a more formal description and detailed statement of this breed was agreed upon, and at Rochester, N. Y., last year, application was made for the admission of this breed to the Standard. The Single Comb variety was successful, while the Rose Comb was denied admission by a technicality.

The Reds derive their name from one striking characteristic—the brilliant beauty of the male bird. But they are hard to breed for color, and easy as to other characteristics. The best results in breeding are obtained in mating a dark, rich, even bay colored male with medium colored females, avoiding smut, or what is worse, white in undercolor or wing flights.

CONCLUSION.

The great popularity of the Reds in the East is to most people in the West unexplainable, but to those best acquainted with the good qualities of the breed, it is evident that merit alone is the

that the secretary be instructed to cast the unanimous ballot for the Association for the admission of the Single Comb Rhode Island Reds to the Standard. It was duly seconded and carried. The vote was cast and the breed declared admitted to the Standard.

The only thing said about any other variety of Rhode Island Reds was the following by Mr. Eugene Sites: "I had a letter yesterday from Mr. Buffington saying that he is opposed to us admitting the Single Comb Rhode Island Reds. He thinks if admitted, it should be as a Pea Comb."

OUTDOOR ROOSTING.

Our Langshans and Rhode Island Reds have roosted on trees and sheds up to December 10, and half of the Pullets laid eggs. Ice four inches thick on river, no frosted combs, are as hardy as a bird. This kind of natural way of

R. C. RHODE ISLAND RED MALE.

cause. As a fancier's fowl, the Reds have made rapid strides in recent years, and I believe they will breed as true to color in a short time as any of the colored breeds. I predict a great future for them, and firmly believe they will supersede many of the old and popular breeds of today.

E. E. BECK.

(By the Editor.)

Mr. Beck is mistaken in his assertion that at Rochester last year application was made to the American Poultry Association for admission of the Rhode Island Reds to the Standard of Perfection, and that the Single Comb variety was successful while the Rose Comb was denied admission by a technicality.

The record shows that at the Rochester meeting applications were presented for the admission of but two breeds: the Single Comb Rhode Island Reds and the Pea Comb Buckeye Reds. After quite a bit of discussion, a motion was made

roosting prevents roup and colds. One heating stove is corn and oats and beef the egg food. No mash is feed nor egg forcing foods. Gradually make your Pullets used to all outdoor conditions for health. I have no stock to sell. All sold I care to spare.

FAIRVIEW FARM AND ITS NOTED WHITE LEGHORNS

**Methods Employed by a Successful Plant
—How a Heavy Laying Strain was
Built Up; Also Excelling in
Standard Requirements—
Annual Profits of Several
Thousands of Dollars.**

The methods and principles which have largely contributed to the wonderful success of Mr. J. H. Blanchard in the breeding of S. C. White Leghorns:

Mr. Blanchard is today one of the most successful and prominent breeders in America, and what he has accomplished as a breeder of Standard-bred poultry should act as an incentive to every man or woman in our country.

Some twenty-two years ago Mr. Blanchard made his entry into the poultry field by installing on his fruit and truck farm thirty Single Comb White Leghorns, and since that time the White Leghorns have reigned supreme upon Fairview Farm, and during these years a wonderful improvement has been made in the Standard and utility qualities.

From this small beginning of thirty fowls this plant has been increased to

his facilities for doing business were enlarged as fast as the profits from the business and his experience would allow.

Until two years ago Mr. Blanchard had never shown his Leghorns personally, but had furnished winners for leading shows all over the United States and Canada.

The Laying Houses upon Fairview Farm are worthy of special mention here. The system of ventilation is probably the most complete and practical in use. Mr. Blanchard was the first person to use this system of ventilation and has been in constant use by him for twelve years; he believes it to be a long step forward in poultry house construction. We will give a general description of poultry houses here, incidentally giving the plans of ventilation of laying houses referred to above. Counting the double poultry houses as two, there are twenty-five of these laying houses upon the place, with a capacity of 1,500 lay-

tight board floor is then laid on the sills. Part of the houses have a single floor of one inch matched lumber while the most of them have double floors with Black Neponset sheathing paper between. Were informed that these double floors were the most satisfactory.

We come to the manner of ventilation now. Overhead on the plates are joists 2x6 notched down two inches on the under side and spiked to the rafters at the sides. On these joists is laid a floor of cheap lumber with wide cracks, say one to one and one-half inches left between each board. This constitutes the upper floor. In each peak or gable is a door as large as will swing under the roof. Roof is one-third pitch, cedar shingles. Over the loft floor there is kept loose straw to the depth of about one foot. In coldest weather when the doors and windows have to be kept tightly closed the vapor thrown off by the fowls passes up through the cracks in the loft floor,

SCENES ON THE FARM OF H. J. BLANCHARD, THE WHITE LEGHORN SPECIALIST, GROTON, N. Y.

its present large capacity, and the Blanchard strain has come to be known as one of the leading strains of heavy layers. Their reputation as an egg-producing strain cannot be excelled by any other strain in existence and have few equals. This fact has played an important part in Mr. Blanchard's success. He realized from the start that the first thing to be sought after was an abundant supply of eggs and began at once to breed from his best layers, keeping an accurate account of individuals. This plan of breeding soon had its effect in a perceptible manner, and profits became correspondingly larger. Each year the size of the flock was increased, extra buildings were erected and

ing hens, also buildings and facilities for hatching and raising 2,500 to 3,000 chicks.

The laying houses referred to are mostly 16 feet wide by 40 feet long, and 7½ feet high from bottom of the side, which are 6x6 to top of plates, which are 4x4, with gable roof. Sills are about 30 inches from the ground on stone walls, cedar posts, and in a few instances buildings rest on posts nailed inside the sill extending to the ground, thus making a tight basement with windows in the south side. This basement is made accessible for the fowls from the inside and provided with dry dirt for dusting and wallowing place for the fowls during winter and summer. A

which we referred to above, and is absorbed by the straw instead of being condensed on the walls in the form of frost. On warm days the gable doors are thrown open and the air passing through dries out the loft and straw and ventilates the whole building without any draught on the fowls below. Most of the poultry houses on Fairview Farm are double walled with dead air space between. The basement under these houses being well lighted by the windows in the south side, are not infested with rats or other vermin. In summer, too, the birds greatly enjoy this basement as a resting and wallowing place in stormy or very warm weather.

This plant is equipped with all modern conveniences, such as electric lights, a complete water system with non-freezing hydrants just outside the door of each poultry house. An eighty-five barrel tank covered by a frost-proof building is kept full of pure water from a nearby artesian well, by a wind-mill pump, and the water carried all through the plant by galvanized iron pipes 3½ to 7 feet underground. There is also ready at all times a fifty-two gallon tank of hot water.

Mr. Blanchard's trade in market eggs has grown to enormous proportions, and he has to buy eggs from neighboring poultry farms to help him out on his New York City trade. This trade he has built up by supplying strictly fresh eggs at all seasons of the year.

Mr. Blanchard's system of feeding his laying stock is as follows: In early morning a very scant ration of whole mixed grains is scattered in the litter on the floor of the houses. They are then watered, and the water is warm in cold weather. Next they are given

mangel wurzel or cabbage, cut in halves and placed on the floor. This keeps the birds busy most of the forenoon. At noon they are fed a warm mash composed of ground corn, oats and wheat bran, about equal parts by measure, to which is added about three pounds of beef scraps for each one hundred hens, and a little oil meal. The whole is then thoroughly mixed dry. About two quarts of cut clover for each 100 hens is put in pails and hot water turned on until thoroughly soaked. The clover and hot water are turned on the dry mixture and warm skimmed milk added if convenient; if not, more hot water, and the whole mass is then mixed un-

to build up a strain of large, vigorous, hardy, single comb White Leghorns of standard quality, that would lay the greatest possible number of choice eggs. Such a strain as this cannot be built up in a year or two, but it takes many years of patient, painstaking, skillful selection and mating. He introduces new blood into his flock as often as found necessary, by the purchase of the best stock to be found.

By combining the fancy with utility Mr. Blanchard has built up a business that any successful business man might well be proud of.

HELPS FOR A BEGINNER.

Every man makes mistakes, but men without certain qualities have seemingly more ill-luck than others. However,

the experience or advice of a successful fancier and at once try to employ it in his case without first considering the matter carefully. I do not mean by this that the writer of that article did not put in it the truth but under different circumstances methods peculiar to themselves have to be employed, and also the reader if acting promptly may easily mistake the meaning and thus by making changes on his plans so as to bring misfortunes his way.

Before adopting any new plans the poultry man should ask himself first: Am I succeeding with my present plans second. How much changing would be necessary, and am I in the same conditions where those plans have been successful, and lastly after considering these carefully, would it pay me to change?

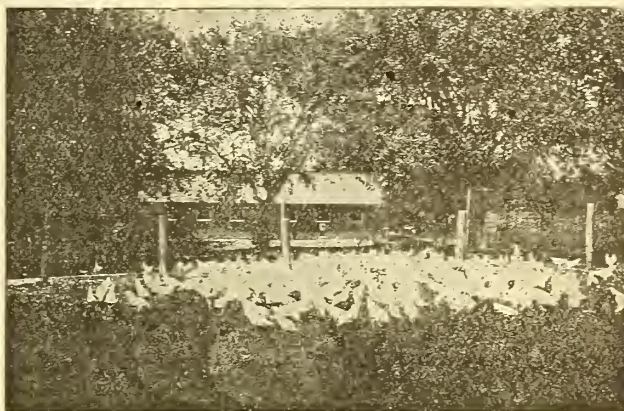

H. J. BLANCHARD.

til it is moistened. The mash is then fed in troughs; all the birds will eat with a relish. Towards night a ration of whole mixed grains—corn, wheat, oats and buckwheat—is fed in the litter, all they can eat.

In December Mr. Blanchard selects most of his breeding stock for the following season, but he always has one or more pens mated up, as he receives orders for eggs every month in the year.

The chicks hatched on Fairview Farm are uniform and strong, being bred from vigorous parents, properly hatched, brooded and fed, and given free range. All hatching and rearing of chicks is done with incubators and brooders.

It has been Mr. Blanchard's ambition

A Flock of White Leghorns on the farm of H. J. Blanchard, Groton, N. Y.

in this age the terms luck and ill-luck are becoming more and more taken place by "common sense." This is true certainly with poultrymen. In some cases the term ill-luck may be used with truthfulness, but in the majority of cases we find a reason for it in the fact that the misfortunate did not have the amount of common sense which his circumstances required him to use. So that the best way to do is to obtain and cultivate common sense wherever a chance to do so presents itself.

There are many ways in which the poultry man may do this, if he will. One of the most important ways is to form his own opinions after reading and conversation.

How often the fancier fails to do this. How many on picking up a paper read

This is one of the great stumbling blocks to successful poultry raising that beginners have to contend with. I have found it a very good plan to cut out articles from poultry papers if their contents prove to be something helpful in my case, and make a scrap book of them. This comes in handy when any information is needed.

Some of the other stumbling blocks are fraud advertisements and testimonies which accompany them. Lack of ambition and energy, and misfortunes which sometimes come without cause.

Some or all of these blocks are met with in the road to success, but if the beginner goes around them instead of falling over them, he will find the goal will be easier and quicker attained.

OUR WHITE LEGHORNS

WON AT ST. LOUIS
Cocks 1st & 3rd—Cockerels 2nd
Pullets 1st—Pens 1st & 5th
Gold Specials, Shape Specials &c. 374 Birds in Class

WINNERS

The Result of Sixteen Years of Line Breeding

Our stock has won not only in the two breeds at St. Louis World's Fair, but has, since 1902, produced winners of all its six breeds for New York, Boston and all other large poultry shows.

Superb Exhibition Birds in condition to enter show ring:
Males, \$10 to \$50 each. Females, \$10 to \$40 each.
Splendid Breeding Birds: Males and Females, \$5 to \$10 each.

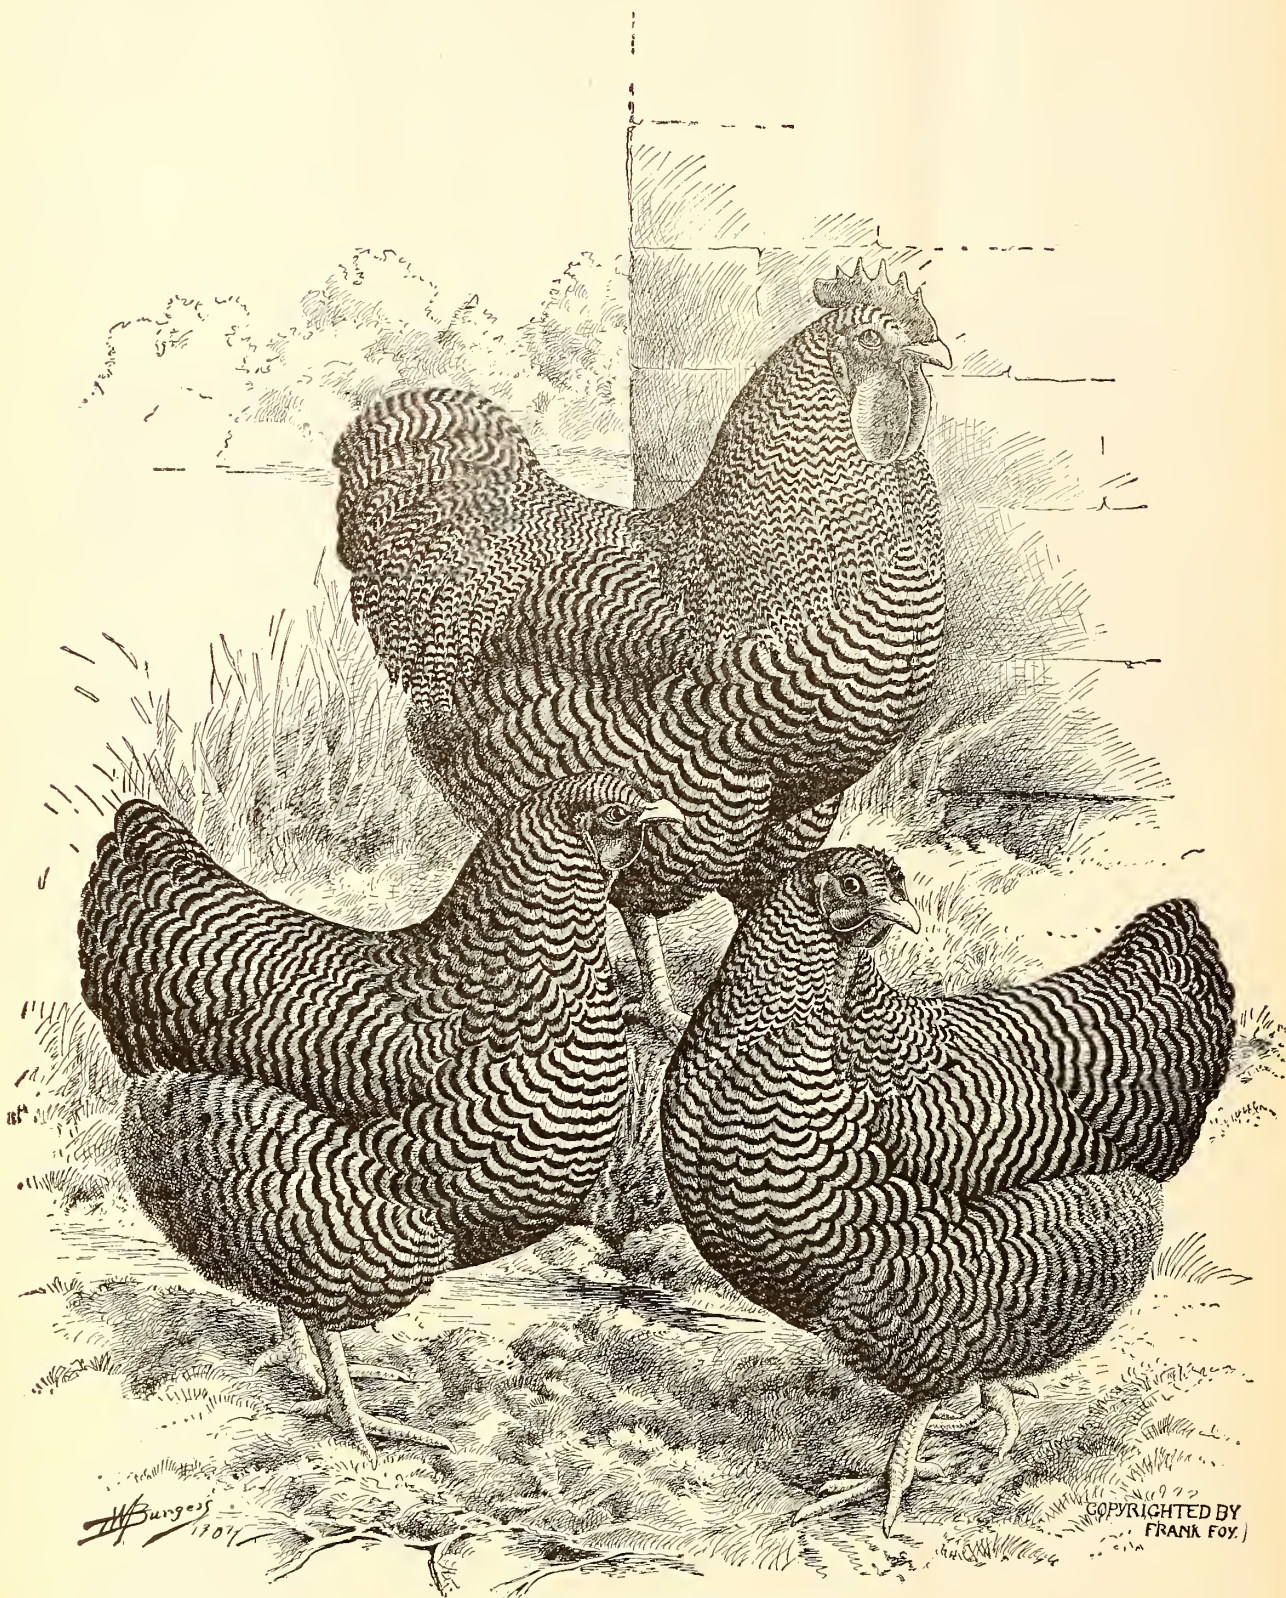

Thousands of Cockerels and Pullets for great egg production, \$15 per pen, carefully mated.
Egg orders booked now—\$5 per 12, straight—from exhibition matings. \$2 per 12, from laying matings.

Our six breeds, the most popular ones:
White Leghorns, White Plymouth Rocks, Barred Plymouth Rocks, White Wyandottes, Black Minorcas, Light Brahmas.

TRIO OF BARRED PLYMOUTH ROCKS.
Bred on the Crescent Poultry Farm, Frank Foy, Proprietor, Des Moines, Iowa.

Frank Foy, The Famous Poultryman, and His Famous Crescent Farm.

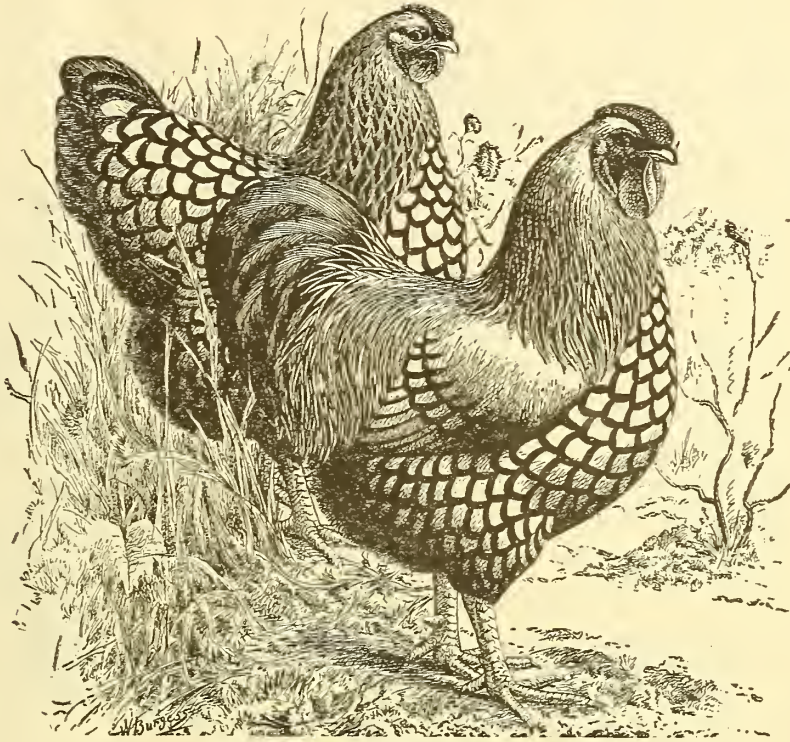

"Out there in Iowa" at Des Moines, is located a man by the name of Foy who by sheer honesty, strict attention to business, and thorough knowledge of everything pertaining to poultry, has in the past five years built up a business

year to manufacture an incubator of his own and call it "The Frank Foy."

This incubator is now ready for the market, and it goes without saying that it will outsell and outpace anything ever offered. It is certainly a wonder and embodies all of the essential points which have for so many years been omitted in all of the other machines.

Mr. Foy puts himself and his reputation behind this hatcher, guaranteeing it in every way, and the purchaser may rest assured that when he buys a "Frank Foy" he is in possession of the nearest

JOURNAL will do themselves a great favor by sending four cents in stamps to F. Foy, Des Moines, Ia., Box B, with a request for a copy of his handsome 84 page book called "Money in Poultry." It contains a wealth of valuable information of intense interest to every one who keeps poultry, illustrates and describes the various breeds in an entertaining manner, tells all about diseases their cure, etc., how to successfully breed and rear all kinds of pure bred stock, in short gives full information on just how to find the "Money in Poultry."

FOY'S SILVER LACED WYANDOTTES.

which extends to every corner of the United States and is now rapidly spreading out beyond its borders.

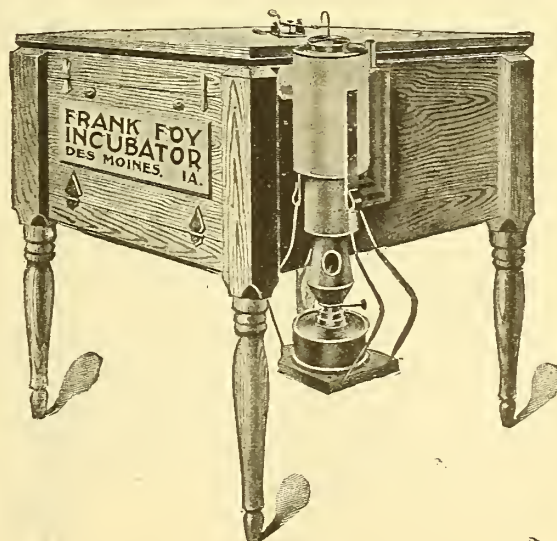

Foy is one of those peculiar fellows who was born honest and has never gotten over it. To be sure he has not tried very hard, in short his efforts have been all in the other direction, to such an extent in fact, that those who know him best and have had dealings with him the longest, say he is a perfect ignoramus on everything pertaining to trickery or double dealing. He says himself that he has no desire for knowledge on these subjects.

It is because of this, because people all over the country have found that what he says can be depended upon, that his business has assumed proportions of which a man might well be proud after ten years of effort, to say nothing of five, which is the time in which Mr. Foy has accomplished it. He is an incubator expert, and probably knows more about artificial incubation and the laws which govern it, than any man in America. Because of this it was but natural that his advice should constantly be sought by his hundreds of patrons who were contemplating the purchase of an incubator as to which machine they should buy. As none of those now on the market fully met his views with reference to what an up-to-date hatching machine should be, he concluded this

perfect incubator ever devised by the mind of man.

The readers of the AMERICAN POULTRY

It is there all right, and all that is needed is one of Mr. Foy's books to enable any one to find it "for sure."

KNOW EACH BIRD.

Every fowl on the place should be appraised according to some standard based upon qualities that each separate bird is actually known to have. No member of the flock should be retained or disposed of unless there is a good reason why that particular bird should or should not be kept longer.

Yarmouth, Me. F. O. WELLCOME.

DRY HOUSES.

In my extensive experience with poultry I find dry houses are far more essential than warm ones. Have the floor of earth, some 6 to 12 inches above the

ground outside, renewing each year, with either a loft above or else heavy canvas doors or windows, which need be the only inclosure during the day when weather is fair. Fowls will keep more rugged and stand more cold without freezing combs or wattles. In real severe weather your doors can be closed or the window drawn.

Belvidere, Ill. C. F. McLAIN.

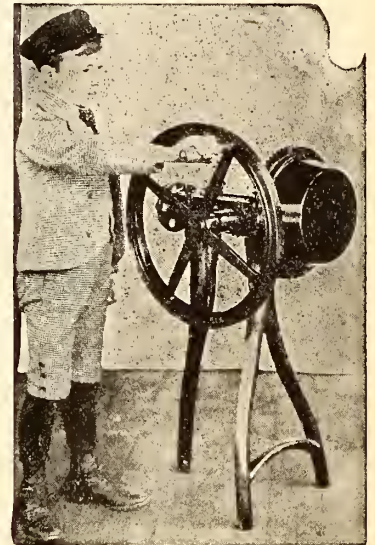

Poultry need carbon, nitrogen and lime, says Dr. J. H. Casey. All these ingredients will be found in green bone.

The first green goose in New York and Boston markets bring from 18 to 25 cents a pound.

GROUND GREEN BONE THE IDEAL POULTRY FOOD.

Fresh cut green bone is the ideal egg-producer of all foods, because it contains in a greater degree all of the constituent elements the hen needs to make eggs. It is especially essential as a winter ration, to take the place of the feed which nature so lavishly supplies to fowls in the summer. Every fowl in the flock will grow stronger and healthier with a regular feed of cut green bone. Poultry, like people, need a variety of foods. They eat cut bone with eagerness. They become more profitable in proportion as they are better fed. Analysis, as well as practical experience, proves that green bone is extremely rich in egg-producing and muscle-making material—nothing equals it in these respects.

One authority says: "The bone cut-

ter is as necessary to the poultryman as his feed mill. It enables him to use an excellent and cheap food, and gives him a profit where he otherwise might be compelled to suffer loss." Experience proves that a Dandy Green Bone Cutter makes poultry pay—it makes hens lay in the winter when eggs are high.

The Dandy is manufactured by the Stratton Manufacturing Co., of Erie, Pa., who will be glad to send you a handsome booklet describing their full line of bone cutters, which they sell on trial and guarantee in every respect with a broad guarantee. Write them before you buy.

N. M. Odell, Wichita, Kas., commences yearly advertising in this month. He made some splendid winnings at the World's Fair, St. Louis, on his Pekin Ducks, winning on an entry of four ducks as follows: First hen, first cockerel and fourth pullet. Mr. Odell also breeds Barred Plymouth Rocks.

AT THE HEART OF THE BUSINESS.

During this cold weather don't forget to give the poultry animal food of some kind as well as grain. It keeps their heads bright and red, signifying health. A few drops of aconite in the drinking water is good. Don't let the cockerels run with the females.

B. S. BECKINGTON.

Garden Prairie, Ill.

VALLE CRUCIS FARM

Breeders of America's greatest laying and exhibition strains of S. C. White Leghorns and White Wyandottes. Our offerings for October and November: 50 choice breeding pens of S. C. W. Leghorns (1904 batch) at from \$10 to \$15 per pen, according to quality. These birds are all from our best matings the past season and are sure to please you. Splendid breeding cockerels of both varieties from \$2 to \$5 each. Remember that our stock has been line-bred for years and is sold on honor. Handsome catalogue free for the asking. Write for it to-day.

DON'T BURN MONEY

SAVE HALF

and get more heat and better light, by using

ACME SPECIAL BURNERS

Made in two sizes, No. 1 and No. 2. The No. 2 will make more heat and light than any No. 3 burner, and use 50 per cent less oil. The Acme Trip burner saves 1/2 the oil for incubator use, because regulator turns flame up or down as needed. Can't over-heat or char the wick. The Acme Wick requires no trimming, is special close woven and twice as thick as other wicks, end encased in seamless metal tube with composition burner tip. As the oil passes through this composition, it is purified and converted into gas, burning with an intense heat and a brilliant light.

NO SMOKE - NO SOOT - NO OFFENSIVE ODOR

These wicks are for the Acme Burners only, and will last from 30 to 60 days for Incubator use and 12 to 18 months for ordinary house use. Acme Burners fit any lamp. Give size of lamp collar when ordering. The Acme Automatic Gas Valve saves 75 per cent of gas for incubator use, because the regulator turns the flame down or up as needed. Burner tip can be located any distance and in any direction from the valve. For instance, burner can be placed under brooder hover and the valve remain on outside where it can be readily connected with regulator. Price of Acme Burner with wick, either size, pre-paid, 75c. Price of Acme Trip Burner with wick, either size, pre-paid, \$1. Price of extra wicks, either size, pre-paid, 10c each, 3 for 25c. Send for our complete catalogue of the Acme Compound Regulators, Acme Automatic Lamps, showing our latest combined damper and flame regulation, Incubator Fixtures, including the famous

How Are They Coming?

I know you are not getting the chicks you should get out of your good eggs if you are plodding along with some of the incubators and brooders I have tried. The trouble is that most incubators and brooders are not practical, common sense, every day working machines. I worried along with them a good many years, for I have raised poultry for profit all my life. They kept me always experimenting. The machines were not dependable. When I had all the "experiences" I wanted I perfected the

Ideal Incubators and Brooders

I made them so that they stopped the frightful waste of eggs I had always experienced. They saved my time. They made my hatches dependable and did away with the constant worry about heating, ventilating and regulating. A good many thousand people have bought Ideal Incubators of me—more last year than ever before. What they say of their success is interesting reading to poultry raisers. They all bought on

Thirty Days Free Trial

I'm always glad to send them out that way because they're always just as good as sold. I have gotten out a grand new book this year—a combination Incubator, Brooder, Poultry and Poultry Supply book. I believe it saves money and makes money for people engaged, like I am, in the poultry business. Write to me at once and let me send a copy. It costs you nothing, I'll pay postage.

J.W. Miller Co., Bx 56, Freeport, Ill.

MADE BY THE MAN WHO KNOWS

IT DOES THE WORK

SUNFLOWER SEED IS VALUABLE TO THE POULTRYMAN.

What will help to make hens lay in the winter time is always an interesting question, not alone to the man who makes chicken raising his specialty, but to the farmer as well, and many are the firms that are doing a nice business selling various preparations which are claimed to bring about this desired result.

It has been our good fortune to make the discovery that the Creator in His infinite wisdom has furnished us with a plant easily grown and which is a good yielder anywhere in the United States, the seed of which we have found when properly fed certainly increases the egg production; and what we believe to be of equal importance is one of the most valuable aids to the fowls during the moulting period. Our attention was attracted by the birds eating sunflower seed purely by chance, and the discovery thus made was followed up by experiments which fully demonstrated what we now proclaim for the benefit of our poultry brethren.

Some years ago we raised a small patch of sunflowers into which one pen of hens were allowed to run, and as the seeds ripened and fell out were quickly picked up by the birds which at that time had just started to moult. This particular pen moulted in half the time required by those not having the seed and new feathers came in quickly and were more glossy and of better texture than the others; these were stronger and commenced to shell out eggs long before, and in greater numbers than those fed in the ordinary way. A narrative of our various experiments, while it might be interesting, we do not think has a place here, so we will simply state results.

Sunflower seed, giving a full feed four times a week, at the same time using other grain sparingly during moulting time, will bring the birds through in half the usual time, with better plumage and in better health than by feeding linseed meal, cottonseed meal or any other preparation we have ever seen or used, and it is nature's provision—nothing artificial about it. We do not believe in feeding "dope" of any kind. Used as an egg food, care must be taken as the seed is fattening and if fed heavily will throw the fowls into a second moult, which, of course, would be serious. For this purpose we get satis-

factory results by giving one full feed of the seed twice a week during the winter time. What we mean by "a full feed" is a handful for each bird.

Now sunflower seed is too expensive if you are obliged to buy it, to be used for chicken feed, but it is easily raised and yields as good or better than corn. So most everybody in our business may produce their own. Of course, this does not include our brother of the "city lot plaut," who has no room to raise anything but chickens and not much room for that. We plant like corn in checkrows, so that the field may be cultivated both ways, thus avoiding hoeing, which would be necessary if planted one way only. After the plants have grown about one foot high we go through and cut out the weaker ones, leaving but one good strout plant in a hill. This is important, as they will not do well if grown together. They should be cultivated until about waist high, when they will take care of themselves until harvesting time. Where large quantities are grown, the heads may be cut off when ripe and run through a threshing machine the same as beans, but where one or two acres only are to be taken care of a very good method is to cut the heads when the seed is dry and nearly ready to fall out, leaving about six inches of the stock on for a handle, and knock the seed out by striking the back of the head (not yours) with a stick. If done at the proper time one or two good raps with the stick will send all the seeds flying out and a good worker can thresh an acre a day. The seed should then be spread out in the sun and frequently turned until thoroughly dry, when they may be run through a fanning mill or winnowed in the old fashioned way, and stored the same as any grain. Last year we supplied seed to poultry raisers in every state in the union and had many orders from Canada, and from the many letters we are now receiving from interested parties it is inferred that we will have to hustle to fill the orders this coming spring. Sunflowers are valuable in many other ways. The seed is sold in cities for parrot food and put up in neat packages brings fancy prices.

The stock contains a fiber from which rope is made. They also contain a pith which is excellent material with which to make life preservers. The corona or bloom furnishes an oil used as a con-

sumption cure and which is now being imported from Russia at a cost of 60 cents per ounce, and if you want some nice kindling wood just cut up the dry stocks into stove lengths and see what a quick fire you can build some cold morning in winter.

EDDY & EDDY,
White Rock Poultry Farm, Maunheim,
Ill.

UNIFORMITY.

Uniformity is a valuable characteristic to establish in any flock. I find by selecting only my best layers for breeders I have produced a strain of uniformly splendid layers. By breeding from good sized, mature specimens I have increased the size of the stock and it is more uniform in size. By selecting breeders from the families that show highest uniform quality I have now a flock very uniform, also in shape and color, and very satisfactory to handle.

VICTOR D. CANEDAY.

Taylor's Falls, Minn.

GENERAL FEED FOR WINTER.

Editor AMERICAN POULTRY JOURNAL,
Chicago.

Dear Sir—We are feeding alfalino, composed of ground alfalfa, meat scraps, blood meal, bone meal and grit, with splendid results, and believe the green food question is settled. Nothing ever took the place of grass and what fowls get on the range as this food.

J. W. EASTES.

Galesburg, Ill., 565 Main st.

We are in a quandary to know by what standard the W. P. Rocks were judged at the World's Fair.

If by the new standard, we are anxious to see a copy, and find the authority for the placing awards at the recent show.

Our present standard says males, comb, single, slightly below medium, set firmly on the head, free from side sprigs. Female, head, medium size, comb, small in size, back broad, breast broad, etc. Legs medium length.

Batavia, O. MRS. J. H. OREBAUGH.

Better results in egg yield and fertility come from those ducks that have bathing water. It gives them exercise and prevents the accumulation of too much fat.

PAROID ROOFING

3 WHY'S for BUYERS EYES

WHY NO. 1

The first reason why you should buy a

GEM INCUBATOR

is because it is a thoroughly reliable hatcher, is constructed in the most approved, substantial manner. It has features that make it the simplest and easiest machine to operate. Thousands sold and every purchaser has only words of praise for the Gem Incubator.

WHY NO. 2

The second reason why you should buy a

GEM INCUBATOR

is because it invariably hatches every fertile egg. And is the only incubator built that has a Removable Chick Tray and Nursery which can be removed from the machine. Send today for free catalog.

GEM INCUBATOR CO.

Box B
Dayton, O.

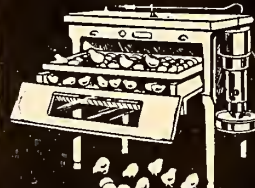

WHY NO. 3

The third reason why you should buy a

GEM INCUBATOR

is because an average of not over 10 minutes in 24 hours is all that is required to take care of it. Women, Boys and Girls can manage a Gem as successfully as the experienced operator and thus make money. 101 other ways fully set forth in our catalog.

THE GEM HATCHES 'EM

EGGS IN WINTER.

Right at the start I will put myself on record as saying the "dope" below is from experience, not theory. First and most essential in getting eggs during the winter period is the breed, and next the feed. You cannot, however, expect very late raised chicks to commence laying until they have matured, consequently it is necessary to get your incubators started very early if you figure on a pullet output. I had youngsters hatched early in January and am convinced that it is very necessary to do this to secure eggs in the middle summer season when most of the old biddies work overtime brooding. Referring to the stress put on the breed. Not being satisfied with the variety I had been keeping for a number of years, purchased Buff Rocks for comparison and the marked disparity in favor of the Rocks won me over at once by their general utility qualities. Having read so many glowing accounts of the Orpingtons added a dozen of the single comb variety and they fully corroborated the statements I had perused in relation to the early laying of the pullets. Last December (1903) having more eggs than we could use, decided to fill a 50 egg size incubator. Forty-five tested fertile. When you consider the extremely severe weather we had at that time, this record is "not bad." The hatch was all over January 17, some 37 lively hustlers being the result. On June 8 (4 months and 22 days) the first pullet, an Orpington, laid and her

sisters followed suit at irregular periods, the Orpingtons, however developing this trait much earlier than the Rocks, although the outcome in eggs was about a stand-off as the former tended to broodiness more and sooner than the latter. These birds kept at it all summer long, but molted late in the fall, whereas pullets hatched a month or two afterwards seemed to have escaped this. The April and May pullets commenced just about this period, so we have had eggs all the time, and lots of them at that. At the time of writing, the forepart of December, we have more than we can use and are supplying non-fertile eggs to several of our neighbors.

As to the feed question, believe the more simple and nearer Nature you get, the better the results. Have read both sides of the mash idea, that is whether to feed at night or morning. Both sound logical. I prefer the morning, presumably because in the winter I am not home in time to prepare in the evening. I used to compound my own mash preparation, then tried the prepared foods, and when the chicks showed a marked preference for the latter, adopted it entirely. I always pour boiling water in my pail and put in the meal afterwards, finding it mixes better this way, and last of all add my cut clover, alfalfa meal or cut bone, twice a week adding some sale and seeing that it is well dissolved. I use cut bone and clover or alfalfa alternately except Sunday, which is a kind of evener-up, when the birds have to hustle. And if any surplus grain is left in the litter the over-supply is cleaned up. I never stall-feed them on mash, and when

the troughs are cleaned up grain is scattered in the scratching pen, where at present there is fully six inches of dry leaves. About 3 p. m. the folks throw in a little more grain and this, with a plentiful supply of fresh water, comprises their day's meal. Enough grain is fed them, however, to amply satisfy their wants, and cutting out the mash Sunday kind of evens up things and prevents an accumulation of grain. I use oats, corn, wheat and rye in about the order given; that is, oats is the main cereal and rye the least used. I also get blowings from the elevator; it is the cleanings from cars of grain. The biddies like to hunt the weed seeds in it and it gives them a variety. Occasionally I buy some millet, hemp, Kaffir corn, rice and hulled oats just for a treat. It is best to keep them on the hunt for grub, for a lazy hen is no egg producer. Grit and oyster shell is before them all the time and ground charcoal and sulphur is added to the soft stuff occasionally. Now by this simple way we are never without eggs and cannot see why others should be, if, as before impressed, you have the utility variety. I have a very original and simple coop and mate very closely, and have had some wonderful results in the buff color.

THE DANDY POULTRY NOVELTY CO., Danville, Ill.

MODEL POULTRY FARM

"The Pines" Has Every Equipment Known that is of Real Value to the Breeding of Fine Birds.

A Plant You Can Visit After Night as Well as by Day.

Friedman, Kieler & Co. and R. E. Jones, Known as Jones, "The Wyandotte Man, Doing Things at Paducah, Ky.

When we were asked to pay a visit to "The Pines," we expected to find a new plant, well equipped, but did not expect a plant so complete that improvements were almost impossible. When it comes to general lay of the land, perfectly constructed houses, conveniences for water, light and help, we doubt if there is one in the world its equal.

As for quality of stock, it goes without saying that every one knows who has been connected with the poultry business for the past twelve years what Jones, "the Wyandotte Man," has when fine quality is wanted. "The Pines" is owned by Friedman, Keiler & Co., the well known distillers of the famous "Brook Hill" whiskies, the whiskeys that "made Kentucky famous." Herr Friedman, Keiler & Co. and R. E. Jones known the world over as Jones "The Wyandotte Man," have opened up the poultry business in a way that does credit to the entire world.

Just a few minutes' drive from that beautiful and prosperous city of Paducah we find a most handsome country home set up on a gradual elevation where it is always dry, and ten minutes after a hard rain not a sign of a puddle of water to be found, we find the model poultry plant of modern times.

For the writer to tell all that is to be found there would take all this book, so we will not go into detail description of houses, but will give you a few of the most important improvements that took our eye. There are nine large buildings besides the office and many colony houses and every building is built the same as a dwelling house, weather boarded, paper lined and sealed with tongue and grooved sealing. These buildings are all especially designed for the purpose they are used and the illustrations will give you a better idea of what they are. I will call attention to the incubator house which is furnished with 14 modern machines, which gives them a capacity for 5,280 eggs at one time.

The brooder houses are complete in every particular, the large one is fitted with a tubular boiler hot water heater, which is the best brooder system to be found and has a capacity of 3,000 chicks. The other brooder house is fitted with up-to-date indoor brooders, 200 chick size, with capacity for 2,000 chicks.

The entire plant is lit with electric lights; every house from "The Pines" dwelling to the breeding houses have electric lights, even the barn and cow barn. You can turn a switch and light the entire plant or enter a house and there press the button and that particular house is lighted. The incubator house has a large light attached on a trolley which the operator can carry from one machine to the other and read the temperature, or by placing same in

the tester he tests the eggs.

One does not appreciate the value of this until he has it. Mr. Jones informs me that he does a great deal of his training of show birds after night. His large conditioning house has a light to every pen, here he handles his fine show birds and has them as gentle as lambs, poses them in all positions and he tells me that it is much easier to teach and gentle them by lamp light than by day light.

"The Pines" has its own water works which supplies water to all houses, where pipe lines have been laid and hydrants placed for this purpose, the dwellings and office have water piped in them, with bath connected. This water system consists of a large gasoline engine which pumps direct from a deep well into a stand pipe thus affording the strongest of pressure for all purposes, long lines of hose make the many beautiful flower beds always look fresh and full of bloom.

The birds we find at "The Pines" are of the usual high class that has always been prominent with Jones "The Wyandotte Man" that similarity of "The Strongest Blood lines on earth" is indeed very prominent in this noted flock and as Mr. Jones has always been in the habit of making one if not two big shows each season he informs us he will still continue along these lines and you may look out for him some place this winter. He has 200 fine birds consisting of Silver, Golden and White Wyandottes and to those looking for the best we will say try this old line bred strain.

Mr. Jones tells us he will breed 10 pens of each the coming season and to those desiring eggs he will be in shape to supply after January 1st.

In Collie dogs "The Pines" has some of the best blood in the world including a grand imported stud dog at the head of their kennels with a long list of fashionable bred matrons.

In conclusion I will say those desiring a handsome work of art, a book worthy a place in any library, which tells all about the grandest poultry plant in the country, gives full descriptions of all the different houses, and a book full of valuable information on breeding and mating Wyandottes, fully illustrated with handsome half tones, reproductions from life, of many of the noted winners of the world, birds with national reputations, send four cents in stamps, you will never regret it. This is just for the mailing. Send to R. E. Jones, R. F. D. No. 5, "The Pines," Paducah, Ky.

SELECTING THE LOCATION.

A Few of the Many Things to be Considered Before a Permanent Selection is Made.

In selecting a location for a small farm on which to make a comfortable living with poultry and the side lines one prefers to take up, there are a great many things to be considered, and while what I may write on the subject may not fit anyone's conditions in very many ways, some things which have resulted from my experience and study of the subject may be of interest to some who are considering the subject of a location on which to begin operations for themselves.

Of first importance, I would consider the ownership of the property. Better buy the land on time with a land contract and pay interest on the amount while having an owner's privileges, than paying rent and improving the property for someone else's benefit. Of course, it is always best to be able to pay down the full amount on the land, for there is always more or less risk in starting any enterprise on borrowed capital.

The amount of land desired will vary as widely as our different ideas do of the best way to make a living from poultry and our favorite side lines. Some men would be satisfied with five or six acres and succeed, while more would want ten or twenty acres, and not a few would prefer from forty to sixty acres. The quality of the land and the method to be followed will have a great deal to do with deciding as to the number of acres needed. If one is satisfied to buy the bulk of the grain and feed used on the place, ten acres would be sufficient land for the poultry work and its adjuncts. But if one wanted pasture and hay land for a horse and a cow or two and a chance to raise most of the grain and a wood lot to furnish fire wood, it would be necessary to buy forty acres or more, depending on the character of the soil.

I am well aware that most poultry writers recommend a rather light, sandy or gravelly soil as the most desirable for poultry, and while I do not question its advantages, I do not think such a soil is without serious disadvantages for anyone who contemplates gardening, fruit raising or farming of any kind in connection with poultry raising. If a light soil of this nature can be had, that is underlaid with a good clay subsoil within eighteen inches to two feet of the surface, its ability to produce paying crops will be very materially increased, but without a clay subsoil, sand or gravelly soil requires constant feeding to keep it up, and even then cannot be depended on to produce well except of such garden and field crops as can be thoroughly cultivated through the growing season. If one's intention is to produce practically all the food required for the stock kept on the farm, then a soil that is rich and capable of producing heavy crops should be selected. This, of course, will mean the selection of a heavier quality of soil, but if care is taken to select ground that is particularly well drained for the poultry yards and the poultry buildings, the poultry can be as favorably located on such a plant as they would be on a sandy or gravelly farm, and on the heavier soil they will have the advantage of a better grass range, especially in dry seasons

when the sandy location will furnish little if any green food during the drouthy part of the summer. I have observed that there is a very noticeable difference in the thrift and vigor of all plant life on heavy soil, to that of the same species grown on light or sandy soil, and I am not certain but the same difference in constitution of animals would be traced to the differences in the qualities of the soil. At any rate, I believe it is a mistake generally to recommend light or sandy soils as best adapted to poultry. Between a sandy and gravelly location I should prefer a soil of a gravelly nature, for as a general rule such soils seem to have more substance and life in them than do those of clear sand.

Where one contemplates fruit growing or gardening if only for family use, a rather high location has many advantages. If the farm is situated on land considerably higher than farms surrounding it, the place will be comparatively free from the destructive late and early frosts in the spring and fall, giving one a considerably longer season for the development and ripening of the more tender fruits and vegetables. In a location of this kind the advantages of air drainage and a better circulation of air add to the healthfulness of the place, a point of considerable importance to the poultry keeper as well as the poultry. Low situations in basin-like places, where the air sort of stagnates, as it were, are places to be avoided, whether for poultry raising or residence purposes. In fruit culture, destructive insect enemies will be found much more troublesome on these low sheltered locations than on the higher land, where the air is nearly always changing and it is seldom but what some little breeze is stirring. The importance of this matter of air drainage cannot be fully appreciated without a careful study of conditions, but an elevated piece of land has many advantages from almost any standpoint of consideration.

For the purpose of poultry raising a heavily timbered section should be avoided on account of the trouble the hawks will give one while the chicks are growing each summer. A rather well settled country is preferable for this reason, where there are not any very large tracts of timber in one piece. Sufficient trees should be near by to protect the buildings and stock from the penetrating cold winds of winter, but not in such quantity as to furnish breeding places for the hawks—one of the poultry keeper's hardest enemies to fight. This is another subject that only those who have been up against the real thing in actual experience can fully appreciate.

I should not care to be more than one or two miles from the shipping or selling point where the products of the farm were to be disposed of, but far enough out so I could allow all young growing stock free range without interfering with the rights of nearest neighbors. The distance will depend very much on the size of the town one locates near. The smaller the town the closer to it one can be, and still be among the farms where there is plenty of elbow room.

The matter of climate is not of as much importance as the selection of the most desirable places in any given section, where the poultry keeper chooses to start in. Illinois, Indiana and the adjacent states seem to have more poultry

try keepers than some others, but the keeping of poultry for both practical and fancy purposes is rapidly becoming a recognized profitable business in all well settled portions of this country. Every section has its own points of advantage and disadvantage to be made use of and overcome, but there are few places from the frozen north to the sunny south or from the Atlantic to the Pacific where poultry cannot be made to pay as well or better than any other branch of farm work. In warmer sections the saving in the expense of buildings is a greater consideration now than it was before the prices of lumber advanced, but no one section has all the advantages. If the poultryman himself be satisfied on the matter of climate, its consideration otherwise will be of minor importance.

I have not dwelt on the matter of a well drained soil, because it is generally recognized by all poultry keepers that damp or wet places are entirely unfit for poultry. If the advice given above in the selection of an elevated piece of land for the farm is followed, as a general rule the matter of the drainage of the soil will take care of itself.

The two things of most importance, I would say, are a well drained soil and one where there is ample chance for good air drainage onto adjoining land.

Where poultry keeping exclusively is to be taken up, the question of soils is not of as great importance, but in the majority of cases more or less farming and gardening operations are carried on in connection with the poultry.

The importance of thoroughly considering the location of a poultry farm cannot be easily overestimated, for when once settled and the improvements made, a change cannot be often made without very considerable sacrifice. It is seldom ever that a piece of property will sell for enough more after it has been improved to anywhere near cover the expense of the buildings put up.

Truly fortunate is he who has the advantage of being able to select a place just to his liking, but many of us because of limited capital or family obligations are compelled to choose the best available location that circumstances will permit. This is not always as much of a hindrance as at first thought it may seem, for most every section of country presents quite a variety of conditions, and it is rarely the case that one cannot, by a careful search, find very desirable locations within the circumscribed limits that their conditions dictate.

Where fruit growing is contemplated

on a very extensive scale, especially tree fruits, it will be an advantage to have a northern or northeastern slope for the orchard, to protect the trees from the too direct rays of the sun during the early spring when the thawing and freezing is most apt to injure the trees.

When running water can be had without too much rough, waste or wet land, it is very desirable, but the quality and amount of water available should be carefully considered before deciding finally on any location.

I do not expect I have touched on every consideration in the selection of a location for a small farm, but I have mentioned the points which have appealed strongest to me. Personally, I should prefer a farm with a variety of soils of medium quality—I should not care for any real heavy clay or light sand, and I would prefer part of the farm to be rather low land for meadow and field purposes and the rest higher land for buildings, orchards and poultry raising. Whether we ever find our ideal location in this world may be quite a question, but the careful consideration of what constitutes an ideal location may materially aid us in selecting a place with many of these features which are most to be desired and will contribute to our happiness and success in one of the most pleasant and profitable occupations that the country-loving person can go into.

VICTOR D. CANEDAY.

Taylor's Falls, Minn.

SOME "MUSTY" TALK.

You must have early chicks to win at the fall fairs.

You must have a warm place to set the early "setter."

You must gather the eggs often this cold weather or those early chicks will not materialize.

You must give the hens warm water.

You must "do things" as well as plan, study and think.

You must read the poultry papers at night. Attend to your poultry in the day time.

F. W. OWENS.

Richwood, Ohio.

TRAP NESTS.

A good trap nest tells no lies, but gives the poultry keeper or fancier a whole lot of information about his hens which is worth a great deal to him in selecting his breeders. I use the Ideal trap nests to keep the individual pedigrees of my breeders and their egg records, and find them splendid aids in producing better birds each year for both business and beauty.

VICTOR D. CANEDAY.

Taylor's Falls, Minn.

In Europe goose livers are highly prized, bringing as much as \$4 a dozen. Newman think there would be money in raising goose livers for the New York market.

Unlike the drake, the gander does not have a curled feather in the tail.

JOS. A. BURKHART,

Smithsburg, Md.

A ROMANCE IN POULTRY.

There is something about the chicken business that calls forth all the romantic instincts of the human race. A chicken crank, who has never kept chickens, will sit down and with a pencil and a sheet of paper, will figure out profits that will make a loan shark turn green with envy. But, unfortunately, the profits are purely on paper and always fail to materialize when put to practice. The habit of counting eggs and profits in chickens is so old that I should not care to take up valuable space in discussing it, except to remark that the late Phineas Barnum was right in asserting that the average American dearly loves a humbug.

But lately I came across an article in a periodical which has a large circulation among farmers in which the writer (the romancer I ought to call him perhaps) undertook to prove a fairy tale of profits which I think deserves attention. According to this romancer, who is a plain farmer, a certain poultryman of his acquaintance makes a fine living off poultry and never has to bother with the usual trials and tribulations of the average poultryman. This wonderful genius does not worry about hatching, about incubator brooders, about vermin or varmints, about diseases, about feed, about anything in fact. All he has to do is to rake in the shekels. This is how he does it. Says he (in *THE COUNTRY GENTLEMAN* of Nov. 24, 1904):

"his man is a professional exhibitor, and makes thousands of dollars every year at state, national and regular poultry shows. You may ask, does he raise or breed his own birds? No; not one-tenth of them. How does he do it? I believe I said once before that it is asserted that there are more varieties of Standard-bred poultry raised in Jefferson County than in any other county in the state. This man is well acquainted with all the breeders in this county and visits their flocks; and as each breeder has a different variety, he has no difficulty in purchasing, often at his own price, the choicest specimens in any of these small breeders' flocks; and as he is just as good a judge of a chicken as any judge (and a great deal better than most judges) he has no trouble in getting fowls that will score as high as any one. Another way he has is to purchase a sitting of eggs of some well-known and high scoring strain of fancy poultry, and then give these eggs to some farmer, or rather to some

farmer's wife, and let her raise the chickens for him at so much apiece; or let him have his pick of the lot and she to have the rest for her trouble. In this way he gets, at very small expense to him, a grand array of fowls of as many different breeds as he desires, coops them up, and from the time the first fair starts in September until the last poultry show closes in February, he exhibits chickens from one end of the country to another, and many times the bird which cost him \$2 he sells for ten times that amount to some fancier who has money to burn.

"His rule is, never to put a great deal of money into a chicken; then one cannot lose much. He has seen the case too often where a \$5 cock has won the prize over one which cost its owner ten times that amount. At the Wisconsin State Fair, this exhibitor won more money than any other four exhibitors, and it was a grand show of chickens, too, for that season of the year."

This is certainly interesting. There is nothing small about this fairy tale. Here we have it in black and white: "he makes thousands of dollars every year." How he does it is shown above. This poultry shark's balance sheet is not shown, but we have the bald statement that there is, say a couple of thousand dollars to the good shown every year. And so easy, too! How strange it is that we fellows who have been dubbing along year after year, raising our own birds, studying the Standard and keeping eyes and ears open to learn and improve, never happen to stumble on this get-rich-quick scheme!

But to an old-fashioned, old-fogy sort of mind like mine, there are one or two little conundrums in connection with this little game that need elucidation.

(A). How much actual cash gain is there in exhibiting poultry at a poultry show after you have paid for coops, for express, for entry fees and other incidental expenses—actual clean cash remaining? I may be wrong, but I always had an idea that a man was lucky if he came out even. I always thought breeders exhibited because of the pleasure it afforded them and because of the advertisement resulting therefrom.

(B). Can anybody furnish the address of those skillful breeders who sell exhibition birds for a mere song just before exhibition time? Where do those people live who sell a bird for \$2 that is worth ten times that sum? It is queer, but I

never happen to run across them, and I don't remember ever hearing of any fancier who ever did. I guess most of us would be willing to pay a handsome commission to any one who would put us next!

(C). How simple the eggs-for-hatching problem is, if you look at it the right way. The trouble with us fellows is we never have looked at it the right way. All you have to do is to get some eggs from a first class fancier (who probably has devoted years of time, labor and money to breeding up his flock), give them to a farmer's wife and call for your prize winners in the fall. In this connection there are several points to be observed: (1) Eggs from a strictly first class fancier—come cheap. They give them away in fact—glad to get rid of the pesky things! (2) The express companies carry eggs free and never jar or jolt them in passage. They are noted for this all over poultrydom. The papers are full of encomiums on these self-sacrificing, philanthropic express companies who are in business solely for their health and not to make money. In fact, they tumble over each other in their eagerness to settle claims for eggs damaged in transit. (3) Hatching and brooding chickens is such a simple matter that any farmer's wife can do it, and do it well. In fact the farmer's three-year-old kid could do it just as well. And there are no casualties ever happen to chickens on a farm. Horses never step on them, hawks shun them and they never drink from the barnyard pools. Every egg always hatches and becomes a prize winner in a hot show! So simple, so easy!

(D). There are numerous other conundrums that doubtless occur to any one who has ever had any practical experience in breeding exhibition fowls and exhibiting them, but I refrain. But before closing I cannot but wonder if the above described chicken shark ever sold chickens twice to the same man?

E. L. C. MORSE.

C. L. McFerren, Bellville, Ohio, has a change of ad this month. His White Plymouth Rocks are bred from prize winners and his S. C. B. Orpingtons are Cook stock direct. He has some choice stock for sale at very reasonable prices and guarantees satisfaction in every case. Look up his ad elsewhere in this issue and write him for prices and particulars.

\$135 FREE PRIZES \$135

First Prize, \$75 Shetland Pony. Second Prize, \$45 Pair of Poland-China Pigs. Third Prize, \$15 Pen of White Plymouth Rock Fowls.

These prizes will be given for the largest orders in cash received for poultry by Feb. 1, 1905. This is the greatest offer ever made by any poultryman. I have 2,000 head of pure bred fowls to sell, bred from my prize winners. Send for my catalogue which describes the prizes and prices on fowls. In order to give every one an equal chance living in different parts of the country, orders will be received and included in the contest that are postmarked Feb. 1, 1905.

FIRST PRIZE:—\$75.00 Shetland pony. Will be one year old next spring, beautiful bay color, sound in every respect, is a fine individual and a half brother to one I recently sold for \$75 cash and is good in every respect. The above pony will be crated and delivered to express company with shipping directions to send to the person who gives me the largest order or orders for poultry by Feb. 1, 1905.

SECOND PRIZE:—A pair of Poland-China pigs, valued at \$45, to the second largest order received from one person by Feb. 1, 1905.

THIRD PRIZE:—A pen of White Plymouth Rock fowls, cockerel and four pullets valued at \$15, to be given to the third largest order received from one person by Feb. 1, 1905. If party who gets this prize would prefer fowls of another variety, I will, if convenient, make a change. All the above offer and full information regarding my fancy poultry, Shetland ponies and Poland-China pigs is fully described in my new catalogue—the grandest and most complete catalogue ever issued in the world. One of the largest breeding establishments of poultry, ponies and hogs. Drawings and photographs of all the prize winning ponies, single drivers, match teams and four-in-hands of three State fairs and half-tone cuts of first prize and champion winners at World's Fair, St. Louis, 1904. It contains half-tone cuts of poultry houses, yards and bird's eye view of the whole establishment. It tells all about raising poultry, their diseases and cures and plans for building poultry houses, etc., with illustrations of poultry and prices of same; ninety pages and fifty illustrations. Fifteen years' experience as a breeder and exhibitor. This catalogue has been compiled at a great cost and will be mailed to any address upon receipt of 15c. Write to-day. It is worth many times the price asked. I have for sale 2,000 head of land and water fowls, 150 head of Toulouse and Embden Geese, 150 M. P. Ducks, also Rouen and Muscovy from my prize winning strain; 100 M. B. and W. H. Turkeys and over 1,500 land fowls. If you do not say that my catalogue is the finest you ever saw I will cheerfully refund your money.

GEO. A. HEYL, Washington, Illinois.

We Have Discovered The Secret

Sunflower Seed Will Make Hens Lay In Winter

It has been our good fortune to discover the secret. Nature, in her infinite wisdom, provided a plant, the seed of which will increase egg production and will assist poultry through the molting period. This plant is none other than the old-fashioned Sunflower that occupied such a cherished spot in our grandmother's garden. It is easily grown and will yield a good crop anywhere. The

American Giant Sunflower

which we have grown for years and have perfected to a high degree, with proper cultivation produces mammoth heads measuring from 2½ to 4 feet in circumference, weighing from 5 to 10 pounds each, and grows 3,300 strong, healthy plants to the acre.

Sunflower Seed is a natural feed for fowls—takes the place of "dope" mixtures. When properly fed brings birds through the molting season in one-half the usual time, with better plumage and better health than by feeding linseed meal, cottonseed meal, or any of the numerous "doctored" preparations offered for this purpose. It is nature's provision, works in nature's way, and produces natural results.

Last year we supplied seed to poultry raisers in every state in the Union and many in Canada. Results were so satisfactory the indications now are that we will have to hustle to fill orders for next season. However, we had a splendid crop and delight in hustling, so send in your orders early and be ready to plant an acre or more. Give it a thorough test, it will greatly increase your poultry profits.

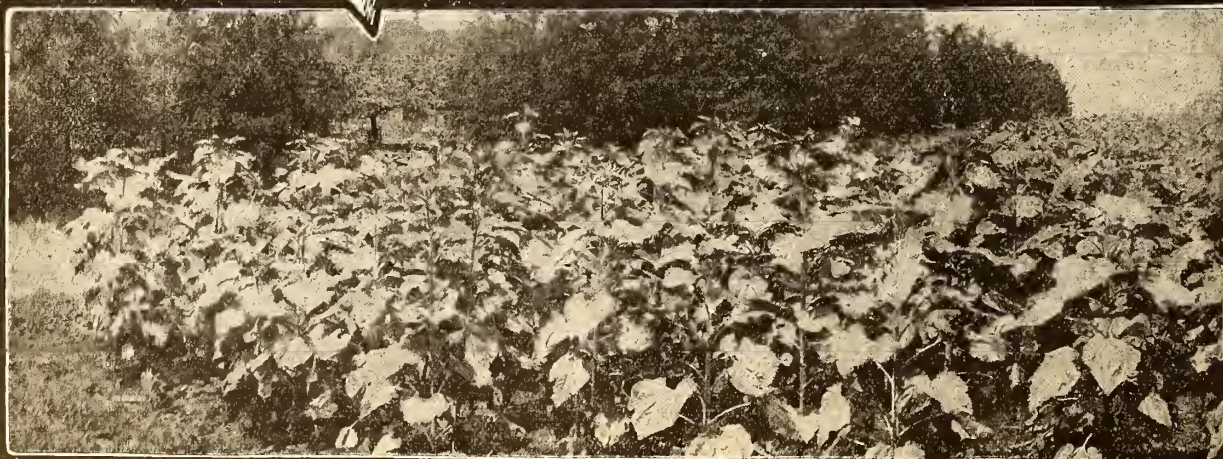

**We Send Enough to Plant an Acre, Express
Paid, For 50 Cents**

and send directions how to plant, grow and harvest, with each order. No order filled for less than 50 cents. Address all orders to

THE FUNNY SIDE OF POULTRY LITERATURE.

BY REV. C. E. PETERSEN.

Even a poultryman gets tired, every now and again, of information, and perhaps feels inclined to be thankful, when every now and again something with a laugh to it appears.

It is for this purpose that the present article has been written. For years we have gathered from all sources anything we came across on the subject in hand, and hereby present a part of it to the many readers of the AMERICAN POULTRY JOURNAL, who may in an idle moment, during a long winter evening, read and feel as pleased as we did, when here and there in our varied reading, we came across these little bits of amusing verse and anecdote.

THE GOOSE A NATIONAL BIRD.

The following, from *Bench and Bar*, took place when Judge Thacher was a member of the House of Representatives of the United States. A bill was reported on the subject of American coins, which made provision that one side of them should bear the impression of an eagle. Mr. Thacher moved that the word eagle should be struck out wherever it occurred and the word *goose* substituted. He rose to support the amendment, and with great gravity stated that the eagle was an emblem of royalty, and had always been so considered. "It is a royal bird Mr. Speaker, and the idea that it should be impressed upon our coinage is inexpressibly shocking to my republican feelings. Sir, it would be grossly inconsistent with our national character. But the goose, sir, is a republican bird—the fit emblem of republicanism. Ever since I became acquainted with classic lore, sir, I have remembered with ever new satisfaction, that it was the cackling of a flock of these republicans which saved the greatest city in the world, and always since I have felt disposed to greet every goose I have seen as a brother republican. These reasons, sir, upon which I could enlarge very much, are, in my view, conclusive in favor of the amendment proposed, and I hope our dollars will bear the impression of a goose, and that goslings may be put on the ten-cent pieces." When the amendment was proposed, every countenance was relaxed into a smile. As Mr. Thacher proceeded to state his reasons, there was a universal peal of laughter loud and long. Unhappily, the member who reported the bill—and who must certainly have been a goose himself—thought that all the laugh was at him. The next day he sent a friend to Mr. Thacher with a challenge.

When the message was delivered, and the reason told, Mr. Thacher replied: "Tell him I won't fight."

"But, Mr. Thacher, what will the world say? They may call you a coward."

"A coward," said Mr. Thacher, "why, so I am, as the world goes, and he knows that very well, or he would never had challenged me. Tell him I have a wife and children who have a deep interest in my life, and I can not put it to such danger without their consent. I will write them; and if they give their permission I will accept his challenge. But no," he added, "you need not say that. Tell him to mark

Great Sacrifice Sale

Of Thoroughbred Young Stock

2000 Grandly bred youngsters from prize winning ancestors will be sold far below their real value. They represent the most fashionable and up-to-date breeding strains and will surely prove a rich investment to the purchasers at the ridiculously low prices for which they are offered. There is scarcely a bird in the entire lot that is not actually worth from two to four times the price for which I am selling them.

I must sell them and will do so regardless of their rightful values.

MUST BE SOLD THIS MONTH, So don't loose this splendid opportunity of securing these genuine bargains

ORDER TO-DAY

To-morrow may be too late

NOW IS THE TIME

They won't last long

Read this great bargain offer

600 WHITE PLYMOUTH ROCKS

All royally bred and many of them will develop into prize winners in the hottest kind of competition. **READ MY GUARANTEE**

500 BARRED PLYMOUTH ROCKS

Individually fine—breeding extra fine. The kind no breeder need be ashamed to have in his yards. If you don't want them after carefully examining them—well **Read My Guarantee.**

500 WHITE WYANDOTTES

Bred in the purple—"like begets like"—heavy layers. Snow white and stay white beauties. Fit for any company, and **Backed Up With My Iron-Clad, Never-Broken Guarantee.**

400 SINGLE COMB WHITE LEGHORNS

The bred-to-lay-and-win kind. An extra choice lot for the money and the biggest kind of bargains. You can't make any mistake in buying these birds at twice the price. **Don't Forget My Guarantee.**

Sacrifice Prices

You can have your choice of any variety mentioned above at the following prices: No restrictions as to amount or kind. I will sell the whole 2000 birds to one man if his order is received first. First come, first served. **They all go—nothing held in reserve.**

Cockerels, each - - - \$3.00

Perfect satisfaction guaranteed in every particular or money and express charges will be cheerfully returned and no questions asked

The first orders received will get first pick—but this stock is all good and worth double the money. Send money with order. No orders sent C. O. D. **Read my guarantee. Its as good as gold.**

CONGRESS PARK POULTRY YARDS

Clarence Ward, Prop. Box 123 CONGRESS PARK, ILL.

Eg-get

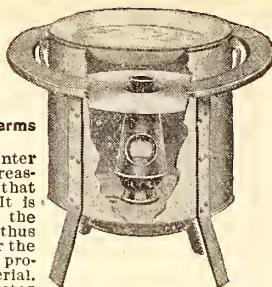

Poultry Fountain

For Winter Use—Prevents Freezing and Warms Drinking Water.

Cracked ice or ice water is not good for winter egg production. A plentiful supply of reasonably warm water is the best stimulant that can be provided for winter egg laying. It is better than prepared foods. It makes the ordinary grain feed worth twice as much, thus furnishing the necessary nourishment for the body and a surplus to provide the egg producing organs with the necessary material. Eggs contain a very large amount of water.

and fowls will not drink enough of ice water to supply what is necessary. Write for circulars and price or ask your dealer to order.

IOWA INCUBATOR CO., Box 102, Des Moines, Iowa.

600 "Ringlet" B. P. Rocks

BEST IN THE WORLD

100 Show Birds fit to win in hottest company; and you talk about breeders—we have 500 that we can truthfully say that they positively have the color, shape, size, legs and combs. Our prices are right, and to prove it we ship on approval. Please write your wants plainly. **EGGS after March 1st.**

KING BROS., Lock Box 174, Oshkosh, Wis.

Only Four Hours' Ride From Chicago.

Accompanying photo from life. One of our prize winners at Wisconsin State Show, January, 1904. Weight, 11 lbs.

What Does the Dealer Say?

Does he say, "I sell you fence at factory prices?" No! He pays factory prices himself, consequently has to add a profit in order to make any money.

Does he say, "take the fence and use it for 30 days and then bring it back if you are not perfectly satisfied?" No! He could not do this if he wanted to.

The factory has sold him the fence and they must have their money. He has to sell the fence for cash or negotiable notes in order to pay the factory.

Does he say, "I have 26 styles of fence to choose from?" Not much! He usually has only two or three styles. He cannot afford to carry any more styles in stock. In order to carry a stock of 26 styles it would require a vast amount of capital, much more capital than one dealer out of one hundred has.

The Mail Order Fence Factory---The Advance Fence Company

says "yes" to all of the above questions, for it is our method of doing business. We sell you Advance fence at factory prices—the prices the dealer has to pay.

We make you individually a wholesale buyer. We go further—we sell you fence on 30 days' free trial. This free trial method is the fairest selling proposition ever made by any fence factory.

By this method you can take the fence you order, set it up and be satisfied, or send it back at our expense and we will refund your money. We pay all freight on the fence. You know exactly what your fence will cost you delivered at your depot.

We make 26 styles of Advance Fence which we sell by mail—a style, height and weight of fence for every purpose. You can get just the very fence you want from us—nothing that does after a fashion—but just the thing.

You get a better guarantee from us than from anybody else. We guarantee every rod of fence we sell, and as our advertising is done only in reliable publications—papers that guarantee their subscribers against loss by dealing with people who advertise in their columns, it makes two guarantees in one.

You cannot risk a cent in buying direct from a factory that is as well known as ours.

Advance Fence has double strength top and bottom strands and is made with a continuous stay wire which is wrapped twice around each line wire as it passes across the fence and is twisted with the salvage from one stay to the next thus leaving no loose ends. There is a slight crimp in the line wire where the stay is wrapped around it. This provides for expansion and contraction and makes it impossible for the stay wires in the Advance Fence to slip, slide or bunch as will stay wires cut at top and bottom of the ordinary woven wire fence.

There are many important things to know about Advance Fence—its construction, its price, our method of manufacturing and selling—too many things to put into an advertisement; but these things are all told in our free fence book, which is mailed upon request. You should send for this book at once. It will start you on the road of becoming a wholesale or factory buyer.

ADVANCE FENCE CO., "The Mail Order Fence Factory," 1347 Old St., Peoria, Ill.

out a figure of my size on some wall, and then go off to the honorable distance and fire at it; if he hits within the mark, I will acknowledge that he would have hit me had I been there."

The gentleman laughed, returned to the challenger, and advised him to let Mr. Thacher alone, for he believed that if they should fight, and Thacher were killed, he would in some way contrive to get the laugh upon his opponent that he would never get over. The point of honor was abandoned, and thus ended what might have, with another man than Mr. Thacher, for the opponent, been a more serious affair.

THE HEN.

Was once a hen of wit not small
(In fact, 't was not amazing),
And apt at laying eggs withal,
Who, when she'd done, would scream and bawl,

As if the house were blazing.
A turkey-cock, of age mature,
Felt thereat indignation;
"T was quite improper, he was sure,
He would no more the thing endure;
So, after cogitation,
He to the lady straight repaired,
And thus his business he declared:
"Madam, pray what's the matter,
That always, when you've laid an egg
You make so great a clatter?
I wish you'd do the thing in quiet;
Do be advised by me and try it."
"Advised by you?" the lady cried,
And tossed her head with proper pride,
"And what do you know, now I pray,
Of the fashions of the present day,
You creature ignorant and low?
However, if you want to know
This is the reason why I do it:
I lay my egg, and then review it."

—MATT. CLAUDIUS.

DRIVING A HEN.

When a woman has a hen to drive into the coop, she takes hold of her hoops with both hands, and shakes them quietly toward the delinquent, and says, "Shew there." The hen takes one look at the object, to convince herself that it's a woman, and then stalks majestically into the coop, in perfect disgust with her own sex.

A man don't do it that way. He goes out of doors and says, "It is singular nobody in this house can drive a hen but myself." And, picking up a stick of wood, hurls it at the offending biped, and observes, "get out there you thief." The hen immediately loses her reason and dashes to the opposite end of the yard. The man straightway dashes after her. She comes back again with her head down, her wings out, and followed by an assortment of stovewood, fruit-cans, and coalclinkers, with a much puffing and very mad man in the rear. Then she skims up on the stoop, and under the barn, and over a fence or two, and around the house, and back again to the coop, all the while talking as only an excited hen can talk, and all the while followed by things convenient for handling, and by a man whose coat is on the sawbuck, and whose hat is on the ground, and whose perspiration and profanity appear to have no limit. By this time the other hens have come out to take a hand in the debate and help dodge the missiles—and then the man says every hen on the place shall be sold in the morning, and puts on his things and goes down the street, and the woman dons her hoops, and has every one of those hens housed and contented in two minutes, and the only sound heard on the premises is the hammering by the eldest boy as he mends his broken pickets.

THE SHANGHAIS.

The shanghi reuster is a gentile, and ginrally speaks in a forun tung. He is built on piles like our Sandy Hill

erane. If he had bin bilt on legs he wud resembul the Peruvian lama. He is not a game animal, but quite often comes off sekond best in a ruff and tumble fite; like the Injins that kant stand civilization, and are fast disappearing. Tha roost on the ground similar to the mud-turtle. Tha often go to sleep standing, and sumtimes pitch over, and when they dew they enter the ground like a pickaxe. Their feed consists uv corn in the ear. Tha crow like a jackass troubled with the bronkee-sucks. Tha will eat as much tu onst az a district skule master, and generally sit down rite oph, tew keep from tipping over. Tha are dreadful unhandy to cook; you have to bile one end of them to a time, you kan't git them awl into a potash kittle tu onst. The female reuster lays an egg as big as a kokee-out, and is sick for a week afterward, and when she hatches out a litter of young shanghis, she has to brood over them standing, and then cant cover but three uv them. The rest stand around on the outside like boys around a circus tent, gitting a peep under the kanvas whenever they can. The man who first brought the breed into this country ought to own them all and be obliged tew feed them on grasshoppers caught bi hand. I never owned but one, and he got choked to death by a kink in a clothes line, but not till he had swallowed eighteen feet ov it. Not any shanghi for me, if you please; I would rather board a traveling colporter, and az for eating one, give me a biled owl rare done, or a turkee buzzard roasted hole, and stuffed with a pair of injun rubber boots, but not enny shanghi for me, a shanghi.

JOSH BILLINGS.

THE EGGS.

Beyond the sunny Philippines
An island lies, whose name I do not know;
But that's of little consequence, if so
You understand that there they had no
hens;
Till, by a happy chance, a traveler,
After a while, carried some poultry there.
Fast they increased as any one could wish,
Until fresh eggs became the common dish.
But all the natives ate them boiled—they
say—
Because the stranger taught no other way.
At last the experiment by one was tried—
Sagacious man—of having his eggs fried.
And, oh, what a boundless honor for his
pains,
His fruitful and inventive fancy gains;
Another, now, to have them baked devised—
Most happy thought—and still another,
spiced
Who ever thought eggs were so delicate?
Next, some one gave his friends an omelette.
"Ah," all exclaimed, "what an ingenious
feat?"
But scarce a year went by, an artiste
shouts,
"I have it now; ye're all a pack of louts;
With nice tomatoes all my eggs are stewed."
And the whole island thought the mode so
good
That they would have cooked them to this
day,
But that a stranger wandered out that
way.
Another dish the gaping natives taught
And showed them eggs cooked *a la Huguenot*.
Successive cooks thus proved their skill
diverse;
But how shall I be able to rehearse
All of the new delicious condiments
That luxury, from time to time, invents?
Soft, hard and dropped, and now with
sugar sweet,
And now boiled up with milk the eggs they
eat;
In sherbet, in preserves; at last they tickle
Their palates fanciful with eggs in pickle.
All had their day—the last was still the
best.
But a grave senior thus one day addressed
The epicures: "Boast, ninnies, if you will,
These countless prodigies of gastric skill—
But blessings on the man who brought the
hens."
Beyond the sunny Philippines

Our crowd of modern authors need not go
Newfangled modes of cooking eggs to show.
—Translated from the Spanish.
And here we will bring to a conclusion

these random selections, with a promise
that we will come again, some future
time.

Pure Northnp Strain, bred for heavy layers. At the recent Chicago December Show won 1st cock, 1st, 2d cock-
erel, 1st, 2d, 3d hen: 1st, 2d, 3d, 4th pullet; 1st pen. Pens score 155 65-100. Large, vigorous cockerels for sale.
splendid for breeders or show birds. Eggs in season, \$2 per 15. Address,
A. B. KAYE, State Vice-President Black Minorca Club, Kaye's Park, Walworth, Wis.

EXHIBITION S. AND W. WYANDOTTES

winners at Chicago, Indianapolis, Pittsburg, Cleveland
and Columbus. Line bred for nine years. Young and
old stock, fit to win in any company, now for sale. Fine
breeders, \$2 up. Also S. C. W. Leghorns (Van Dreser
Strain), and W. P. Rocks (Fishel Strain). Satisfaction
guaranteed or no sale. Write to-day.

WEST VIEW POULTRY FARM

W. C. Brookover, Box 21, Carlwlick, O.

BUFF WYANDOTTES

The best general purpose fowl and one that is extremely profitable to the fancier. The
Royal Strain is unexcelled as egg producers and the best for all other purposes. Seven out
of ten firsts at two shows attended last season—including four at Chicago. Indian Runner
Ducks—the money makers.

W. R. WOODEN, Battle Creek, Mich.

BAIR'S BARRED ROCKS

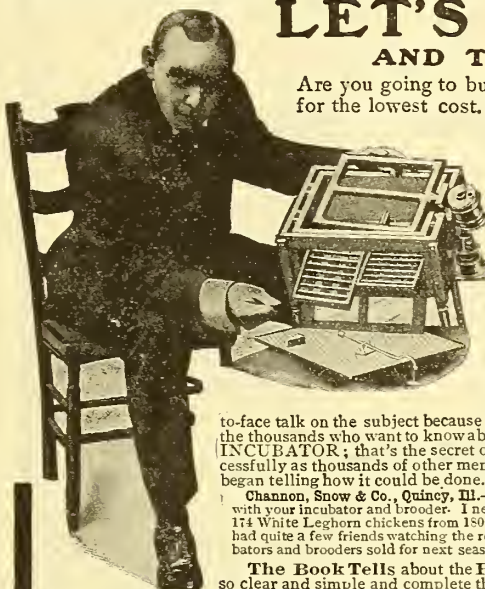

are daily proving their claim of being LEADERS FOR EXHIBITION AND
UTILITY. Since 1901 they have won in my own and customers' hands 316 regular
premiums. In my hands they won on every bird entered at Pan American Ex-
position, Missouri and Kansas State Shows and at the big Kansas City Shows,
and finally in the great World's Fair Show. In Missouri's awards I won on every bird
entered, winning 9 regular premiums, 1st and 2d cock, 3d and 4th hen, 4th and 5th cockerel,
4th and 5th pullet and 2d pen. In my yards the 200-egg hen is a reality. Lady Pan, the great-
est living hen, has a record of 247 eggs for year 1903 and 11 blue ribbons won in the largest
shows of the country. I have for sale fine cockerels from Lady Pan pullet line, and extra
fine cockerel breeding pullets. In exhibition birds I can fit you for any show. Let me
know your wants.

L. O. BAIR, 2721 Cherry St., Kansas City, Mo.

LET'S SIT DOWN
AND TALK IT OVER

Are you going to buy an Incubator? You want the best
for the lowest cost. I want you to know about our

New Idea Incuba-
tors and Brooders

If I could sit down with you, take one of
our machines apart and show it to you,
piece by piece, I would have no trouble in
interesting you. No machine on the mar-
ket deserves your confidence more than the
New Idea. THEN when I told you
that you could get it for less than ONE-
HALF THE COST of other machines
and showed you just how this saving is
made I would be sure of your order.

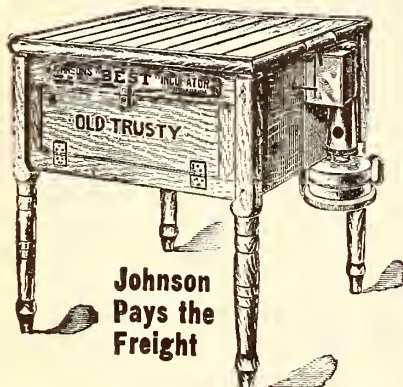

This is the spirit in which we have
written Our New Book, "How to
Make and Save Money with In-
cubators and Brooders." It is a face-
to-face talk on the subject because we cannot in any other way meet and talk to
the thousands who want to know about the New Idea. BUILD YOUR OWN
INCUBATOR; that's the secret of saving half, and you can do it just as suc-
cessfully as thousands of other men, boys and women have done since we first
began telling how it could be done. Read what this man says:
"Channon, Snow & Co., Quincy, Ill.—Dear Sirs: I told you I would report my success
with your incubator and brooder. I never thought they could be built so cheap. I have
174 White Leghorn chickens from 150 fertile eggs and they are all doing well. I have
had quite a few friends watching the results of your machine, and I have now five incu-
bators and brooders sold for next season. F. GEO. FARLINGER, Detroit, Mich.

The Book Tells about the Plans for Building Incubators and Brooders
so clear and simple and complete that you can't possibly go astray. Besides we
furnish you the parts you cannot make like Tank, Heater, Lamp, Regulator, etc.
and we guarantee that no factory-made Machines have better fixtures than yours. Everything we fur-
nish is of the very best. You need a brooder too. Our method enables you to get an Incubator
and Brooder at less cost than a factory-made Incubator alone. Other features of interest in
the book: "Why factory-made Incubators are Expensive," "How to Get Your Incubators Free,"
"Give the Boy a Chance," "Full Instructions for running Incubators and Brooders," etc. It's full of facts helpful to
the experienced and invaluable to the beginner. Get the Book! Write for a copy today and begin planning carefully.
Start right! Saving on the cost of your Incubator and Brooder is the best kind of money-making. A postal will bring
the Book. It's free. Contains more genuinely New Ideas than any Incubator catalogue of the year.

CHANNON, SNOW & CO., Dept. C, QUINCY, ILLINOIS.

Old Trusty Incubator.

The new machine by an old hand. Made by Johnson, the Incubator Man. Only a year old, and it didn't have to be improved for 1905. Johnson made it right to begin with.

**Johnson
Pays the
Freight**

You Can't Know Too Much About Johnson's Pay-for- itself Hatcher.

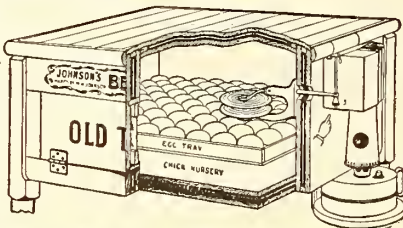

The more you know about it the better you like it. Johnson wants you to know all about it. **Take a square look at the cuts and read:**

Made of select California redwood and 12-oz. cold-rolled copper. Miller Safety Lamp, Taylor Bros.' guaranteed incubator thermometer, double doors, sides, bottom and top. There could be no better material or construction.

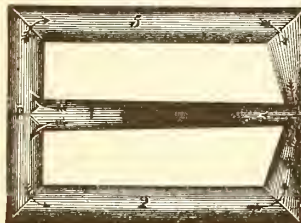

Forty Days Free Trial

And Johnson Guarantees Every Machine 5 Years.

This cut shows the workings. Johnson's system is planned for results and convenience. Note positions. All parts below the level of the lid, leaving the lid for a table. Automatic regulator comes already attached and connected, a single adjusting nut on the outside of the machine. The double wafers well out over the eggs and down close to them. Regulator counter-balanced within itself.

Copper Pipe Heating System

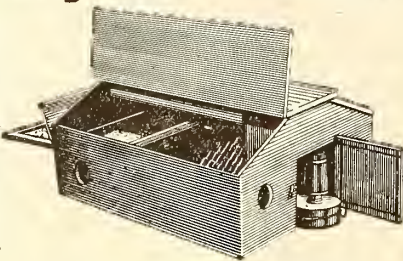

Patented
Oct. 20, '03
and
Feb. 16, '04

he hot water discharged to opposite end of the egg chamber, divided and returns back to boiler, No. 7. Pipes 2 and 5 and 1 at point No. 4 equal in radiation to pipes 2 and 5 at any point. Boiler No. 7 fitted with patent return hood, saves half the kerosene and draughts of air do not affect the lamp.

The Old Trusty Brooder

Made of best California redwood, never shrinks, swells or pulls apart at joints. Miller Safety Lamp in solid iron lamp box, no gas can enter chick chamber. Inclined floor prevents chicks from piling up. Enough heat under floor to take chill off. Note the hover cloth frame, partly withdrawn. Chicks hover under cloth warmed from above. Chick backs are warmed and sleepy nerves soothed the natural way. Chicks don't pile up, chill or become overheated.

Nearly 13,000 Old Trusties

Incubators and Brooders, used the first season. That's the record for a new machine. The only machine that ever got into the first rank the first year. They went out on Johnson's long trial plan and with Johnson's guarantee. They went at a reasonable price, too, for you know

JOHNSON PUT INCUBATOR PRICES DOWN.

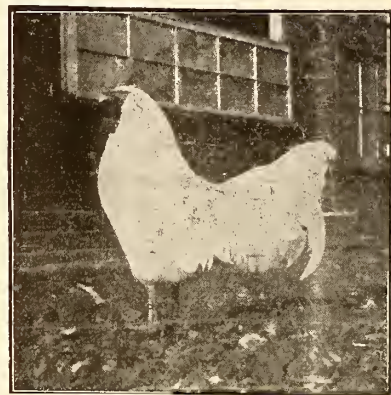

None came back for no better machines can be made at any price. Johnson has made 80,000 Incubators and Brooders. He put all his experience into his new **Old Trusty**—the only machine he has anything to do with now. Get his new catalog and Advice Book. Over 100 pages, 300 reproduced photographs, records, house and yard plans, etc. Mailed **FREE**.

M. M. Johnson Company, Clay Center, Neb.

HOW MUCH CAPITAL REQUIRED TO MAKE A LIVING IN THE POULTRY BUSINESS?

This question is usually asked by people who have a few hundred dollars and want to invest it so they can make a living from the start. Now for a person without experience to invest all they have in the poultry business is not a very safe plan. The better way is to start with a few hens, which can be kept on a city lot, get the best stock or eggs you can afford to buy; get an incubator and a brooder or two. Don't buy the cheapest, but the best. If you don't have room to raise all the chicks sell them right out of the incubator or brooder. Give your small poultry plant all the time and study possible. The object for a beginner is to get experience and in this way they can continue with their present occupation and make a start in the poultry business.

There is no branch of farming more profitable than egg farming. The crop can be gathered every day in the year and are the most salable product possible to produce. When I commenced selling eggs here first I fed the fowls so

S. C. WHITE LEGHORN MALE.
Owned and bred by Jno. C. Plane, Belvidere, Ill.

they would produce rich, fine flavored eggs and every egg was fresh and clean. Then I sold to wealthy people that wanted the best and was willing to pay for the same. They were so well pleased they told their friends and soon the demand was greater than the supply. Broilers and roasters are sold to the same people. Every year I add more buildings and stock but cannot supply the demand.

To be successful get good stock or eggs and good warm dry buildings.

Have the north side not over five feet high and all outside walls as near air tight as possible with windows and curtain rightly arranged. With liberal feeding a good supply of eggs can be had in the coldest winter weather. The feeding question is a puzzle for the amateur. He tries everyone's system, then don't know just which is the best. This is the one that gives me best results: First in the morning, warm water, then for each pen of 15 Leghorn hens or pullets one quart of mixed grain, this is equal parts, by measure of wheat, corn and oats, this is warm (not hot, just warm). The floors of the pens are covered with two inches of dry sand, over this 6 inches of straw and marsh hay, the grain is scattered in this litter. There is a general rush for the corn. When the corn is gone the other

grains are well mixed in the litter so they are busy for some time. At noon, one pint of this mixed grain is fed in the same way. After the noon hour we scald eight quarts of fine cut clover hay, cover and let it remain on the stove: one hour before dark mix this scalded clover with eight quarts bran, eight quarts middlings, eight quarts No. 1 feed, that is corn and oats, equal parts by weight ground together, two quarts oil meal, handful salt. The dry parts are all thoroughly mixed in the mash trough with a garden hoe then the clover is mixed in and just enough hot water used to make it wet. We feed all the birds will eat of this mash. Then we go through the pens with some warm corn and give them all they will eat. The evening feed should be a full one. The winter nights are long and the birds are on the perch, without exercise. I keep beef scrap, bran, oyster shell and grit in feed boxes at all times. This is the third winter with this system of feeding and am well pleased with the results. Remember that clover and meat are absolutely necessary for winter egg production. Also that the poultry business is easy to learn with the excellent journals and books. Invest a few dollars in up-to-date literature, a few hens or eggs for hatching and after one year's experience you will know how much to invest and how to invest it.

Marinette, Wis. W. C. COFFMAN.

CARE OF STOCK FOR FERTILE EGGS.

Now is the time to select your breeders for 1905. Choose type and shape first above all. Pick those well developed and showing vigor. Select the females, if possible put them in pens, as they will be used in mating and breeding. Do not allow Hens and Pullets to run together. Hens will get fat and a fat Hen isn't desirable now. See that they have plenty of fresh air, clean quarters. Keep them working in clean litter, give mash in morning, scatter little grain in litter; wheat is best. Let them out on the ground when weather permits, but not when it is storming, cold and damp. Fowls must have exercise, fresh air, pure water when confined in cold weather or you will have trouble getting early chicks. The male should have the same care as to feed, etc. Mate them at least three weeks before you want to commence hatching. Wheat, oats, barley make good grain ration. Corn should be used sparingly. Cooked vegetables are good for the mash. Peas are also good cooked, added to mash. They must have grit and green food. Do not crowd them at any time.

Cleveland, Ohio. M. E. WURTS.

I have cockerels this season, hatched last of March and early in April, that weighed 8 to 10 pounds in November. Also pullets, same age, weighing 6½ to 7 pounds. Think their quick growth, large frames, etc., caused chiefly by allowing them free access to food at all times after they were weaned from brooders and placed in roosting coops, in edge of corn field. I fed cooked mash at night and kept Chick Feed and wheat in boxes for them to eat during the day, substituting cracked corn for Chick Feed as they grew older.

BRISTOL, CONN.

The Great Question

for the next few months will be, "What Incubator shall I buy?" If we could talk with you face to face and explain the many advantages of the

Perfected Von Culin

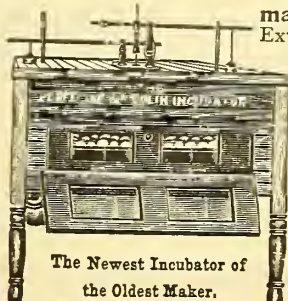

the question would be answered most satisfactorily to us both. This machine is the result of practical experiments and tests extending over a period of 30 years. The inventor Mr. C. Von Culin is widely known as a pioneer in incubation. He built his first machine in 1873 and has been continuously in the manufacture of incubators and brooders ever since 1885.

The result is the most perfect and simplest machine on the market. Kiln-dried Lumber, Extra Thick and Packed Double Walls, Full

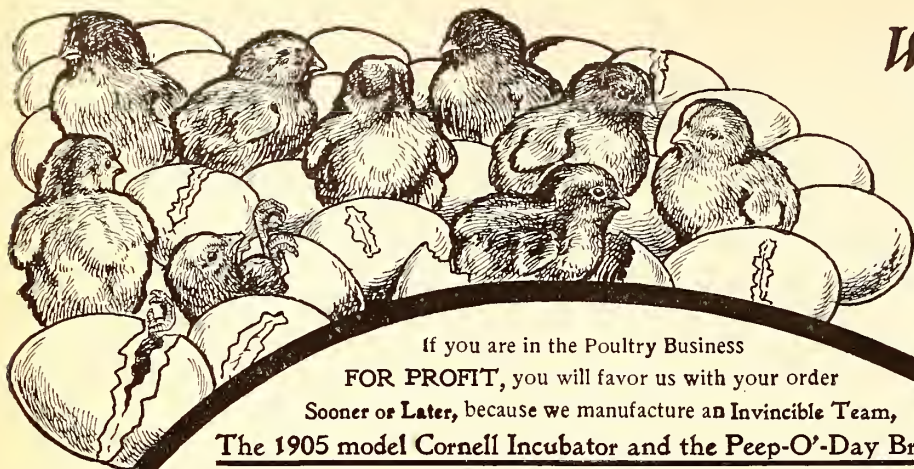

Sized Heaters, Metal Safety Lamp, Improved Thermostat absolutely controls heat, Tested Thermometers, and a first class Egg Tester. It takes only about ¼ as much oil to run this machine and your hatches will run about 20 per cent higher. A big saving every year. You won't quarrel with the price.

Our "Boiled Down" Catalogue tells you what you want to know, simply and in the fewest possible words. It is a time saver. We send it free. Write to-day.

Sooner or Later, because we manufacture an Invincible Team,

The 1905 model Cornell Incubator and the Peep-O'-Day Brooder

We offer, with a Happy New Year to you, the following notable improvements in our 1905 model Cornell Incubator :

Controllable Moisture Device (Patent applied for) : Supplies the indispensable moisture and avoids "Dead Chicks in the Shell," that curse of "Non Moisture" machines.

Quadruple Action Thermostat (Patent applied for) : Sensitive as a thermometer and responds as sharply to the Heat variations.

Automatic Ventilation (Patented) Supplemented by Our Safety Valve : Makes our system positive, dependable and precludes the possibility of deadly Carbon Dioxide banking in the egg chamber.

Uniform Heating System : Pours pure, moist, warm air into the machine and insures absolutely uniform temperature at all levels of the egg chamber.

Galvanized Iron Heater : Stayed interiorly with iron castings and outwardly protected by a solid cast iron crown.

Removable Nursery Trays and Egg Chamber Top : For the purpose of airing, washing, sunning and cleaning.

Table Top (Patented) : Of solid one-inch chestnut, protects the Regulator Arm from all outside interference.

Felted Compound Door (Patented) : Prevents the heat from sifting through.

Piano Fitting Legs : Adjustable without tools or trouble.

New Peep-O'-Day Outdoor Brooder and Colony House Combined.

Is a useful addition to our Now complete list of Peep-O'-Day Brooders, Coops and Portable Poultry Houses. They have given uniform satisfaction during the past 14 years, and have well earned the name of "Chick Life Preservers."

Our Food Mill is grinding Night and Day. Our Chick Food, Scratching Food and Mash are the best that skilled labor and sound grain can produce. **Our Clover and Alfalfa Products** are of the New Crop and of the highest quality.

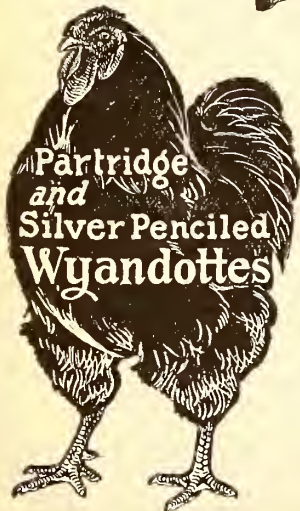

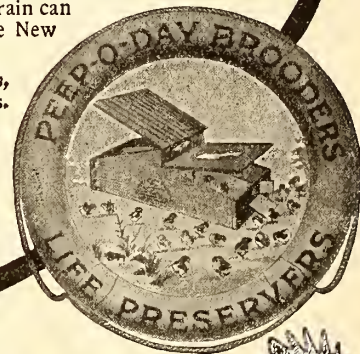

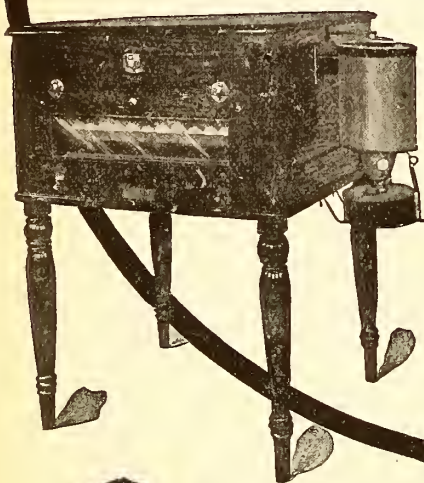

We make **Lice Paint, Lice Powder, Disinfectants, Roup Cure, Poultry Remedies, Appliances and Supplies.**

WE MANUFACTURE THE BEST OF EVERYTHING THE
POULTRYMAN REQUIRES.

The cures being made by this magic lotion every day are truly remarkable. Mrs. B. A. Hubbard, Plum Point, Tenn., tells of her cure in a month with this lotion after all doctors and remedies had failed for five years to cure her. To-day she can see perfectly out of both eyes. Rev. M. H. Blackman, the well known pastor of Ovid, Pa., was cured of a

Bad Case of Granulated Lids Cured By Prof.
H. T. Schlegel's Magic Eye Lotion.

case of granulated eye lids that had resisted for years all attempts of doctors to cure. Mr. Geo. W. Byers, Owensboro, Ky., was cured of ulcers and wild hairs with this lotion after all other remedies had failed. Dora Casey, Chicago, was cured of granulated lids, for which doctors treated her for five months steady, but failed to cure. Dr. J. W. Angell, of Iowa, one of the oldest and best-known doctors in the west, suffered with granulated lids for seven years. He tried every remedy, but failed to cure until he used Prof. Schlegel's eye lotion and one bottle gave him more relief than all the remedies he ever tried. Dr. J. O. Gabler, of Peoria, Ill., suffered from childhood with granulated lids and was cured in a month with this famous lotion. G. Klopfer, the well-known florist of Peoria, Ill., suffered for years with weak, watery and sore eyes and spent hundreds of dollars with doctors. One bottle of Prof. Schlegel's Magic Eye Lotion cured him. It stops pain instantly. It contains no Cocaine nor other harmful drugs, and it cures every case of sore or weak eyes, and cures to stay cured. The Professor is very glad to send a free package of his remedy to any one who suffers with their eyes. Write to-day to Prof. H. T. Schlegel, 670 Mackinaw Bldg., Chicago, Ill., and be cured.

Shows, Associations and Clubs

Secretaries are requested to send us the latest news and
announcements for this department.

THE CINCINNATI SHOW.

The Cincinnati Poultry and Pet Stock Association will hold their seventh annual show at Music Hall, Cincinnati, Ohio, January 17th to 21st, 1905. After six successful seasons in which the entries have steadily increased they are in better shape than ever to offer inducements to fanciers and breeders to attend this exhibition and have arranged their premiums on a liberal basis. The entrance fee remains the same as last year, and includes cooping and feeding. All coops will be of uniform pattern and the show will be arranged in classes.

Music Hall is well arranged for exhibiting poultry, pigeons and all pet stock, and is easily reached from all parts of the city. The attendance has increased each year, and with the recent rapid growth Cincinnati promises to become one of the best show cities in the west.

BOSTON SHOW.

The officers for the Boston Poultry Association for the year are as follows: President, Francis H. Appleton, Lynfield, Mass.; Vice Presidents, George B. Inches, North Grafton, Mass., Edward Brooks, Milton, Mass., Oliver Ames, North Easton, Mass., Augustus Hemenway, Canton, Mass.; Secretary and Treasurer, Samuel H. Roberts, Pawtucket, R. I. Executive Committee—C. Minot Weld, Readville, Mass., Walter C. Baylies, Taunton, Mass., Arthur R. Sharp, Taunton, Mass. Superintendent of poultry T. Farrer Rackham, East Orange, N. J. Superintendent of pigeons, C. E. Twombly, Boston, Mass. The officers are the same as in the past with the exception of the secretary and treasurer. This means that the show to be held in Mechanic's building Jan. 17-21, 1905, will be run the same as the shows have been and every effort will be made to make the coming show equal to any of the previous efforts. But then everyone knows what the Boston show is and what the management stands for. It requires a large number of judges to pass upon the birds in this, America's greatest show, and the management has always secured the best talent obtainable. The special judges that have been engaged for the coming show are as follows: J. T. Cothran, New Rochelle, N. Y., Hamburgs; W. C. Denney, Rochester, N. Y., Buff Plymouth Rocks and Buff Wyandottes; Dr. N. B. Aldrich, Fall River, Mass., R. I. Reds; S. W. Rogers, Brockton, Mass., Partridge Wyandottes; W. R. Graves, Springfield, Mass., White Wyandottes; Halstead Seudder, Glen Head, L. I., Barred Plymouth Rocks; George H. Northup, Raceville, N. Y., Single Comb Black Minorcas. These judges have been engaged for these special classes but they may be assigned to additional classes. The remainder of the classes will be judged by the following: Sharp Butterfield,

Windsor, Ontario; W. B. Atherton, Randolph, Mass.; H. B. May, Natick, Mass.; Henry S. Ball, Shrewsbury, Mass.; C. A. Wheeler, Brighton, Mass.; J. F. Watson, Nashua, N. H.; H. H. Bumford, Waltham, Mass.; T. F. McGrew, New York; P. Williams, Taunton, Mass.; T. F. Rackham, East Orange, N. J.; George V. Fletcher, Belmont, Mass.; J. H. Drevenstedt, Johnstown, N. Y.; R. G. Bailey, Newark, N. J.; W. J. Stanton, New York, and J. F. Crangle, Simsbury, Ct. The pet stock will be judged by T. C. Turner of New York and the cats by T. F. Rackham. The pigeon judges will be announced later. The management believes that this is as strong a list of judges as was ever invited to judge a poultry show. The prize money will be the same as in the past—\$5 for first and \$2 for second, and there will be the usual long list of cash specials. There will be a score of the \$100 champion cups for competition, a new one being added this year for the best male Partridge Wyandotte.

HOLYOKE, MASS.

The poultry breeders of Holyoke, South Hadley Falls, Fairview, Granby and Chicopee, met at K. of P. hall Saturday night and formed an association to be known as the Holyoke Poultry and Pet Stock Association. The meeting was largely attended and much interest was shown, and organized with the following officers: President, Robert P. Cunningham, of Holyoke; first vice-president, Fred Childs, of Holyoke; second vice-president, H. S. Williams, of Chicopee; secretary and treasurer, Geo. Barnett, Jr., of Holyoke; directors, S. A. Anderson, of Holyoke; George A. Lamb, of Holyoke; James Beattie, of South Hadley Falls; George F. Eastman, of Granby, and A. C. Chapin, of Chicopee. The various committees were appointed to find suitable hall, by-laws, etc. The club starts off with a membership of about 60, with the indications that it will reach 100 by next meeting, which will be held at the same hall Saturday evening, Dec. 17.

DETROIT, MICH.

The International Poultry, Pigeon and Pet Stock Club of Detroit, Mich., will hold their second annual exhibition in the Detroit Light Infantry Armory Thursday, January 12th to 19th, 1905.

Judges—T. F. Rigg and W. C. Denny. Awards by score card. Uniform cooping.

Liberal cash prizes, payment of which before the close of the show—same as last year—is guaranteed.

State Silver Cups and Club Ribbons of the American White Plymouth Rock Club and the National White Wyandotte Club, a handsome silver cup for Buff Plymouth Rocks, open to all, and a valuable silver cup for the best white bird in the show; also the club ribbons

of the American S. C. Brown Leghorn Club, the American Orpington Club, and The Blue Andalusian Club of America.

Judging will be completed and ribbons up before show is opened to the public.

Special ribbons for the most typical shaped birds in every class, together with specials for most perfect heads in several popular classes, will be a feature.

At close of show exhibits can be shipped direct to big Chicago show, if desired, arriving in ample time for opening.

Entries positively close January 7th, 1905.

A postal will bring you a premium list.

S. Z. HARROUN, Secy.,
269 Harrison Ave.,
Detroit, Mich.

TWO BIG SHOWS IN ONE.

The Ohio State Poultry Association has decided to join the exhibition of the Dayton Fanciers' Club in the Armory, at Dayton, O., on January 25 to 31, 1905. This combination means that this will be one of the greatest exhibitions of poultry ever held in the Middle West; over \$150 in cash has been put up in special prizes, besides numerous other specials. With entry fees at only 50 cents, which includes cooping and feeding, this show ought to bring out a good string of birds. As the space is limited to 1,600 birds, entries must be made early. Theodore Hewes, the well-known judge, and other prominent judges are scheduled to place the awards.

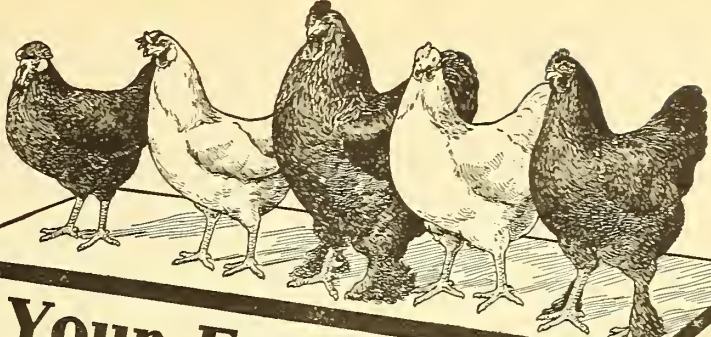

As the Dayton Fanciers' Club is noted for its square dealing, and the fulfilling of its promises, exhibitors will get all that is coming to them. The secretary, Mr. Lenz, is an old fancier, and will give his undivided time to the show. This means that birds will have his personal attention and the best of care. Entries are already in from eighteen different states, and every variety in the Standard will be represented. Specials from ten different clubs will be up, several of them having this as their state meet. Make your arrangements to put this show on your list. The secretary will mail you premium list and entry blanks on application. Address: Carl W. Lenz, Reibold Building, Dayton, O.

KANSAS WHITE WYANDOTTE CLUB MEETING AND SHOW.

The club met and organized Dec. 14, 1904. Following is list of officers: President, J. M. Beecher, Jr., Belleville, Kan.; first vice-president, W. A. Dunn, Great Bend; second vice-president, Mrs. Dr. Wilson, Nickerson; secretary-treasurer, Mrs. M. M. Ginnette, Florence; registrar, W. J. Carson, Dalton.

The show was a hot one, there being 203 White Wyandottes, quite uniform, and running from 93 to 95½, there being many ties of from two to four people. This class was almost one-third of the show. Mrs. Dr. Wilson won the National W. Wy. Club Silver Cup. She and Beecher & Beecher were a tie, but the cup went to her under the weight clause.

The most important action by the club was the formation of a "Kansas White Wyandotte Peerage," a register of Standard-bred, heavy laying birds with their pedigrees and egg records. The details of the plan are in the hands of

Your Egg Money.

It makes a lot of difference to you whether your hens are laying only enough eggs to pay for the feed they eat or whether they are doing well enough to make you a good profit. To get the most eggs and make the most money, keep your hens in the best condition.

STANDARD POULTRY FOOD

(It Makes Poultry Pay)

will keep your entire flock in that prime condition which means health, vigor, eggs and profit. It is the great condimental food for poultry of all ages and of all kinds. It makes poultry pay, because it takes a place in the feeding ration that nothing else will. It is vitalizing and nutritious.

A larger package for the price than any other poultry food on the market. Two sizes, 25c and 50c.

Trial Offer

If we have no agent in your town, write us for our special trial offer, which we know will interest you. We make **Standard Insect Powder**.

Standard Stock Food Co., 1529 Howard St., Omaha, Neb.

Mrs. A. H. Hansel, Loup City, Neb., says: "The best is none too good for my poultry. I am using Standard Poultry Food with good results."

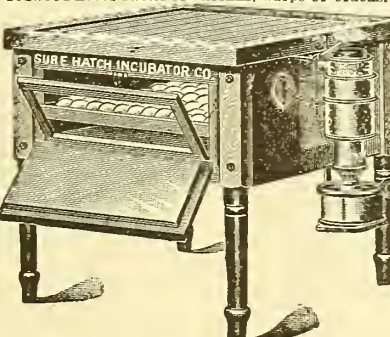

I. Brittendahl, Fremont, Neb., by using Standard Poultry Food secured 466 eggs from 23 hens last January.

COLUMBIA INCUBATOR CO., Delaware City, Del.

the officers, two of whom are breeders of thoroughbred trotting horses.

In referring to Kansas White Wyandottes in the future it will not be correct to say "A chicken is a chicken." They will be "Specimens of thoroughbred live stock," thank you, and their breeders are pursuing their work in as scientific and business-like manner as are the breeders of any other live stock.

Kansas to the front again!

BEECHER & BEECHER.

Belleville, Kan.

POULTRY ASSOCIATION CHANGES NAME.

A number of members of the Fitchburg Poultry Association met recently at Leominster and voted to transfer the association from Fitchburg to Leominster on account of inconvenience of hall in Fitchburg, also to name it the Leominster Poultry Association. The show will be held at Music Hall, Leominster, Feb. 8-10. The officers elected are: President, A. A. Tisdale; vice-president, M. H. Bosworth; auditor, I. C. Greene; superintendent of hall, F. D. Burdette, all of Leominster; secretary, Henry A. Benedict; vice-president, J. A. Ashline; treasurer, J. Lee Frost, Fitchburg; vice-president and assistant secretary, L. H. Brown, Lunenburg.

NOTICE.

The annual meeting of the American Leghorn Club will be held at Madison Square Garden, New York, Jan. 5, 1905, during the New York show.

Specials to Members—Five silver cups.

Cup on Single Comb Leghorns; member winning most points must have cock, hen, cockerel and pullet.

Cup on Rose Comb Brown Leghorns; member winning most points must have cock, hen, cockerel and pullet.

Cup on Single Comb White Leghorns; member winning most points must have cock, hen, cockerel and pullet.

Cup on Rose Comb White Leghorns; members winning most points must have cock, hen, cockerel and pullet.

Cup on Single Comb Buff Leghorns; member winning most points must have cock, hen, cockerel and pullet.

W. W. BABCOCK,

Sec. and Treas., Bath, N. Y.

ROCHESTER, MINN.

A very successful show was recently held at Rochester, Minn. This was well patronized locally and was considered a great success. The judging was done by G. D. Holden, who spoke in very complimentary terms of the exhibits.

ROCKFORD, ILL.

The Rockford Poultry and Pet Stock Association will hold their show Jan. 6-21, 1905. D. T. Heimleach has been secured to do the judging. For premium list and other information address the secretary, Chas. S. Gilbert, Rockford, Ill.

EVANSTON, ILL.

The Skokie Fanciers' Association of the north shore towns, north of Chicago, will hold their first annual show Feb.

2-4, 1905, at Evanston, Ill. The association now has a membership of sixty-five. A prominent feature of the show will be an exhibition of dogs. Dr. F. S. Childs, of Winetka, Ill., is secretary-treasurer. Premium lists will be ready Jan. 1.

KANKAKEE, ILL.

The Kankakee Poultry and Pet Stock Association will hold its fourth annual exhibition Jan. 11-17, 1905. Ben S. Myers, judge.

They are offering \$40 cash as specials, and cash premiums on single specimens in every class—\$3 first and \$2 second.

Write E. P. Vining, secretary, Hospital, Ill., and get a list telling all about it.

TO GOLDEN WYANDOTTE BREEDERS.

The question is so often asked, "Why are not the Golden Wyandottes more popular when they are such grand fowls?" This question is easily answered.

It is simply because the breed has never been pushed.

Unless those who are breeding this variety will unite their energies and try to give the Golden Wyandottes the prominence of which they are worthy they never will receive their just deserts.

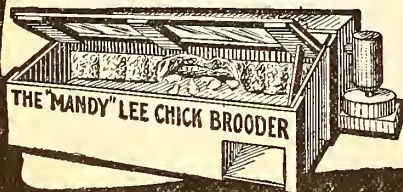

Let me ask, why are the White Wyandottes so popular? There are two reasons. First, they are grand fowls and worthy of the attention of poultry

The "Mandy" Lee

INCUBATORS AND BROODERS

"There's no use talking, you've got them all skinned on Incubators and Brooders," said a prominent Chicago poultry-raiser a few days ago. "I thought I saw some good machines at the 'Big Show' in St. Louis, and I did, but nothing to compare with the 'Mandy' Lee." **Have you seen them?** If you haven't, it's time you had. There are **nine** separate and distinct improvements on these machines, and every one of them is worth **dollars** to you—any one of them alone is worth more than the price of the machine—the perfect circulation of the air; the safety device for the lamp; the protection we furnish to the chicks in the egg-chamber; the invaluable and life-saving sub-nursery, the most valuable improvement that has been made on an incubator for years; and the nursery proper, with the door in the bottom, which permits the transferring of the chicks to the brooder without opening the front door of the incubator at all. These are a few, and only a few, of the many points of superiority to be found in these machines. We say **these** machines because every one of these ideas is original with us and fully protected by patents and will therefore not be seen on any other line of incubators or brooders. They are so simple and yet so valuable that you will only wonder why some one has not thought of them before. There are no sickly chicks here—no cripples. Every chick goes out of the incubator and into the brooder in perfect condition.

If you have ever tried to raise "motherless" chicks you know how important a good brooder is. There isn't much satisfaction in hatching out 100 chicks and then losing 50 or 75 per cent of them in a brooder. The fault is not always with the brooder, but quite frequently it is. It won't do to put chicks in a box full of hot air and then expect them to keep warm with the same air they breathe. **Direct Contact Heat** to their bodies is what they must have, and they get it in its most perfect form in The "Mandy" Lee Brooder; they "feel the felt," so to speak, and get just as much heat as they desire—get it when they want it and where they want it—on their backs—just like the old mother hen would give it to them, and at the same time they may have their heads out in the fresh air if they want to. That is what makes them strong and healthy and it is the kind of a life they lead in this brooder of ours. All of these things are explained in detail in our handsome new catalogue that we want to send you free of charge.

May We Send You a Copy?

GEO. H. LEE CO., BOX 71, OMAHA, NEB.

breeders; second, back of this variety are two strong clubs! One of these clubs alone has almost twice as many members as any club in America that is behind any other breed. The results of such an organization have been almost phenomenal.

All the club efforts that could possibly be brought to bear on some varieties could not make them popular, simply because they do not possess desirable qualities. This is not the case, however, with any of the varieties of Wyandottes. Their qualities are such that make them desirable, especially as a general purpose fowl.

The Golden breeders have appropriately been termed "The Beauty Breed" on account of their beautiful plumage. While they have this beautiful plumage, they also have all the good qualities that belong to Wyandottes in general, and the beauty "thrown in for good measure."

Now, fellow breeders, let us unite forces as we never have before, and try to put new life into the club which is young and growing. Send in your name for membership, and one dollar as membership fee, and try to get other Golden breeders you may know to do likewise. We are soon to get out a club circular which will contain the names of the club members, so join now that your name may appear in this list. By so doing you will let Golden breeders of the country know that you are one of them.

A. W. DAVIS,

Secretary of Golden Wyandotte Club.

Big Rock, Ill.

ANGOLA, IND.

The catalogue for the Tri-State Poultry and Pet Stock Association show, to be held January 18-21, 1905, is now ready for distribution. Write for one to the secretary, H. M. Crain, Angola, Ind.

The Silver Wyandotte Club cup for Ohio has been transferred from the Columbus show to the Toledo show. Sharp Butterfield has been added to the list of judges at the Toledo show.

Officers of American R. C. B. Leghorn Club for 1904 and '05:

President, W. W. Kulp, Pottstown, Pa.; Vice President, Sara A. Little, Clyde, N. Y.; Sec.-Treas., Fred Alger, Waukan, Wis.

Executive Committee: E. D. Pierson, Addison, N. Y.; Dr. Paul Kyle, Flushing, L. I.; R. D. Button, Canastota, N. Y.; Bert B. High, Detroit, Mich. Mrs. Clara S. Bissell, Montrose, Pa.; F. W. Brooke, Ithaca, Mich.

Advisory Board: Abt, Adam, Berlin, Oklahoma; Buss, Roy H., East Ackworth, N. H.; Cook, J. W., Ponteo, Ind.; Courter & Son, Delaware, Ohio; Doan, William J., Frost, Ohio; Fritz, Mrs. E. E., Bellville, Wis.; High, Bert H., Police Headquarters, Detroit, Mich.; Hogeboom, S. B., Ontario, N. Y.; Hummel, S. A., Freeport, Ill.; Harroun, F. M., Spencerport, N. Y.; Jones B. D., Sandy Creek, N. Y.; Klock, Mrs. Lillie A., West Burlington, N. Y.; Loehr, Charles, Malvern, Ohio; Moore, Fred, Jr., Youngstown, Ohio; Milhous, C. R., In-

dianapolis, Ind.; Mendenhall F. G., Cooperstown, Pa.; Norrys, Myra T., Ridgewood, N. J.; Radcliffe, W. J., Williamsfield, Ill.; Reed, Dr. F. M., Wyandotte, Ill.; Randolph, Mrs. J. L., Cutler, Ohio; Schulz, John C., Station D, Route 1, Milwaukee Wis.; Shaw, Fred H., Utica, N. Y.; Tabor, Floyd C., Worcester, N. Y.; Voight, Henry E., Hamburg, Wis.; Watson, H. C., Clyde, N. Y.; Noyes, B. Buffum, Greenfield, Mass.

With the advent of new officers comes the beginning of the new year for our club. Be charitable towards the failures of the outgoing officers and resolve that you will assist the new ones in every way in which it is possible. There is one point in which the club is thoughtless. It is expected that the secretary should do all the work, kindle all the enthusiasm and bear all the blame and yet not a penny of compensation is hinted at. This thing should stop here and now. It should not be necessary for him to be obliged to ask that the dues be paid. As members we have no more right to neglect to pay our dues than he has to refuse to receive them.

One thing which helps all breeds is "the good word spoken in season." Remember at least once during the year to write a short article for some of the poultry or agricultural papers calling attention to some of the merits of our breed and thus win it friends. There will be no trouble in finding good things to say.

I hope that each member will feel in honor bound to send in the name of at

\$1.50 and What it Will Do

ORDER NOW

The New Standard of Perfection, which will soon be issued by American Poultry Association, is in such demand that the sooner you get your order in the better chance you stand of getting one of the first editions. The Standard is a necessity to every poultryman. It is the authority which judges go by at the poultry shows. It describes every standard variety, giving the correct shape, size, color, etc., that a perfect bird should be. With a copy of this book you can judge your own fowls. It enables you to know your best birds, which to take to shows, which to mate for best results. The book will contain over 300 pages with nearly 100 illustrations. The price of it made by the American Poultry Association is \$1.50.

But the Special Offers of

American Poultry Journal

Help you get the New Standard cheaper

1.—Send us One New Subscription to the American Poultry Journal at its regular price of 50 cents a year and we will let you have **The New Standard for \$1** instead of \$1.50.

ON POULTRY for 1905 is the most practical book ever published on the care of poultry in health or disease. Gives best plans for houses, how to feed for more eggs and how to MAKE BIG MONEY. Send 15c for mailing. Fowls and eggs for sale cheap.

JOHN BAUSCHER, Jr., Box 130 Freeport, Ill.

least one new member before the beginning of a new year. It would help the breed greatly if more of the members would show their birds so that we might know where the best stock is to be found. There is no advertising medium so good as the show room, no criticism so perfect as the comparison of our own birds with others.

In retiring let me thank you all for unfailing courtesy and patience. During the summer the pressure of my own business has crowded out nearly everything which I had planned to do for the club. Mr. Alger will take up

lowest score was 91½ and the highest 96. They had four males score 95 and 95½, several females scoring over 95, one going to 96. These, with their famous 96½-point cock, which Judge Rhodes says is the finest Langshan he ever saw, gives them the finest lot of Langshans in the country.

Messrs. Miller & Son are certainly to be congratulated on the fine showing that they can make.

More interest is being taken each year by local fanciers and the membership in the association has doubled

THE CHAMPION CHALLENGE CUP WINNER, BOSTON, 1903.

the work with enthusiasm and do much which was impossible for me.

Again thanking you for all your kindness I am Yours truly,
Clyde, N. Y. SARA A. LITTLE.

The Central Missouri Poultry Association held a show at Boonville, Mo., Dec. 13-16, '04, and was a success in every way.

Chas. G. Miller & Son, Boonville, Mo., entered only their White Langshans and won 1st cock, 1st and 2nd cockerels, 1st and 2nd hens, 1st, 2nd, 3rd and 4th pullets and 1st and 2nd pens. They did not enter any of their Black Langshans, but brought Judge Rhodes home with them and had him score 99 birds. Their

since last year. The judges secured are Chas. McClave, F. C. Shepherd and S. B. Johnson, and negotiations are pending with several others, and there will be a full corps of competent judges to pass promptly on all exhibits.

Premium lists will be ready early in December and will be mailed about December 10th. Fanciers not receiving them will confer a favor by sending in their names to the secretary, A. E. Brooks, S. W. Cor. 7th and Freeman, Cincinnati, Ohio.

A well-kept Pekin duck will average as many eggs in six months of its laying season as the average hen will in a year.

The \$50,000,000 World's Fair

The Louisiana Purchase Exposition, St. Louis 1904.

The most wonderful the world ever saw, purchased by the Chicago House Wrecking Company. The dismantling of this exposition is the most gigantic undertaking of modern days. Millions of dollars of material for sale by us at prices that mean an enormous saving to purchasers. Now is the time to put into execution your long contemplated improvements. Buy quick because the prices we offer this material at will sell it as fast as we can make delivery.

100,000,000 Feet of Well Seasoned Lumber.

The time to buy lumber is today. Prices are advancing. Within the next 60 days you will see a decided increase in the market prices on lumber. Do not wait until the prices go down. They never will. Even though you do not happen to need any lumber today, it will pay you to purchase it now and store it for future use. It will prove to be a better investment than money in the bank. Its value will double in a year's time. The finest grades of lumber were used in the construction of this grand Exposition. The quality of the interior as well as the exterior material could not have been better and was purchased at the time with a view to strength, durability and finish. We are offering for sale everything needed in the construction and furnishing of a building for any purpose. Studding, joists, planking, dressed and matched flooring, sheathing, timbers, in fact every variety of lumber for any purpose.

Send Us Your Lumber Bill for Our Estimate.

You can save from 30 to 50 per cent if you buy at once.

This is your opportunity to build or improve your home or barn. In fact it is the chance of a life-time to get lumber below regular prices. If you are intending to build, be sure and take advantage of this offer which can only last for a limited time. We are selling material for houses, barns, warehouses, churches, halls, elevators, tool sheds, granaries and cribs, stores, school houses—in fact any kind of a building. If your County Fair buildings or race track need improvements, now is the time to order the needed supplies. Among the enormous stock we have just what you want.

Millions of Dollars Worth of Other Material for Sale.

Besides lumber, we have for sale at prices below the original cost, all kinds of SASH, DOORS, STEEL AND FELT ROOFING, PIPE, HARDWARE, MACHINERY, HOUSEHOLD GOODS, FURNITURE, RUBBER HOSE, ROOFING GLASS, WIRE AND FENCING, ELECTRICAL APPARATUS, FENCE POSTS, FIRE FIGHTING APPARATUS, STRUCTURAL IRON, PLUMBING MATERIAL, FLAGS AND POLES, ROPE, TOOLS of all kinds, TURNSTILES, STATUES, RAILING, MOULDING, IRON RODS, CONDUCTOR PIPE, EAVE TROUGHS, OFFICE FIXTURES, OPERA CHAIRS, SETTEES, and thousands of other articles.

Ask for Our Special World's Fair Catalog No. 186

We purchased and dismantled the World's Fair, Chicago, 1893, the Trans-Mississippi Exposition, Omaha, 1899, the Pan American Exposition, Buffalo, 1901, the World's Fair St. Louis, 1904. We have but little time to dismantle the St. Louis World's Fair with its millions of dollars of materials and furnishings used in its construction. Quick delivery to those that purchase now.

GLOBE INCUBATORS

Will Hatch Every Fertile Egg, and They are so Simple that Anyone can Operate Them

They are all heated with the best system of hot water pipes.

It is the only correct system for heating an incubator.

It produces an even temperature in all parts of the egg chamber.

Positively, our hot water pipe system for heating an incubator is the Acme of perfection.

All material in entire incubator is carefully selected, and the workmanship is of the very best.

The increased output each year of Globe Incubators demonstrates their popularity.

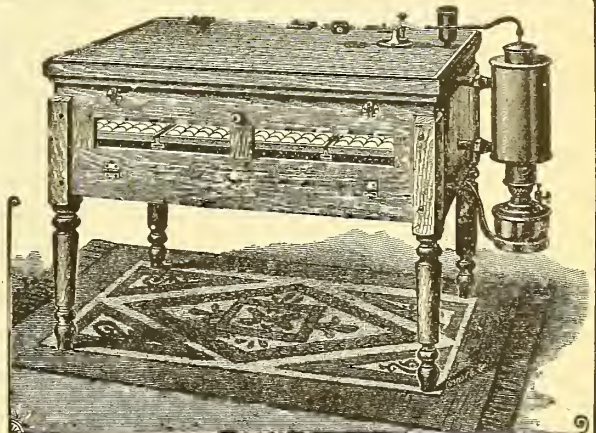

Every Globe Incubator is fully warranted and positively sold on 30 days' trial.

Our Mammoth Catalog of Incubators and Brooders, etc., will be mailed to you absolutely free. Write for it today.

C. C. SHOEMAKER

Box 940

FREEPORT, ILL.

BRODHEAD, Wis.

Mr. C. C. SHOEMAKER, Freeport, Ill.

Dear Sir: Inclosed find money order to cover cost of another 200-egg incubator and brooder. This machine is ordered for George Decker, my neighbor. The success of my first hatch with the Globe Incubator was 151 little April fools. They are fine, I tell you, and I am very much pleased.

Yours very truly,

JOHN GRAU.

LAKELAND, Fla.

Mr. C. C. SHOEMAKER, Freeport, Ill.

Dear Sir: As I have used your incubators about one year, I thought it my duty to write you in regard to them. I hatched 80 per cent. right along. I leave the machines all day and find them at work to the dot when I return at night. I would advise any wanting good results and no work to buy a Globe Incubator.

Respectfully yours,

H. L. FLANAGAN,

1882

POULTRY SHOW CATALOGUE.

The Southeastern Wisconsin Poultry and Pet Stock Association have just issued their Seventh Annual Premium List and Breeders' Directory. This is a beautiful illustrated booklet of 54 pages and is of interest to every person who buys, sells or exhibits stock of any kind. In its pages will not only be found the complete announcement of the many inducements offered to exhibitors at the poultry exhibition to be held at Delavan, Wis., January 23-28, 1905, but in the breeders' directory the breeding industry of southern Wisconsin is presented to the public in a manner never attempted before.

Every banner stockman and poultryman should have one of these beautiful books. It will be sent free, postpaid to every one sending an inquiry to the secretary.

W. E. PEPPER,*Delavan, Wis.*

BIG BUFF COCHIN SPECIALS.

Dr. J. J. Hare, of Whitby, Ontario, Canada, announces that he will offer a \$50 cup to be competed for at Chicago by members of the American Buff Cochin Club. Dr. Hare is the president of this new specialty club.

At New York the club will offer a \$5 cash prize to be awarded to the exhibitor of the best colored Buff Cochin Female, at the Madison Square Garden Show, January, 1905, and a similar amount to be awarded to the exhibitor of the best shaped male at the Chicago show, January, 1905.

Every lover of this grand old variety should send his name, with \$1 membership fee to the treasurer of the club, Mr. Lee Potts, Thornton, Indiana.

E. W. RANKIN, Sec'y,*St. Paul, Minn.*

WEBSTER CITY, IOWA.

The Webster City Poultry Association will hold its fourth annual show January 9-14, 1905. I. K. Felch, judge. This will be Mr. Felch's only show in Iowa this year and we extend a cordial invitation to the fanciers to show with us. Big show, good premiums, prompt payment. Get a catalogue today.

FRED HAHNE, Sec'y.

DURAND, MICH.

The first show of the Poultry, Pigeon and Pet Stock Association was recently held and was very successful. There were 481 specimens exhibited and the judging was done by James A. Tucker. The largest classes were the Barred Rocks, Rhode Island Reds, Brown Leghorns, Buff Wyandottes, Buff Rocks, Buff Leghorns and White Rocks. Their success is to be envied by associations that are much older.

The American Plymouth Rock Club will hold its fourteenth annual meeting at New York, Wednesday, January 4, 1905, at 3 p. m.

The 1905 club catalogue will be out January 1 and will be mailed to all interested for 4 cents in stamps.

H. P. SCHWAB, Sec'y.*..Rochester, N. Y.*

Remember that the back of the duckling is the most delicate part, and until six weeks of age should not be allowed out in heavy rain storms.

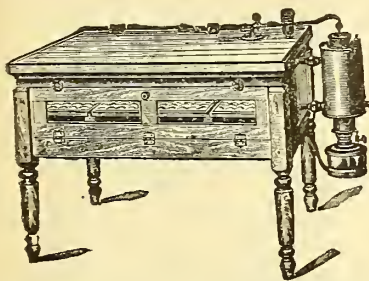

THE CHICKEN IN COMMERCE.

Advancement in the Construction of Incubators and Brooders has Been of Tremendous Importance.

From day to day the chicken is becoming more largely, and in a very notable degree, a factor in the commerce and trade of America. This is due to improved methods of production.

Only a few years ago chicken-raisers thought lightly of the incubator. It was regarded as a poor colleague to the faithful hen. Today the incubator is filling a place of unforeseen importance. Just as other things have advanced and improved, so has the manufacture of incubators.

Thousands of incubators are now being operated all over the world and with most highly gratifying results. There is more money perhaps in the chicken and egg produce field than in any other single line to which the person of small capital can turn.

The incubator—the good incubator—makes it possible to carry on the chicken and egg business in all seasons and in all climes. This is because of the successful system of hot water heating for incubators; the brooder too, plays an important part in this astounding development of conditions.

Mr. C. C. Shoemaker of Freeport, Ill., an authority on Incubators, Brooders, and everything pertaining to chickendom—is now recognized as a leader in the manufacture of supplies which successful chicken-raisers must employ. He is the manufacturer of the famous Globe Incubator and Brooder, which are heated with the best known modern hot water pipe system, and are constructed of selected material throughout, by most skilled workman. Nothing has given greater impetus to the chicken and egg business than Mr. Shoemaker's mechanical aids.

For persons who are interested now, or those who desire to become interested in poultry culture, it would be well, before going further to let Mr. Shoemaker tell you some of the things he has learned about the business. We know him to be a man honest and reliable in every way and most agreeable to deal with. Trusting one's future, so far as poultry business is concerned, to Mr. Shoemaker, would be a wise proceeding. You will find his advertisement on another page in this issue. Better write for his large catalogue as it gives many valuable pointers to the poultry raiser.

At the world's greatest poultry show H. P. Mason, the Buff Rock specialist of Fayette, Mo., won the most coveted prize of 1st breeding pen, 38 pens competing; 3d pullet and 4th cockerel. In the Missouri exhibit, competed for by Missouri breeders only, he won 1st pen, 1st cockerel, 1st and 4th pullet, 1st hen and 4th cock. Mr. Mason's pen was the cynosure of all eyes. These birds were bred, hatched and reared by Mr. Mason and he is justly jubilant over their great winnings.

W. C. Brookover, of Carlwick, Ohio, breeder of Silver and White Wyandottes, White Plymouth Rocks and S. C. White Leghorns, made some fine winnings at the Ohio State Fair recently, winning 1st cockerel, 2d hen and 2d pen. Mr. Brookover is limited on White Wyandottes, but has a large number of Silvers with plenty of quality. He can furnish White Plymouth Rocks, but is limited on Leghorns. Everything that he advertises to sell goes out under his personal guarantee. Mr. Brookover has a show record at Pittsburg, Cleveland, Columbus, Cincinnati, Indianapolis and Chicago. AMERICAN POULTRY JOURNAL readers can rely on him to the fullest extent.

Conkey's Roup Cure—Guaranteed

DAMP DAYS, cold winds, rain and snow are the forerunners of Roup. They are the index finger that points to Conkey's Roup Cure, for it PREVENTS as well as CURES. FENCE FACTS.

The Economy of Erecting a Good Fence Proven by Experience.

A good fence is an investment. Any other kind is an aggravation, an expense and an eye sore.

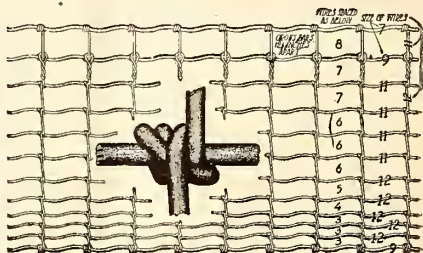

It is your intention to buy a good fence when you buy any. No man ever sets out to buy an inferior fence, knowingly, yet some have been induced by considerations of price to take a fence that has proven more costly and less satisfactory in the end. The good fence is the cheapest fence, in the long run.

The only fence now in existence that has been in use for 19 years is Page Fence, manufactured by the Page Woven Wire Fence Co., Adrian, Mich.

This is a case of the 'survival of the fittest,' for Page Fence has been made on honor from the first and is easily the highest quality fence.

United States Government contracts for fence specify "Page Fence quality." This makes Page Fence the government standard for quality.

One of the reasons for the supremacy of Page Fence is that every horizontal wire in all Page Fences is double strength, high carbon, open hearth, spring steel wire, with, at least, double the tensile strength of common fence wire of the same size.

Page Fences are springy. It has happened hundreds of times that falling trees have crushed Page Fence into the ground and on removing the tree the fence has returned to position without injury. This is the work of Page spring steel wire with its wonderful, permanent lengthwise coil.

Just to show you what Page spring steel wire is, the Page Woven Wire Fence Co., Adrian, Mich., will send free to any of our readers who expect to buy fence at any time, a thoroughly practical paring knife made from this wire. They do this as a practical illustration of what Page wire is, and with it they send a new Page Fence catalogue describing all the styles for different farm, stock, poultry, lawn and park purposes, and the characteristics of Page Fence that make it superior to ordinary wire fencing.

It is expected that our readers will write for this free knife and catalogue, and upon arrival it is requested that attention be given to the matter on pages 18, 19 and 20 of the book, which gives in concentrated form the real reasons why Page Fence is entitled to consideration; why it is more enduring, more resilient, better constructed and worthy of a better price than inferior fence that is made to sell.

To insure getting the knife, mention this publication when you write.

E. M. Quay, Silver Lake, Ind., writes: "I am about to close out my entire flock of Langshans and will breed only Silver Pencilled Wyandottes in the future. I have a fine bunch of Langshans to dispose of containing all my Chicago, Indianapolis and Detroit prize winners and a fine lot of young stock."

C. S. Byers, of Hazelrigg, Ind., made an exceptional record on his Buff Orpingtons at Dec. 4 Chicago Show, winning twelve premiums on twelve birds entered in keen competition. His birds were the largest specimens on exhibition and had the characteristic rich golden buff color which obtains in his strain.

Rudolph Poultry Yards won at Fostoria, O., on Buff Rocks—1st and 4th cock, 2d and 5th hen, 4th and 5th cockerel, 1st, 3d, 4th and 5th pullet, 1st pen; state silver cup, three special ribbons for shape and color, and \$8 to \$10 cash and other specials; 60 Buffs in show. Barred Rocks—3d and 5th cock, 3d hen, 5th cockerel, 3d pen; 82 Barred in show. These winnings, added to our list at St. Louis, Cincinnati, Cleveland, Detroit and Toledo and many other places, gives this yard a place in front ranks.

Questions and Answers

Questions asked by subscribers will be answered in this department.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir: I purchased 12 turkeys a month ago, but the matter of feeding for the winter months wearies me. My neighbors told me it does not cost any thing to keep turkeys. But I keep handing out the feed all the time. Where the feed is thickest, there you will find a turkey with a clear space around her and woe to the unlucky hen that comes within that circle; sets mangled that's all. But what is one to do with a bird that makes a direct flight of 30 feet high, worse than my leghorn pullets.

Will any of the readers of the AMERICAN POULTRY JOURNAL kindly give figures as to cost of maintenance for one or for twelve turkeys for six months, say November to April inclusive, with wheat, oats and corn \$1.60 per hundred pounds and middlings \$1.45. Bloodmeal, meat scraps and meat meal \$3.50 per 100 lbs? Cotati, Cal. L. DORAS.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Will you kindly answer the following questions in your "Question and Answer" department: 1st. Does packing eggs in water glass affect

the flavor of the eggs? 2d. Will eggs packed in water glass keep any length of time after being removed from the water glass, or must they be used at once? Is it necessary to keep eggs packed as above in cold storage, or will an ordinary cellar do? E. D.

Loup City, Neb.

1st. No. 2d. Eggs that have been preserved in water glass will keep fresh a reasonable length of time after being removed, but it is best not to remove them until you are ready to use them. 3rd. Cold storage is not necessary. Keep them in as cool a place as you can.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer through the columns of your paper: How many prongs should a S. C. Brown Leghorn cockerel have on his comb? Some say 5; others say 6 and some say it does not make any difference how many. Will it stop hens from laying if their comb freezes? Which is the best, S. C. or R. C. Leghorns for eggs? I. C.

Galesburg, Ill.

Five points is what the standard calls for, but one point, more or less, is not

a disqualification, but a defect, and will be cut accordingly. The freezing of the combs will not affect the laying qualities of a hen. We do not believe there is much difference in the laying qualities of the two varieties.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—I have a few questions that I would like to have you answer in the next journal, if room is possible.

1. What is the highest number of eggs that turkey hens have been known to have laid?

2. What was the cause of so many turkey eggs being unfertile. I set 72 eggs from one turkey hen and only got 7 turkeys out of the batch, all of which I have raised up to the present time, have a free range of 147 acres of fruit land and all the corn and oats they can eat? Set eggs under chicken hen.

Huntington, Ark.

E. G. L.

We have no record of the number of eggs laid by turkey hens. It is impossible for us to say what was the cause of the eggs not being fertile, but it was probably the fault of the hen. Turkey eggs are, as a rule, very fertile.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please state in your "Question and Answer" department, what are the symptoms of dropsy in chickens and the remedy. L. S. D.

Detroit, Mich.

Fowls are afflicted with two kinds of dropsy; that known as abdominal dropsy and the other dropsy of the heart. The first mentioned condition is shown by the enlargement of the abdomen which is distended until it nearly or quite reaches the ground when the bird is

More Eggs

If you will try the following mash for a short time you will find it will certainly result in more cash from your hens. Make a warm mash of cooked or scalded ground grain and put in a tablespoonful of

LEE'S Egg Maker

for each 12 or 15 fowls. If they are laying, give them all they will eat up clean. If not, shorten the feed so they will forage. Many experienced poultrymen who believed their hens were doing their best have been surprised at the increase in laying after feeding this food. It makes more eggs; sweeter eggs, and healthier fowls.

Put up in 2½ lb. package 25c; 25 lb. pail \$2. At all dealers, or sent direct.

GEO. H. LEE CO.,
Omaha, Neb.

**HERE'S A MASH THAT
MAKES MORE
CASH**

More Cash

If you expect your hens to lay their best you must do your best to help them. The reason they don't lay is because they can't get the necessary egg-making food. Just try

LEE'S Egg-Maker

it supplies this deficiency—that's why it makes hens lay—makes hens pay. Here's some actual proof:

"I have 40 hens and have sold 85 dozen eggs in five weeks besides using over a dozen. I shall feed Lee's Egg Maker always—it pays." MRS. B. LAMB, Nowata, Ind. Ter.

"Lee's Egg Maker beats anything I ever saw. It has doubled my egg yield." A. M. PERKINS, Washington, Ind.

Lee's Egg Maker not only makes hens lay, but makes young fowls mature fast, and insures healthy, vigorous conditions.

We won 2d cockerel at World's Fair, St. Louis, in W. Wyandotte class.

Our birds are carefully bred for the highest exhibition quality, but at the same time their utility has not been overlooked, which is of the highest degree, and places these birds in a class by themselves. All stock sold on approval, and if not satisfactory return at once by express at our expense and money will be refunded. Write us for special prices on some beautiful thoroughbred Ducks. We have 25 Wild Mallards and 40 European White Calis. OUR WORD IS AS GOOD AS CASH.

S. E. Lane, Supt.

D. Beidler, Prop., Gurnee, Ill.

standing. If examined by slight pressure of the hand the swelling is found to be soft and fluctuating; it will yield in one place, cause a great distension at another. That is it gives the sensation of a sac filled with liquid.

Fowls affected in this way are dull, disinclined to move, generally feeble, with pale combs and diminished appetite.

The treatment of fowls in this condition is not profitable, but in special cases, stimulating diet with considerable animal food, tonics and diuretics, may be tried. Iodide of potassium or iodide of iron in doses of 1 grain is particularly indicated.

Dropsy of the heart brings on great weakness, difficult breathing; the head being thrown backwards, and the breath being drawn through the mouth in order to obtain sufficient air. If forced to run the bird soon falls. This disease is usually not recognized in a bird until after death. If there are repeated cases in the same flock it is an indication of exposure to sudden changes of temperature, or to extreme cold and dampness, and these conditions should be removed. Give two to four grains of bicarbonate of soda to each bird daily in the drinking water.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Will you kindly give me the Standard weights of the Buff and White Orpingtons, for cock, cockerel, hen and pullet.

Bannock, Ohio.

T. L. L.

The Standard weights of Orpingtons are: Cock 10½ lbs., cockerel 9 lbs., hen 8½ lbs., pullet 7 lbs.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer the following questions through your paper: 1st. What would be the quickest method of getting rid of lice on a lot of three or four hundred hens? 2d. Do you think coal ashes injurious to fowls as a dust bath or as a gravel.

Gardner, Mass.

D. D.

1st. Plenty of whitewash, to which is added a little carbolic acid, and the liberal use of some good liquid lice killer. 2d. No.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—I expect to exhibit some young stock this winter and just this day I washed some of their legs, combs and wattles for the first time and when I finished the pullets were so weak in the legs they could hardly stand or walk. Should I be alarmed and will they be all O. K. in a day?

Van Voorhis, W. Va.

H. C. D.

The weakness probably came from them being chilled. Use warm water and do the washing in a warm room. After drying them thoroughly with a cloth put them in a coop near the stove until they are thoroughly dry.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Will you kindly inform me thorough your columns as follows:

There is to be a poultry show in Chicago in January. Who will I have to see in order to make an entry? How much will it cost me? How long before the opening of the show will I have to see him? What are the prizes they give?

Also: I have a fine looking, fine shaped lot of Barred Plymouth Rocks. I have nine laying hens. They are all healthy looking, and I have had very little sickness,—but their combs are not

very red, and I only get one egg every other day out of the lot. I have tried special preparations for making them lay, but to no avail. Can you suggest any way of making them healthy looking "around the gills," and making them lay? C. W. G.

Chicago, Ill.

Write to the secretary, Fred L. Kimmey, 325 Dearborn street, Chicago, Ill., for premium list which will give you all the information you desire.

Your laying hens have probably not fully recovered from the effects of molting. Would suggest that you feed a liberal amount of beef scraps and green stuff. A little clover meal food two or three times a week in the soft feed would also be beneficial.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Would you kindly answer the following question in question and answer columns? I have a Golden Wyandotte cock. He is a very nice bird but his bill is black, all but the point. Would this debar him from taking a prize. J. R. H.

The color of the beak of a Golden Wyandotte cock should be a dark horn color, shading to yellow at the point. Any other color than this would be a defect and would be cut accordingly.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—How many common hens can I keep in a coop and scratching bin combined 13½x22 feet?

How would you advise me to make a scratching bin?

Would you advise me to heat coop for winter laying? My coop faces south and I have two large windows in south front. I have two ventilators in the south and one in the north. Do you think this is too much draft?

My hens were sick. Their eyes would swell and they would die. What was the cause? My roost is so constructed that I can take it apart and drop boards are cleaned every morning.

Chicago, Ill.

E. W. S.

About 30 fowls can be kept very nicely in a house of this size.

Our space is too limited to give plans and descriptions of scratching shed here. Our book, "How to Build Poultry Houses" will give you the desired information. Price 50 cents.

You have too much draft through your house. That is what causes your fowls to take cold, which develops into roup.

Editor AMERICAN POULTRY JOURNAL.

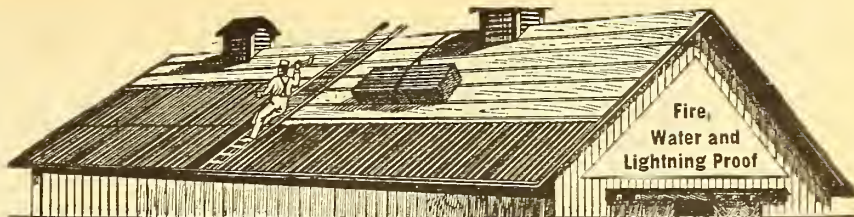

Dear Sir:—Will you kindly advise me through "Questions and Answer" department, the trouble with and remedy for chickens which seem to be dizzy, and unable to walk without going sideways. I have a couple of pullets which act this way, and they also turn their heads sideways when walking. G. G. M.

Glendive, Mont.

Your fowls are evidently suffering from congestion of the brain brought on by parasitic worms. Endeavor to dislodge these by giving essence of turpentine. It may be mixed with twice its quantity of olive oil and one to two teaspoonfuls given for a dose.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Please answer in your question and answer department: 1st. Could two young men do well on an egg farm? How much land, stock and capital would it take to start and run a

SPRAYING FOR MONEY

There's big money in every sprayed tree for the man who knows how to do it economically. We have 40,000 readers—students—who are learning from our columns how to grow and market luscious fruits and crisp vegetables—at a good profit too. Special seasons need special efforts, so in Feb., 1905, we shall publish a special edition of

THE FRUIT-GROWER

devoting 50 to 60 columns to the different aspects of "spraying." Formulas, spraying machinery; pictures of insects and the destruction they cause; when, where and how to kill them; and prevent loss will all be clearly dealt with without technicalities. Be sure you get this special number. Yearly subscription 50c. Send 25c and names of 10 persons interested in fruit-growing, for a year's trial. Our "Bro. Jonathan Series" of ten Fruit Booklets is instructive, 25c each. You can get them free. Ask us.

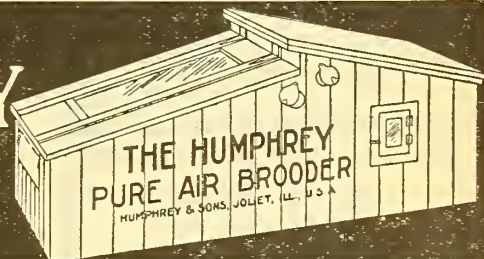

Eastern Edition for
States east of Ohio.

THE FRUIT-GROWER CO., 1307 SO. 7th., ST. JOSEPH, MO.

Don't Let Your Chicks Die!

You can double your poultry profits by raising all the chicks you hatch instead of murdering 75% of them in a death-trap brooder. This means dollars to you. Investigate the newest, most original, scientifically correct brooder ever built—

THE HUMPHREY PURE AIR BROODER

Top heat; perfect regulation of temperature; double circulation of heat and pure air; perfect ventilation; no tramping; easily kept clean; perfectly sanitary; most convenient; most economical in oil, and guaranteed to raise more chicks than any other brooder ever made. We especially urge all poultrymen who have suffered loss and disappointment from poor brooders to investigate. Already used by hundreds of leading poultrymen. Don't waste your time and kill your chicks with old-fashioned brooders—get the latest and best. You owe it to your own best interest to investigate.

World's Fair Winners—Raised in the Humphrey.

HUMPHREY & SONS, Joliet, Ill.,

North Adams, Mich., Dec. 5, 1904.

Gentlemen:—We are glad to inform you that all the young Orpington stock we exhibited at the World's Fair were raised in the Humphrey Pure Air Brooder. We were very successful at this show where we won first, third and fifth cock, second and sixth cockerel, second, third and fifth hen, first, fourth and sixth pullet and first and third pen in the Single Comb variety, and first cock, first cockerel, second hen, third pullet and first pen in the Rose Combs. We competed against 8 of the foremost breeders, including Wm. Cook & Sons of Eng. We raised about six hundred last season and the most of them in your brooders. We liked them so well that we bought six more of you this year. They are as easy to run as an incubator. You can set them at any degree of heat, 70, 75, 80 or 90, and they will run right there like a clock and without much more trouble.

Truly yours,

KNOWLES, YOUNG & CO.

Send for new book, "Poultry Helps," 48 pages. Printed in colors. It points the way to poultry success. It's free, but it means bigger profits for you. Address

Catarrh, Foul Breath.

If You Continually K'hawk and Spit
And There is a Constant Drip-
ping From the Nose Into the
Throat, If You Have Foul,
Sickening Breath,
That is Catarrh.

Large Trial Package Free—Quickly Cures.

Any person having catarrh always has a bad breath. The sense of smell and taste are nearly always totally destroyed in time so that the person who has catarrh does not realize how loathsome their disease is. They continue their K'hawking-K'hawking and spitting and spitting about promiscuously until they are shunned by every one, and the sight of them is enough to make a well person sick.

In order to prove to all who are suffering from this dangerous and loathsome disease that Gauss' Catarrh Cure will actually cure any case of catarrh quickly, I will send a trial package by mail free of all cost. Send us your name and address to-day and the treatment will be sent you by return mail. Try it. It will positively cure so that you will be welcomed instead of shunned by your friends. Write to-day, C. E. GAUSS, 2553 Main Street, Marshall, Mich.

**Good VIOLIN OUTFIT for
\$2.50**

A good substantial Violin in a heavy, well-made pasteboard case, including Bow, Rosin, Pitch Pipe, Mute, Set of strings, etc.

We make the broad claim for this outfit that no retail dealer in the land can duplicate it for less than double the price we charge. And when we say "a good substantial Violin" we mean just what we say. It is not a toy or plaything, but an instrument well made, built to produce music, and just the thing for the beginner. Has good clear tone and will be a big surprise to any one wishing a violin.

Write for one, also ask for our free catalogues of "Everything Musical" from the cheapest to the best, for the Band and the Orchestra. If you want a violin costing anywhere from \$25 up, we will send you 5 to select from. We carry an immense stock; being importers and wholesalers, we can supply any demand at prices that mean money saved to buyers. Sheet music catalogues mailed on application. Bargains in SECOND-HAND and shop-worn instruments; send for list. Address
H. E. McMILLIN, 109 Superior St., CLEVELAND, OHIO

plant that would bring a clear profit of about \$1,500 per year, and raise your own feed? C. A.

Benridji, Minn.

1st. Yes, if they possessed the necessary ability and push. 2d. \$2,000 to \$2,500 capital, 50 acres of land and 2,500 head of fowls.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—Will you please tell me through the columns of your paper what is the matter with my pullets? They have small dark sores on their heads and around their eyes which causes the eyes to become sore and swell shut, and also on their combs. They look something like a ring-worm. My pullets are strong and active. Will you please give me a remedy for this disease? J. H. H.

Oroville, Cal.

Your pullets have chickenpox. This disease is contagious and the afflicted birds should be isolated. Wash the affected parts with warm water after which apply carbolated vaseline. Thoroughly disinfect everything about your poultry yards with a solution of water and carbolic acid.

Editor AMERICAN POULTRY JOURNAL.

Dear Sir:—I see in the AMERICAN POULTRY JOURNAL inquiry how to rid a hen house of lice and mites. The way I get rid of them or keep them from coming is: I clean the roost every day—I mean the dropping board and sprinkle air slacked lime on the poles and boards and about once or twice a month I spray the inside of the house with Liquid Lice Killer or carbolic acid and kerosene, also the roosts and in the spring time I dust the fowls with Death to Lice powders and I do not have lice on my poultry. When the hens come out with chicks I dust her with the powder and the boards I spray that they set on and then large head lice that are so destructive on the chicks will die and drop off and relieve the little chicks. Everyone has a different remedy. I think grease hurts them about as much as lice for grease is bad for the plumage and the birds hate it. FRANK L. SMITH.

Flemington, N. J.

THE RUSSIAN MULBERRY IN THE POULTRY YARD.

In looking over a number of copies of your valuable paper, I find instructions of every kind for the raising of poultry; their care and feed, their housing, etc., but no mention is made of the Russian mulberry tree in this connection, yet it is a very valuable tree in any poultry yard, large or small. This mulberry was brought to this country from southern Russia by Russian Menonites, some thirty years ago. It is very hardy, standing both hot and cold weather much better than our native variety. It grows reasonably fast and forms a large bushy top, which in a very few years affords the chickens plenty of shade in the hot summer days. When three or four years old it begins to bear profusely, and during the last twenty years the trees have only failed to bear a full crop of berries twice in southern Nebraska.

The berries, while not so large as some other cultivated varieties, are of good size, varying in color from jet black to pink and pure white, and in taste from very sweet to somewhat tart. The ripening pe-

riod is from six to seven weeks, small green berries to full grown ripe ones being found on the same branch. When ripe they fall very easily, a little wind detaching them. It is, therefore, not necessary to pick the berries for the chickens, just give them free access to the mulberry grove and they will find plenty of ripe berries on the ground at any time during the ripening season.

The chickens (and the small children, too), are very fond of them. On my farm I have a small grove of mulberry trees not far from the poultry house and during mulberry time the chickens will make for that grove the first thing in the morning. These berries will do a great deal towards keeping the chickens healthy and keeping down expenses. In years when cherries and small fruits are a failure and material for canning is scarce, mulberry and rhubarb or mulberry and plum, will make very good sauce, liked by most people.

The wood of the Russian mulberry is also valuable for fence posts, as such posts will last as well as red cedar. Trees should be planted eight by eight feet; thus, in two or three years, they will make a good windbrake in winter and a nice shady place for the chickens in summer. Russian mulberry trees can be purchased at a very low price from any nursery and are easily transplanted, standing as much abuse as a cottonwood.

CARL SONDEREGGER.

Beatrice, Neb.

A man can't sow thistles and pick sweet peas—that is, not the same year. No more can you use common laundry soap for shaving and expect a smooth, soft, comfortable skin. Toilet soaps are meant to cleanse; Shaving soaps ought to soothe and soften. If you want to see the difference for yourself at the mere cost of a stamp for postage, write The J. B. Williams Company, whose offer appears elsewhere in this paper. Remember—it may be unjust, but a good many people judge you by your face.

There is one thing that strikes us favorably about Paroid roofing, advertised in our columns: It can be laid in any kind of weather, goes on smoothly, and "stays put."

A lot of people read the advertising of Paroid roofing in our columns, and are much impressed, but they are apt to conclude that any roofing that comes in a roll is much the same as Paroid. This is entirely unfair. If you like what the Paroid people have to say, be sure you find out all about Paroid before you buy.

In the awards of the St. Louis show in the December issue on Silver Spangled Hamburgs, 1st and 3d cock, 2d and 3d cockerel, 3d and 4th hen and 2d and 4th pen were credited to "Treat." This should have read Robert Treat Paine, Jr., 85 State street, Boston, Mass.

Dewitt Lanier, Cardwell, Mo., the Barred Rock specialist, writes that he has added one of Harry M. Lamon's and E. B. Thompson's best males to his already fine flock. These males have never been exhibited, but both are fine exhibition specimens and fit to show at any show. Mr. Lanier is offering eggs this season from superior stock. Write him for prices and particulars and mention AMERICAN POULTRY JOURNAL.

CAN YOU ANSWER THESE QUESTIONS?

How does the stomach of the horse compare with that of the steer in size?
When is the best time to water a horse?

What is the best indication of a horse's intelligence?

How much grain and hay should a work horse be fed?

What would you feed a speed horse?
How does the cost of raising a colt compare with that of raising a steer?

What are the principal causes of sterility in stallions?

Is it safe to work mares in foal?

How soon can a mare be bred after foaling?

Does it pay to soak corn for steers?
What is the value of corn and cob meal?

What is the value of the droppings of a steer, measured by the price of commercial fertilizers?

What does it cost to produce a pound of beef?

What do you do for thumps in pigs?

All these, and a thousand and one other questions of vital interest to every man who owns livestock, are answered in "The Standard Feeder"—a book of 160 pages, handsomely illustrated with views of prize livestock and the homes of successful stockmen. It contains the practical experience of more than 100,000 farmers and feeders who make money from stock. The price of "The Standard Feeder" is 50 cents, but one copy will be sent to you free, if you mention this paper and tell how much stock you keep. Address
Standard Stock Food Co., Howard St., Omaha, Neb.

DRY FEED—OR MASH.

The question of dry feed or mash is getting about as much discussion as score card or comparison. Both are all right in their way and just so with the feeds. Good judges can do justice to both and good reliable feed dealers can also furnish good feed of either kinds. One of the firms that we can recommend as responsible and reliable, put-

STANDARD STOCK FOOD

PRIZE BEAUTIES OWNED AND RAISED BY ALBERT JACOB HAMILTON, JR.
TWO STANDARD STOCK FOOD FROM CALIFORNIA

IT MAKES STOCK THRIVE
STANDARD STOCK FOOD CO.
OMAHA, NEB.

A copy of the above handsome poster will be sent free to any reader of this paper who writes to the Standard Stock Food Co., Omaha, Neb., mentioning this paper and telling how much live stock he keeps.

At what age can cattle be finished and fattened with greatest profit?

How much gain in weight should you make for every bushel of corn fed to steers or hogs?

What percentage of corn passes through the steers undigested?

What weight cattle command the best prices on the market?

How great a "spread" between the price paid for feeders and the selling price is necessary to show a profit?

What are the market terms used to designate different classes of cattle?

What is the period of gestation of the different farm animals?

What is the average weight of a pig at birth?

How long is a good boar capable of service?

What is the best way of administering medicine to a hog?

What is the best way to wean pigs?

ting up the very best feeds and handling the genuine Cypher Incubator and Brooders Mann Bone Cutters and other goods of the highest quality only is the Steinwerth Feed and Poultry Supply Co., 309 Market St., St. Louis, Mo. See ad on another page and get their catalogue.

Chas. P. Bennington, of West Burlington, N. Y., whose Royal Buff Orpingtons are becoming quite noted as winners at Madison Square and in the hands of his customers at other prominent shows, has recently received direct from England one of the finest cockerels ever raised, also made two previous importations during the season. These, with his own strain give him surely some of the world's best. Anyone wanting stock should write him.

Corn contains from 7 to 8 per cent of yellow fat.

Sharple's Tubular SEPARATORS

A Boon to Farmers' Wives

Why not save half the standing—lifting—washing? Make your dairy work twice as easy—twice as profitable. Our friends call the Tubular Cream Separator the "Easy Way." Try it. Catalog J-205 describes it.

Poultry Show Dates For 1904-5.**A Complete List of Dates of Poultry Shows to be Held this Fall and Winter, Compiled for the Convenience of Exhibitors and the Readers of A. P. J.**

The following shows have adopted the comparison system of judging: Cortland N. Y., Sherbrook, Quebec, Canada; Pittsburg, Pa.; New York, N. Y. At Horneillsville, N. Y., and Youngwood, Pa., both comparison and score card systems will be used. The Chicago Show will probably use both systems, as is its custom. At all other shows the score card will be used. At shows where I. K. Felch judges the decimal system of scoring will be used.

The following is a complete revised list up to date. Secretaries are requested to send in new dates and changes, if any should be made.

Date.	Town.	Judges.
Jan. 2-6	Olney, Ill.	E. E. Dalton.
Jan. 2-7	Peoria, Ill.	O. L. McCord.
Jan. 2-7	W. Middleton, Ind.	Danville, Ill.
Jan. 2-7	Dubuque, Iowa.	A. J. Biesecker.
Jan. 3-6	Moberly, Mo.	Russellville, Ind.
Jan. 3-7	Mason City, Iowa.	J. Agnew.
Jan. 3-7	Colorado Springs, Colo.	H. P. Mason.

40¢ a Doz

There's a Way To Make Poultry Pay

When eggs are 40¢ a dozen and broilers are 50¢ a pound most poultry-raisers have neither to sell. The way to make poultry pay is to have eggs to sell in the winter, when eggs are high, and broilers fat and ready for the early demand at the fancy prices that early broilers bring.

HARVEY'S Cut Clover Hay

makes poultry pay. Analysis shows that it contains many useful chemical elements necessary to the production of eggs. It aids the digestion and assimilation of other foods, and furnishes materials for muscle-building that makes healthy, strong, vigorous fowls — the kind that take "top-notch" prices. As a winter feed it is the best substitute known for the grubs and worms fowls find in summer. Increases egg-production — produces a higher grade of eggs.

HARVEY'S Electric Poultry Food

is a ground grain food made of many kinds of grains in proportion as extensive experimenting has proven most valuable. It is a perfect, well-balanced food, equally good for young chicks and growing fowls. A mash made of **Electric Poultry Food** and **Harvey's Cut Clover Hay** will assure good growth of young stock, a large production of eggs, and a healthy, vigorous flock.

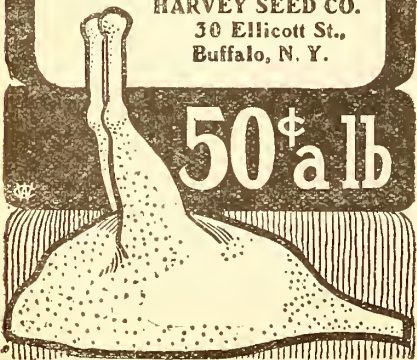

HARVEY'S MIXED GRAINS

meet the needs of a first-class grain feed. It is mixed with great care from a variety of selected grains and is especially suited to all kinds of poultry. **Harvey's Cut Clover Hay**, **Electric Poultry Food** and **Mixed Grains** furnish you an "ideal bill of fare" for your fowls.

There's a way to make poultry pay — feed the right way. The progressive poultry-raisers who have learned how to do this are coin-ing money in their poultry pens. Our free catalogue will tell you the way to make poultry pay. It lists a line of supplies you ought to know about.

HARVEY SEED CO.
30 Ellicott St.,
Buffalo, N. Y.

50¢ a lb

PEEP-O'-DAY OUTDOOR BROODER AND COLONY HOUSE COM- BINED. BUILT ON RUNNERS.

Poultrymen have been much in need of a large, roomy outdoor brooder, to be readily converted into a serviceable colony house after the chicks have taken on sufficient size.

Home-made brooder houses, built of dry goods and piano boxes, have been recommended from time to time and generally found wanting after the test of a season. "Wanting" in this case means loss of chicks, i. e., financial failure. And again, how can a poultryman living in a village, or even a small town, find suitable boxes in sufficient numbers to produce his brooders economically, taking into consideration the items of labor, hardware, glass and sundries? Suppose he does—what lamp and metal parts will he use? The lamp is the "make or break" of the brooder, and how can one succeed without the patented Peep-O'-Day lamp—the very "chick life preserver"?

As the result of numerous and repeated inquiries, the Cornell Incubator Manufacturing Company, Ithaca, N. Y., offers to the poultry fraternity its Peep-O'-Day outdoor brooder and colony house combined, built Peep-O'-Day way, and of the same shape as the No. 3 Peep-O'-Day colony house.

The new brooder, built throughout of selected tongued and grooved 1-inch pine, is 6 feet long and 3 feet deep in the clear. The front wall is 4 feet high and the back wall 2 feet, giving the roof of 22½ square feet over all, the right pitch to readily shed the water. It is most roomy and airy brooder constructed, with a floor space of 18 square feet and a cubical contents of 54 cubic feet, assuring to seventy-five or 100 chicks the requisite floor and breathing space, endowing them at birth with the Peep-O'-Day insurance policy, guaranteeing rapid growth and long life—for the Peep-O'-Day has never been known to default.

The brooder is equally divided by a movable partition into two compartments—the nursery and the sun parlor. The nursery end is double walled, top and sides, forming an insulated dead-air space lined with felt paper, and insures perfect warmth and uniform temperature. It is provided with a 24-inch Peep-O'-Day circular hover and a Peep-O'-Day lamp and metal parts. A glass door 20 inches square furnishes plenty of light and easy access to the chicks; it reduces to a minimum the duties of feeding, watering and cleaning. A movable sill brings the nursery floor flush with the bottom of the door and permits the droppings to be readily raked or swept into the open.

The sun parlor occupies the other end of the house and is connected with the nursery by an inside door and short run. It is provided with a compound wire and glass outside door 26 inches square. On warm nights the glass door is hooked up in position to admit the pure air at the will of the operator and the wire door remains closed and protects the chicks from all vermin.

A roofed and wire-covered run 3 feet by 12 feet can be attached to the sun parlor end of the house and in the 1905 model Cornell brooder and colony house combined the poultryman has a perfect machine, which cares for the chicks from the moment they are taken from the incubator to the time they have acquired the dignity of pullet and cockerelhood and are removed into winter quarters.

To transform the combination brooder into a colony house, simply slip out the middle partition and hover floor and you have a perfect and substantial colony coop.

Last but not least, the house is built on runners and can be easily pulled to fresh ground and new, sweet grass, so essential to the growing chick. This original Cornell feature in brooder house construction cannot fail to commend itself to the practical poultryman.

GET EGGS NOW.

Now is the time to get busy at making the hens lay. The prices of eggs have reached a mighty high mark and they are getting higher.

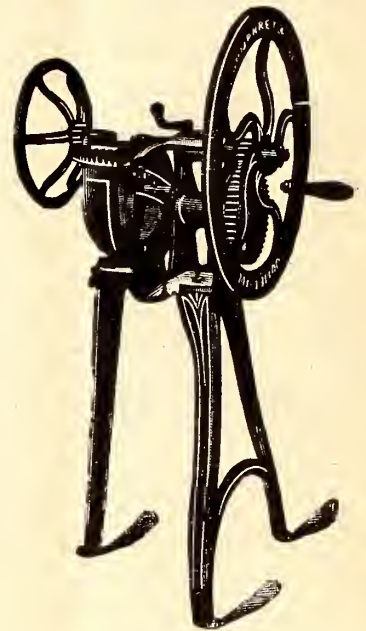

Give the hens the feed that will enable them to fill the egg basket.

"You can't make a silk purse out of a sow's ear," and the hen can't produce eggs unless you give her the right materials. The one thing most necessary for her for this purpose is cut green bone. It contains a large percentage of protein and lime, and supplies just those elements that are lacking in ordinary feeds, and is especially

valuable in making pullets lay at this time of the year when their eggs bring the greatest profits.

Most all of our readers know this, however, and perhaps the best help we can give them is to suggest the easiest and best way of preparing it. There are a number of bone cutters on the market, but of course some are better than others and it may be hard for the inexperienced to choose.

The bone cutter we know the most about is The Humphrey open hopper green bone and vegetable cutter, manufactured by Humphrey & Sons, of Joliet, Ill. This is an open hopper machine, free from partitions, with no springs, split nuts or other com-

plicated parts to break or get out of order.

Humphrey guarantees this machine to cut more bone, in better condition, in less time, and with less labor than any other bone cutter. If their claims are found to be untrue they refund the money. When such a reliable firm backs up an article with such a guarantee as that it must be about right. One other advantage about this bone cutter is that it turns so easily, and you don't have to chop the bones up in small pieces with an ax, either.

It is operated with one hand and may be regulated to cut as fast or as slow as desired. It is just such a machine as poultry raisers have felt the need of for a long time, so its great popularity is not surprising. Another reason why so many of these machines are in use today is that they are sold on a broad and liberal free trial plan which permits poultrymen to decide upon buying it after they use it instead of before. This method appeals to every one, and we advise all those who have not got one of these excellent bone cutters to find out more about them.

The Humphrey catalogue is something more than a mere advertisement. It contains much valuable information for poultry raisers and is sent free to all who ask for it. If you want one of these books address Humphrey, White St. Factory, Joliet, Ill.

Messrs. Smith and Arford, of Oakwood Poultry Farms, Marshall, Ill., offer, this month, good breeders in Single Comb White Leghorn and White Wyandotte stock at cut prices; cockerels, \$2 each; females, \$1.50; trios, \$4.50. This stock is much of it descended from Indianapolis and Terre Haute winners. They raise their stock on two large farms, and while in the breeding season their stock is carefully yarded and mated, all young stock has free, wide range. They guarantee what they are now sending out to be worth more than the price asked and they stand ready to return the money of any dissatisfied customer.

In our December issue, on page 782, in the illustrations of the World's Fair jurors, we by mistake placed the name of F. J. Bridge, Atlanta, Ga., where the name of F. J. Marshall, Atlanta, Ga., should have been. Mr. Marshall is one of the oldest poultry judges in the country and is one of four judges who officiated at both the Chicago and St. Louis World's Fair.

CHATHAM INCUBATORS AND BROODERS.

When the Manson Campbell Co., of Chatham, Ont., and Detroit, Mich., whose famous product, the Chatham Fanning Mill, is known from one end of the world to the other, decided to manufacture a line of incubators and brooders, the mere announcement was taken as a guarantee of quality.

For two years Chatham incubators and brooders have been upon the market. They no longer stand in the reflected glory of the Chatham Fanning Mill, but have achieved a fame and popularity of their own.

The same high quality for which the name Campbell has long stood is found in every part of these machines—in the smallest detail of construction.

Chatham incubators and brooders have been tested by many of the leading poultrymen of America, have been tried and not found wanting—for their modern improvements and reliable construction have made them known as the "machines that insure a full hatch."

The Manson Campbell Co. expended large sums of money and years of experimenting before the Chatham incubators and brooders were placed on the market, hence there is not a weak point to be found, but they embody all the improvements that are improvements.

They are made with two walls, within case, case of honey-dried material that has been thoroughly dried on the company's premises, are finished in antique oak, built solidly and substantially to endure for years. The steel and brass regulation is automatic in action, and insures correct heat and ventilation for a successful hatch.

The Chatham incubators and brooders are offered upon long time terms of payment. They are sent freight prepaid, and the purchaser is given many months in which to finish paying. In the meantime the machine performs the task of paying for itself.

The company has just issued a handsome and interesting new book on Chatham Incubators and Brooders which tells a story of great importance to all interested in chicken raising. The booklet may be obtained free by addressing the Manson Campbell Co., 29 Wesson Ave., Detroit, Mich.

You will notice in another column of this JOURNAL a cut of E. H. Turner & Co.'s automatic poultry feeder and water fountain, and young chick protector combined, a very necessary and useful article in the poultry yard. If you could look into the feed can you would see the adjustable water can, which holds about two gallons of water, with a 3-inch air space around it, and when the lid is on the large can the sun and hot air cannot get to it. The feed is put into the large can around water can holding about three gallons, and it feeds down into trough on outside. It will feed any kind of dry feed, one kind or more, crumbled corn, bread, grain, grit, charcoal, etc., leaving it to choice of fowls. In the spring, when you are hatching your young chicks, you can slip on the Young Chick Protector, which fits closely around the feed can, and it forms a roof over the feed in the trough on outside, keeping it dry in time of rain.

The upright wires around the outside of Protector are adjustable, which enables you to make the mesh any size you wish to admit the small chicks and keep out the large ones. You do not need to build pens. Just set your feeder in the yard with your old poultry and your young chicks are protected while feeding. One filling by test will feed 125 chicks a week, and it will feed from 500 to 700 day after day. You fill it with feed and water and you can go about your other work. Go to town, and your chicks are fed and watered. This device is very cheap and will pay for itself in a short time in the saving of labor and feed. It received a large number of very favorable comments at the World's Fair poultry show. Write for prices. Agents wanted. E. H. Turner & Co., Tipton, Iowa.

We have a letter from J. F. Davis, of Macedonia, Iowa, in which he calls our attention to an error in the December issue, where we credited him with an illustration with the first prize Buff Cochins cockerel. While the bird belongs to Mr. Davis and secured the third prize, the first prize was won by Lee Potts, of Thornton, Ind. This was an error of the photographer who furnished us the photos, he having given the wrong description of the bird. Mr. Davis does not want to assume credit for any winning he did not receive.

MILLS' 1905 Seed, Plant and Poultry Catalogue

IS NOW READY. Best one we have ever issued. Many novelties just out. Choice new flowers for the ladies. Thousands of thoroughbred fowls, also eggs for hatching of over 20 varieties. One of the best INCUBATORS built, need exclusively on our farm. Many Great Bargains of all kinds which will interest you. Our "Lesson on Vegetables" is something new and very interesting. This new catalogue is free to any one, and if you mention this paper we will send you a sample packet of very choice new Sweet Corn free for trial. Will not be offered until next year, but earliest corn in the market. Worth dollars to you. Send for catalog to-day.

F. B. MILLS, Seedsman, Box 40 Rose Hill, Onondaga Co., N. Y.

I WANT YOU....

To know that I am in the market with my chickens for the season of 1905, and have the best stock I ever handled. My birds have taken over fifty first and second premiums this season—at the Denver Poultry Show, the Nebraska State Show and the Kearney County Fair, and I also captured four premiums out of six entries at the St. Louis Exposition. I have been 15 years in the chicken business and I believe I know what good fowls ought to be, and am prepared to offer you ROSE COMB BROWN LEGHORNS, BARRED PLYMOUTH ROCKS and BUFF ORPINGTONS that cannot be beaten by any of the breeders of this kind of chickens. If you want birds or eggs write for further information and prices.

...ST. LOUIS WINNERS...

Hislop's American Strain of Toulouse Geese and his Golden Wyandottes again compete with the best in America and at the largest show—the great St. Louis Exposition. Geese, 3d and 4th cock; 1st and 3d cockerel; 3d and 7th hen; 5th and 6th pullet. Won more points than any other exhibitor in this class, and club's cup. Golden Wyandottes—the strongest class of this variety ever exhibited in the United States—4th cock, 4th cockerel, 1st and 3d hen, 5th pullet and 4th pen. Don't place orders till you see his circular giving prices, Pan American and Chicago winnings, etc., etc. Try his MITE DESTROYER, the most lasting and the cheapest ever offered the public. Satisfaction. Reference, First National Bank of his town.

B. F. HISLOP,

Milford, Ill.

Millville Poultry Farm Co.'s

PLYMOUTH ROCKS AND WYANDOTTES

At World's Fair, St. Louis

win more firsts than any three other exhibitors of their varieties. A grand total of 55 regular and special prizes in hottest competition ever known, makes best record ever made on their specialties. We offer you sons, daughters, brothers and sisters of our World's Fair winners at fair prices. Can sell you A 1 breeding birds or crack show birds, as you may choose. During December will sell a selected Pekin drake and five April ducks (unrelated) for \$15. In Plymouth Rocks we have Barred, Buff and White varieties. In Wyandottes, Buff and White. New 32-page illustrated catalogue is free, and we hope you will write your wants to

They Always Win!

Doolittle's Partridge Wyandottes

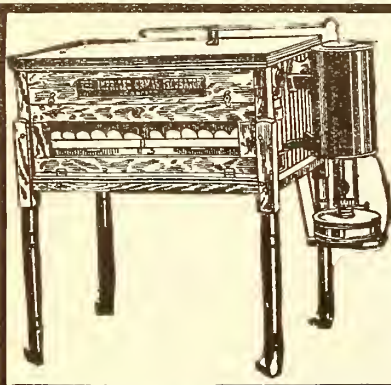

The strain that annually produces more prize specimens than all others combined. They have true Wyandotte shape, low, even combs, clean, yellow legs, with the grandest mahogany color and true Partridge markings.

Look at this Record—St. Louis World's Fair, 1904

With birds entered from Missouri, Indiana, Nebraska, Kansas, Ohio, Connecticut, Tennessee, Illinois, New York, Iowa, New Jersey, and Pennsylvania, my birds won 2d and 6th cock; 1st cockerel; 1st and 5th hen; 1st, 4th, and 5th pullet and specials for best colored male; best colored female and best shaped female. (no pens entered.) Who can beat it with ten entries in but a single class? This is nothing unusual for them. Send for card giving their Chicago and Boston winnings and you will see that it means something, and should interest you when looking for stock or eggs. To be in it means that you must get your blood where the champions are annually raised. A large color plate from life of a pair of Partridge Wyandottes mailed on receipt of ten cents in postage.

FOR
HARDY
CHICKS

HARDING'S Baby Chick Food

makes baby chicks hardy. Makes vigorous, rapid growth, insuring chick life, so uncertain at this stage, that it more than saves its cost in saving life. It adds profit where loss is the usual result. One trial test will prove its worth. It saves worry and makes poultry raising pleasurable—profitable. 5 lb. cartons, 30c; 10 lb. bags, 50c; 50 lb. bags, \$1.50; 100 lb. bags, \$2.50, f. o. b. Binghamton, N. Y. Give your chicks a chance for life by giving them food that furnishes life—Harding's Baby Chick Food. Send for free catalogue containing good points for making poultry pay.

Geo. L. Harding, Box 333, Binghamton, N. Y. U. S. A.

FEED
HARDING'S
FOOD

KEEP YOUR FOWLS HEALTHY.

These cold winter days are attended by colds, catarrh, causer, roup, swelled head and other similar troubles and diseases of the poultry yard. It is poor business to allow your fowls to be so afflicted when roup and kindred diseases can be so easily prevented and cured. J. W. Miller, the big poultry man of Freeport, Ill., has not had a case of roup, nor even an ordinary cold, on his farm for years. He prevents it by a special remedy of his own which he calls "Ideal Roup Cure." He offers to send it to any of our readers, postage prepaid, for 50 cents and guarantees your money back if it does not effect a cure. A 50-cent package will make twenty-five gallons of medicine for your fowls. You simply use it in the regular drinking water given them.

We have received from the A. I. Root Co., manufacturers of bee-keepers' supplies, Medina, Ohio, a copy of their new book called "A. B. C. of Bee Culture," the one hundredth thousand edition. Bee keeping is rapidly coming to take a prominent place and works very nicely with poultry culture, for the busy months in bee culture follow after the busy months of poultry culture.

The book is a large one of 500 pages and contains, we believe, absolutely everything that is necessary in regard to successful bee keeping. We cannot say too much in its praise, for it is really a complete encyclopedia on everything pertaining to this industry. It is splendidly illustrated, printed on the finest paper, with heavy cover, and no poultryman's library can be complete without a copy of this. The A. I. Root Co. are an old established concern and are the leaders in this line of industry.

The book is issued in three styles: Full leather, \$2; half leather, \$1.75; cloth, \$1.25, postpaid.

H. A. Emmel, Mars, Pa., the originator of the "Gibraltar Victor" strain Light Brahmas, S. C. Buff Orpingtons and S. C. Brown Leghorns that have never failed to win the blue ribbons in national shows for him and his customers, has extra fine male birds for sale, including 1st prize Light Brahma cock and the S. C. B. Leghorn cock that headed his 1st prize pens at the largest shows, besides a grand lot of cockerels in all three varieties that will do any one good to breed from.

J. M. Williams & Co., of North Adams, Mich., writes that in looking over our write-up of the St. Louis show they notice an error on R. C. Buff Orpingtons. They won 1st cock, 1st cockerel, 2nd and 3rd hen, 1st and 2nd pullet and 1st pen. We did not mention their names at all, but mentioned some one else as winners.

We regret that an error occurred, but wish to assure our readers that the list of winnings published was the list furnished us by the St. Louis show authorities. Therefore we cannot assume responsibility for them. If any errors have occurred, we will, upon proper authority from the managers of the St. Louis show, take great pleasure in making corrections.

The Winchester Poultry Yards, Winchester, Ky., are closing out their Light Brahmas and Silver Laced Wyandottes and in the future will breed White and Black Minorcas, Barred Plymouth Rocks and S. C. Brown Leghorns. This stock will be bred on three separate farms. They are now prepared to handle the egg trade and will sell eggs from their winners at the World's Fair, Washington, Cincinnati and Hamilton, Ohio; Indianapolis and New Albany, Ind., and Louisville, Ky. Their catalogue will be ready February 1 and is free to all who mention AMERICAN POULTRY JOURNAL.

George A. Heyl, of Washington, Ill., exhibited his fowls at the Ottawa Poultry Show, December, 1904, and won thirty-seven firsts, six seconds and seven thirds and two silver cups, one on the ten highest scoring birds in the show and one for best display of water fowls, all in strong competition. By referring to Mr. Heyl's ad on another page you will see that he is giving away a Shetland pony as a prize for the largest order for fowls sent in by February 1, 1905.

Chas. G. Miller & Son, Booneville, Mo., the Langshan specialists, have been breeding Langshans for the past twenty years and certainly know how to produce the good ones. They have some choice stock for sale in both White and Black Langshans. Look up their ad elsewhere in this issue and write them for prices.

THE HAWKEYE SPECIAL INCUBATOR FOR 1905.

The old and well-known Hawkeye Incubator Co., who own and operate one of the best equipped incubator factories in the United States at Newton, Iowa, announce a special machine at a very reasonable price for 1905 known at their Hawkeye Special.

They send this machine out on their regular 30 days' free trial plan, which gives the purchaser an opportunity of testing the machine very carefully and taking off a hatch of chickens before he fully decides to keep it.

These special machines are made in two sizes—100 and 200 eggs—and the company announce that these machines have all the late improvements of the Hawkeye factory and that they are first-class in every respect.

They are backed by their bank bond and every one who has had anything to do with the Hawkeye Incubator Company knows that whatever is put out by this company can be depended upon.

Their guarantee is good and their free trial plan is a fair method of selling goods.

The Hawkeye Special 100-egg machine sells for \$12.

Owing to the fact that the Hawkeye Incubator Company is a very responsible concern, we recommend to our readers that if they are contemplating buying an incubator, they should most certainly send and get the Hawkeye catalogue and also the special catalogue on the Hawkeye Special before they buy the other machine, as these two books have a lot of useful information in them regarding the successful raising of poultry, besides giving prices and descriptions of the different incubators and brooders manufactured by the Hawkeye Incubator Company. A postal card to the concern will bring these books at once. In writing address the Hawkeye Incubator Co., Box 2, Newton, Iowa.

H. G. Fish, Columbus Station, Ohio, has bred Silver Wyandottes for the past nine years and has built up a strain that is second to none. Owing to the press of other business he has not the time to devote to his fowls and has decided to close them out at half price. At the late Cleveland show he won 3d cock, 5th hen, 1st and 4th pullet and 2d pen. At Columbus last February his birds won 3d and 4th cock, 1st and 4th hen, 1st, 2d and 4th pullet, 2d cockerel, 1st pen and special for best cock, hen, cockerel and pullet. At the World's Fair, St. Louis, he won 7th on pen. Look up his special ad. elsewhere in this issue.

Delaware, Ohio, Dec. 4, 1904.
To Friends and Enquirers:

On account of continued illness and sorrow in my family I have neglected to a great extent my correspondence for the past few months. I desire to apologize for the same and wish to assure all that in the future all communications and orders will receive prompt attention. Respectfully,
CHARLES C. REED,

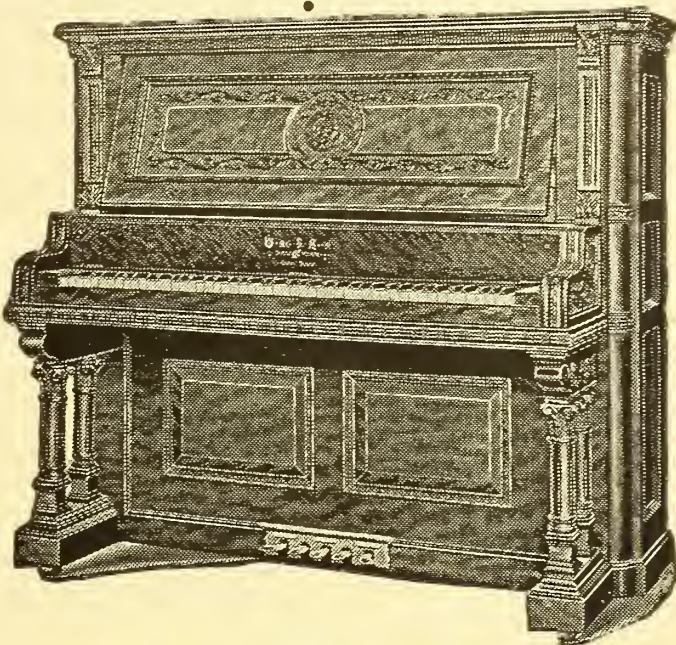

Manager Olentangy Poultry Yards.
F. L. Hooper endorses linseed meal as a wonderful egg producer, muscle grower, bone maker, flesh former, health promoter and digester, and a preventative of roup, indigestion, and many other disorders of the fowl family.

"For 36 Years a Standard Piano"

WING PIANOS

SOLD DIRECT FROM THE FACTORY—AND IN NO OTHER WAY.

When you buy a Wing Piano you buy at wholesale. You pay the actual cost of making it with only our wholesale profit added. When you buy a piano, as many people do—at retail—you pay the retail dealer's store rent and other expenses; you pay his profit and you pay the commission or salary of the agents or salesmen he employs. The retail profit on a piano is never less than \$75; often it is as much as \$200. This is what you save by buying a Wing Piano direct from the factory. Isn't it worth saving? Our plan of selling is not an experiment, but a great success. In 36 years over 38,000 Wing Pianos have been manufactured and sold. They are recommended by seven Governors of States; by musical colleges and schools; by prominent orchestra leaders, music teachers and musicians. Every Wing Piano is guaranteed for 12 years against any defect in tone, action, workmanship, or material.

A Wing Style—45 Other Styles to Select From.

Sent on Trial

We Pay Freight No Money In Advance

We will place a Wing Piano in any home in the United States on trial without asking for any advance payment or deposit. We pay the freight and other charges in advance. If the piano is not satisfactory after 20 days' trial in your home, we take it back entirely at our expense. You pay us nothing and are under no more obligations to keep the piano than if you were examining at our factory. There is absolutely no risk or expense to you. Old instruments taken in exchange.

Small Easy Monthly Payments

Instrumental Attachment imitates perfectly the tones of the mandolin, guitar, harp, zither, and banjo. Music written for these instruments, with and without piano accompaniment, can be played just as perfectly by a single player on the piano as though rendered by an orchestra. The original instrumental attachment has been patented by us and it cannot be had in any other piano.

Wing Organs are made with the same care and sold in the same way as Wing Pianos. Separate organ catalogue sent on request.

A Book You Need—FREE If you intend to buy a piano you need the "Book of Complete Information About Pianos," which we publish and will send free if you write for it. It tells everything that anyone can possibly want to know about pianos. If read carefully it will make you a judge of tone, action, workmanship and finish. It is the only book of its kind ever published. You can have it free if you send us your name and address.

ANTI-LOUSE Roost Brackets

will protect your fowls from midge louse or red mite ravages. Impossible for lice to pass from perch to wall or wall to perch. Most convenient and practical bracket made—the only one that lifts out of the way for cleaning, spraying and painting underneath perch. For single and combination roosts. Price, 75c a pair.

THE KEYES-DAVIS CO., Ltd., Dept. B, Battle Creek, Mich.

HADAWAY'S

Partridge Wyandottes

At the recent Brockton Show, which was the largest exhibit of this breed in the world, (31 more single entries than at St. Louis), I won the \$100 championship cup, the \$75 breeder's cup, and more than one-third of all regular prizes. It is the strain that always wins. Birds and eggs at reasonable prices.

J. B. HADAWAY

1st hen at New York, 1904 Brockton, Mass.

BUFF ROCKS EXCLUSIVELY.

I have mated five pens for breeding purposes this season. There is not a bird in the lot but what is strictly high class, having selected them from a flock of 300 line-bred birds. Will give my customers eggs from the same pens that I hatch from, as they are the only birds I have on my place. Let me book your order for eggs now and ship when wanted. Eggs, \$2.50 per 15. No reduction in quantities. Stock all sold out.

HERBERT H. COWEN, Virden, Ill.

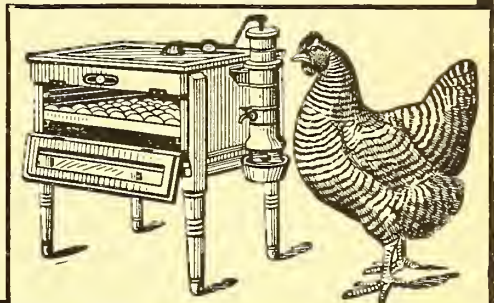

200-Egg Incubator for \$12.80

The simplicity of the Stahl incubators created a demand that forced production to such great proportions it is now possible to offer a first-class 200-egg incubator for \$12.80. This new incubator is an enlargement of the famous

WOODEN HEN

recognized the most perfect small hatcher. This new incubator is thoroughly well made; is a marvel of simplicity, and so perfect in its working that it hatches every fertile egg. Write for anything you want to know about incubators. Send for the new free illustrated catalog with 14 colored views.

GEO. H. STAHL,
Quincy, Ill.

BUFF World's Fair Champions Cochins

1st cock, 1st pen, 2d cockerel, etc., pronounced by the most experienced and competent critics, such as Mr. Mr. McGrew, as the equal of any that have ever been shown in America. One cock described as simply a wonder. What higher eulogy can any ambitious breeder desire. These noted birds were bred in my own yards and I have many more like them that I am now offering for sale at low prices considering quality, as I do not intend to exhibit again this year. Write at once for what you want to

GOLDEN WEST RANCH

JOLIET, ILLINOIS

A "Ringlet" 1st Prize New York Cockerel and two of his sons.

"RINGLETS" Soar Still Higher.

At the Imperial Show of the Nation, Madison Square Garden, New York, January, 1903.

E. B. THOMPSON'S BARRED P. ROCKS

Stamped their superiority in the most decisive manner, winning again the Superb Challenge Trophy, value \$100, for best cock, cockerel, hen and pullet. This is the third time the "Ringlets" have won this grandest of all trophies, giving them now absolute and final ownership. In this "COLOSSAL CONFLICT" the "Ringlets" lifted the great National Sweepstakes Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. My Barred Rocks won double the number of silver cups and special prizes of any competitor, including the sweepstakes special in gold for best Plymouth Rock on exhibition male or female any variety.

The "RINGLET" World's Record of four years in succession at New York is a page of history. The "RINGLET" World's Record of first on exhibition pen at this great show, three years in succession, is the undisputed champion.

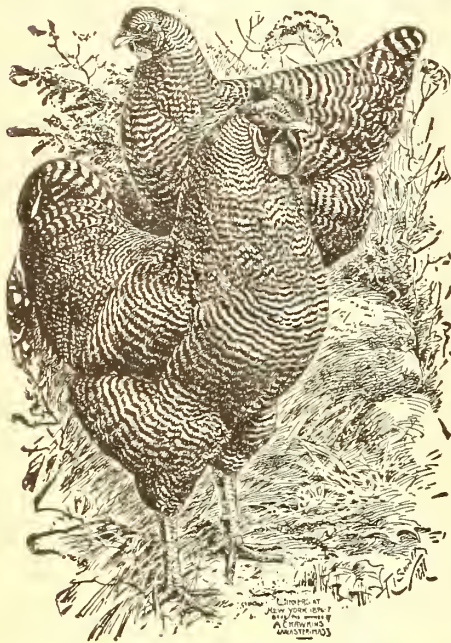

The "Ringlet" clean sweep 1st, 2d, 3d, 4th and 5th prizes on pullets has never been approached at Madison Sq. Garden, and stands alone and unequalled.

The "Ringlets" have won at New York—exhibited by me personally—a grand total of 87 prizes. 36 of these are 1sts and specials, being more than double the number of 1st and special prizes won by any competitor in the history of the show.

GRAND STOCK FOR SALE

In any number. Rare bargains in yearling breeders in lots of a trio or 100. Show birds fit to win in the fastest company—600 choice breeding cockerels. Richly illustrated 36-page catalogue on application. It is full of original illustrations of New York winners from life. Eggs from finest exhibition matings. One setting \$5, two settings \$9, three settings \$12, four settings \$15. Address

WYANDOTTES, SILVER WHITE AND BUFF.

SHOW BIRDS
THAT CAN WIN IN ANY
COMPETITION.

Have won more prizes at New York, Boston, Washington, and America's greatest shows than all others. My matings this season are the best I ever owned. * * * * *

At the Great National Show, WASHINGTON, D.C., in hot competition with over 300 birds of these varieties, the best that could be found regardless of price, I won 45 Regular and Special Prizes on 39 Entries, including First Prize on Breeding-Pen in each variety, Special for Best Display in the American Class, Special for Best Exhibit of Plymouth Rocks, Sweepstakes Special for Best Cockerel in the show (Bantams excluded), and this on my First Prize Barred P. Rock Cockerel. My winning White Wyandotte cock was pronounced by the judges to be the best they had ever seen. I won twice as many first prizes as all other exhibitors of these varieties. My BUFF ROCKS, at Boston, 1899, in hot competition, won more first and special prizes than all others. My customers are winning all over the country. If you want the BEST, write me. Hundreds of Choice Exhibition and Breeding Birds at Honest Prices. Catalogue of America's finest Plymouth Rocks and Wyandottes free.

A. C. HAWKINS, Lock Box 25 Lancaster, Mass.

The Proof of the Pudding

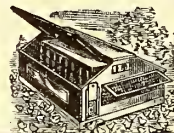

You know the rest. The proof of the high merit of Reliable Incubators and Brooders is the results obtained by their thousands of users. That's what has made their name, fame and popularity. They require no skill to operate—a child can run them. They are not experiments. It is a hard-pan fact that

RELIABLE INCUBATORS and BROODERS

DO THE WORK. One customer writes "They're as certain as an egg is an egg." You don't have to take our word for it—we guarantee them to satisfy or refund your money. It takes **quality** to back such a guarantee. Send 10 cents (to pay postage) and get our catalogue. It tells why Reliabilities win in test and contest.

December 100 Per Cent Reports

An open Nest Paper Incubator is our Latest

We just received five letters from California, all in one day. Our secret is living air and tons of it, and not hot, dry, dead air. P. Miller & Ridell, Petaluma, Cal., 100 per cent raised four times. H. H. Brown, Calistoga, Cal., 97 per cent hatched and 100 per cent raised three times. F. E. Calderwood 100 per cent raised six times. Napa, Cal., A. Warren Robinson. 95 to 100 per cent is positive every time. Dozens of the large egg farmers say your Incubators and Brooders are wonderful; we have never seen chicks grow so. Air, hover and a natural heat does it. Petaluma, Cal., F. S. Low: It's no trick to raise 95 to 100 per cent with your Brooder on a large scale. We now have over 100 of your Brooders on our egg ranch out on the Colney plan. Send for 1905 catalogue, its free, of 100 per cent reports. New Improved Incubator: its a real hen; and our 96-page 1904 catalogue 15c. "Nature and Its Laws, and the Hens' Secrets," a book of information, something you never saw in print before. R. I. Red eggs \$10 per 100. Pullets or hens in doz. lots \$2.50 each.

Do You Want to MAKE AN INCUBATOR?

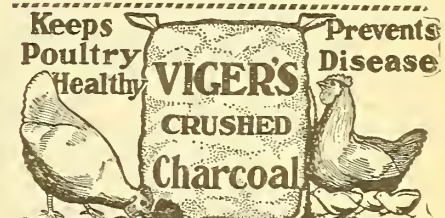

Then we can help you. Our new catalogue of Incubator Plans and Fixtures contains a complete series of drawings and half-tone engravings, showing each step in the construction of an "up-to-date" Hot Water Incubator. The illustrations are accompanied by directions covering every detail of construction, from nailing together the first two boards to adjusting the regulator on the finished machine; and these directions are so plain and simple that any one who can handle a hammer, saw and plane, can make his own Incubator. Send us your address and get the Plans by return mail—FREE.

OAKES MFG. CO. Box 6, Bloomington, Ind.

Bailey's Orpingtons

Winners at the World's Fair and Chicago shows. 24-page catalogue in colors for stamp. Buffs, Whites, Blacks, Diamond Jubilees and Spangles. Rose and Single Combs. Stock for sale. Eggs for hatching. Satisfaction guaranteed. Now is writing time. Chestnut Grove Orpington Farm, F. C. Bailey, Reading, Mich. R.R.19

Chemically pure. The best thing known to keep poultry strong, healthy and in good laying condition. Prevents disease, especially from wrong feeding. Not a drug, but Nature's own purifier and disinfectant. Fowls eat it readily. Prepared as follows: Granulated, two sizes, for mature poultry and chicks; pulverized for soft feed. Send \$1.00 for trial bag of 50 lbs. Special price for quantities. Write for samples.

VIGER'S COAL & WOOD CO. 434 20th St. Detroit, Mich.

Petersen's Houdans**Reign Supreme at the Nation's Greatest Shows**

My record never approached by any breeder. **BOSTON, 1900, 1902, 1903.** Our Houdans were awarded 48 regular and special prizes, including the \$100 Champion Challenge Cup.

ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdan's. Also highest honors at **Madison Square Garden, Philadelphia, Pan-American Hagerstown, Toronto.** No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Photographs on application. Eggs in season.

REV. C. E. PETERSEN, Pres. Houdan Club, Drawer 12, Franklin, Maine

SIEMS
Found the Better Way

Follow Nature's Lead.

Artificial hatching of chicks never can equal the hen. Nature set the limit. Two hundred thousand poultry raisers were wasting half their good eggs every year in artificial incubators until Siems, the eminent German patentee, perfected his

NATURAL HEN INCUBATOR.

He showed the new way. Users everywhere say it is the only way. **It is the only way,** because it is the hen's own way. The hen plays her own part. Siems' plan makes her work every day for the full 21 days, and then the chicks come as Nature intended they should.

You Can't Beat the Hen.

Write and ask Siems about his plan. It saves nearly all the cost. Think of a **200 Egg Hatcher for Three Dollars!** Why pay incubator manufacturers their exorbitant prices? **SIEMS WANTS LIVE AGENTS.** He offers liberal terms and the plan only needs showing to make a sale. Write him. He sends **Catalog and 25c lice exterminator formula FREE.**

NATURAL HEN INCUBATOR CO.,**J. F. SIEMS, Patentee.****B. 4, Columbus, Nebraska.**

**STANDARD
POULTRY
ACCOUNT
BOOK**

By **Henry L. Breckhoff**
Chicago, Ill.

Price 50 Cents

**STANDARD
POULTRY
ACCOUNT BOOK**

IS DEDICATED TO BUSY POULTRYMEN THROUGHOUT THE COUNTRY and is designed especially to make easy and enjoyable the correct keeping of accounts by the day, month and year of all expenses and income pertaining to the Poultry business.

The **STANDARD POULTRY ACCOUNT BOOK** is the best and most practical account book ever devised for the poultry man. This book has been arranged with a view of obtaining thorough satisfaction with the least possible labor. It is just exactly what poultrymen want.

The system is so simple a child might have entire charge of the book and keep the accounts correctly, and yet, it is so complete as to enable the user to know just what money has been expended and for what purpose; the monies received and from what source, and cash balance on hand and in bank.

It analyzes your expenditures and receipts in a way as complete and thorough as would be required by a large business house. Requires no more time than any ordinary cash account.

The book is arranged to contain the complete records of expenditures and receipts for 12 months (beginning with any month) with Recapitulation, Inventory and Balance Sheets to close up the year's business.

Contains 82 pages, 7 3/4 x 10 inches, neatly printed in blank form on best quality linen ledger paper, regular blank book ruling, and is bound in a neat, durable binding.

Send for copy of this valuable book and begin to keep your accounts in a systematic, orderly manner—the correct way. Whether you keep poultry for pleasure or for profit this book will help you to conduct your business on a more intelligent basis. You'll be pleased with it. Price 50 cents, postage prepaid.

The above book and **AMERICAN POULTRY JOURNAL** one year, both for 75 cents.

Fill out blank below and mail to

Money in South Dakota

For several years South Dakota has led all other states of the Union in the production of the greatest wealth per capita. In other words South Dakota is long on wealth but short on people. That surely ought to be a good place to go if you want to get a good start on the Highway to Independence.

The best service to South Dakota is offered by the

CHICAGO, MILWAUKEE & ST. PAUL RAILWAY

A trustworthy account of South Dakota, its crops and its opportunities, will be sent to anyone interested for two cents' postage.

Low round-trip rates to all points in South Dakota, on the first and third Tuesdays of each month, give an excellent chance to inspect the openings there.

Incubator Book

The Best That Was Ever Written.

If you will write us to-day we will send you the best book ever written on incubators.

It is interesting, fascinating, written by a man who knows, by a man who has spent 23 years on the problem. It tells all he has learned, all the results of hundreds of experiments with every kind of incubator made. It is a book you should read before buying, If you wish to avoid a costly mistake. The writer has spent 23 years in perfecting Racine Incubators and Brooders. The book tells all about them—that is why we send it free. It will lead you to choose the Racine. But it will give you the knowledge you need, and it is fair. It tells you practical facts that no other book ever told. Don't buy without reading it. Write to-day.

Racine Hatcher Co., Box 26, Racine, Wis.

We have Warehouses at Buffalo, Kansas City, and St. Paul.

**We Pay
The Freight**

YOU CAN RELY ON THE OLD TRUSTY INCUBATORS

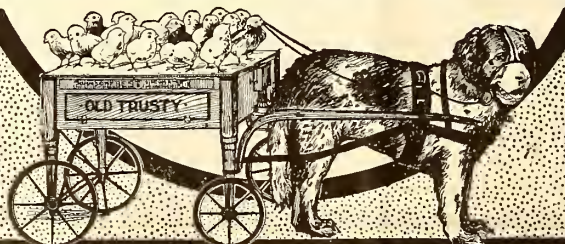

They embody incubating principles that only come from a thorough knowledge of chicken raising. Incubator Johnson is not an old man, but he's old in the poultry business.

The experience he got making 50,000 other incubators is in his pay-for-itself hatcher. It's Johnson's own principle. Johnson's style of material. Redwood and cold rolled sheet copper, a genuine safety lamp, the best automatic, direct acting regulator on earth.

Forty Days Free Trial, With 5 Years Guarantee.

You are not asked to pay twice what an incubator is worth, either. **Old Trusty** got into the first rank the first year, and Johnson put his own prices on it—reasonable prices. You'll see the kind of cut he made when you read his catalog. Send for this catalog. Johnson wrote it. It is his Advice Book. A big book, and free, filled with information you can't get along without in the poultry business. Johnson gladly answers personal questions with a personal letter.

M. M. JOHNSON COMPANY, CLAY CENTER, NEBRASKA.

BIG SUCCESS WITH HOGS.

SOME farmers are more successful with hogs than
others. The man that only gets 8 lbs of pork out of
a bushel of corn fed to hogs makes only half as much
as the man that gets 17 lbs.

The American Swineherd is a specialist and
the best authority on the hog industry.

Prof. Henry says that success is only obtained by
concentrating all efforts upon one line.

A two-years' course in Hog Raising:

Teaching how to be successful.

How to secure the greatest profits.

How to get 17 lbs. of pork out of a bushel of corn and
19 lbs. from a bushel of wheat-fed hogs.

How to feed to double the growth and gain over usual
methods; only healthy hogs profitable.

How to keep your hogs healthy.

How to utilize, without other expense than the sub-
scription to this paper, the costly experience and gather-
ed wisdom of the most capable and successful feeders.

Prof. Kennedy of the Iowa Agricultural College says
"Your paper is a leader in its line on feeding."

Every owner of hogs should take advantage of this
special offer:

Send us \$1 for two years' subscription to the Amer-
ican Swineherd and it will entitle you to a free
copy of the Hand Book on "Hog Hygiene," with trade
secrets, recipes, valuable information, etc. If the offer
is accepted in ten days we will send you in addition the
wonderfully suggestive picture in colors, "Uninvited
Guests," suitable for framing, showing the pigs partak-
ing of a meal uninvited.

This equips you for a successful hog business.

A Hatcher That is and Does

You don't need to be a poultry specialist to run a Successful Incubator.
It's the self-contained machine that runs and regulates itself, built on cor-
rect principles, works out right results. None other so purely automatic
in all its functions.

Successful Incubators and Brooders

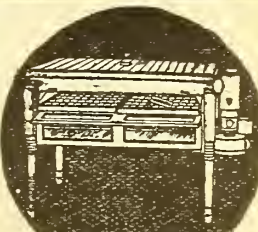

always bring results the highest and best in all men's
hands. They establish natural hatching and brooding
conditions. They take the least possible attention. Haz-
ard in poultry raising goes out when Successful's are put
to work. They are the business machines that for many
years have nobly borne their part in the great poultry
industry. 100 pens standard fowls. Incubator, poultry and

OAK BLUFF

Light Brahmas, Partridge Wyandottes

Make a grand record in winnings. At World's Fair my Brahmas won 1st, 3d cocks, 4th cockerel, 5th, 6th, 7th pullets. At Chicago, Dec., 1904, my Brahmas won 1st, 3d, cocks, 1st, 3d, 5th hens, 1st, 2d, 3d, 4th cockerels, 1st, 2d, 3d, 4th, 5th pullets, 1st pen and specials. My Partridge Wyandottes won 1st, 2d cocks, 1st, 3d, 5th cockerels, 5th hen, 2d pullet, 2d pen and specials. At Kansas State Show, Topeka, my Brahmas won 1st cock, 1st, 2d hens, 1st, 2d, 3d cockerels, 1st, 2d, 3d, 5th pullets, 1st, 2d pens. My Partridge Wyandottes won 1st 2d cocks, 1st hen, 1st, 2d, 3d cockerels, 1st 2d pullets, 1st pen. At Polo, Ill., my Brahmas won 1st cock, 1st, 2d hen, 1st, 2d, 3d cockerels, 1st 2d, 3d pullets, 1st pen and specials. Showed Brahmas at Polo, Ill., and Topeka, Kans., at same time. I can supply you with exhibition and breeding stock of either variety, grand in shape and color. Am booking orders for eggs from sixteen grand matings. All stock pedigreed. Write for my new catalogue.

OAK BLUFF, DR. N. E. MIGHELL, Marshalltown, Iowa.

Why Should a Farmer Buy ADVANCE FENCE In Preference to Any Other? Here Are the Reasons:

The Price is the Lowest. It is made so by our economical method of Marketing. The Dealer's profit on fencing is worth saving. We make the fence and sell at Manufacturers' price to the farmer direct. This saves to the farmer the profit usually made by the Jobber and the Retail dealer. Two profits saved make the price of Advance Fence the lowest known for high grade fence. Give us a chance to quote you a net delivered price on the quantity of fence you need before purchasing. That's all we ask.

We Prepay Freight on 40 rods or more. Most others quote F. O. B. Factory prices. Then you have the freight to pay, and wire fence is heavy stuff. Our prices include the freight to your station, a "laid down" price is what you want.

We Allow 30 Days Free Trial. You take the fence and set it up. Use it. Climb over it. Let the stock at it. Give it any trial to test its strength. Do this thirty days. Then if it is not up to your expectations in any particular send it back and your money will be refunded. We pay the freight back, too. Is this not the fairest and most liberal offer on fence you ever saw?

The Quality of Advance Fence is Highest. We use only the best quality of galvanized steel wire. The fence is woven under careful supervision on the most improved fence machinery in existence. The top and bottom selvage of Advance fence are double strength. The stay wire is continuous, being twisted with the selvage from one stay to the next, and wrapped twice around each line wire as it passes across the fence. This unique method of weaving gives us a continuous or endless stay wire. We obtain twice as much strength from the wire used as fences with cut stay wires. The slight crimp at the intersection of the stay with the strand wire prevents the stay from slipping, and also provides amply for expansion and contraction.

Twenty Six Styles to Choose From. Where the dealer offers you a very limited selection to choose from we give you 26 Styles and sizes of fence for all purposes, besides 24 styles and sizes of steel frame Gates. This enables you to make a wise selection as well as a satisfactory one, and prevents your having to buy a 12 strand fence for a 10 strand job, and paying for useless wire, just because the dealer hasn't the size you want on hand.

Why Poultrymen Like Advance Garden Fencing

Our 18 strand garden fencing is in high favor with Poultrymen because it is not only woven closely enough to turn poultry, but it is strong enough to turn all common farm stock. It lasts many times as long as ordinary poultry netting. It is just the thing for gardens, orchards, lawns and barn lots.

Our Free Fence Book is better than any Store you can visit to get just the fence you want. It is a Silent salesman, and one who tries to save you money instead of trying to sell you what you don't need. Get this book, look it over by your fire-side at your leisure. Decide on which fields you will fence this season, and which size fence will fill the bill. With the book will come to you Laid Down Prices—including cost of fence and all freight charges to your station.

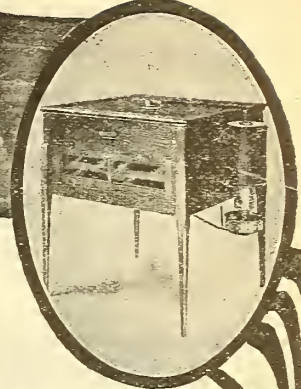

Write for the Free Fence Book and wholesale delivered prices, today.

ADVANCE FENCE CO., 1357 Old Street, Peoria, Ill.

If You Want a FENCE

That is made from the best High Carbon Steel Wire.
That is Heavily Galvanized to prevent rust or corrosion,
That is COILED to provide for contraction and expansion,
That is Strong Enough to turn the most vicious animal,
That is Woven Closely to turn chickens and small pigs,
That staples to the posts as you would nail a board,
That easily adjusts itself to all uneven surfaces,
That is woven in such a manner that compels every wire
to hear its portion of strain,
That you can Buy Direct from the firm that makes it, with
Freight Prepaid to your nearest railroad station,
That you can examine at your railroad station and re-
turn it if it displeases you in any particular,
That you can erect and Use for Thirty Days, and if unsat-
isfactory return at our expense and get your money,

MODEL Incubators and Brooders

The Machines That Are Supplanting Other Makes on the Large Utility Farms

Making a Front by extravagant and false claims and *Making Good* are two very different things. The Model *Makes Good* on every point claimed for it.

The chief claims made for the Model Incubator are a perfect ventilating system, and a regulating device many times more active and accurate than any other on the market. These two features, together with minor ones that go to make up a harmonious whole, render the Model Incubator the most efficient hatching device of those now offered the public.

New Thermostat for 1905

Patent applied for.

There can be no stronger evidence in support of my claim for the superiority of the Model over all others than is in the fact of its adoption by the market poultrymen, whose profits are regulated by the percentage of eggs hatched, and who are using it exclusively, replacing other makes at great expense.

Is not the incubator that is actually doing this "Making Good?"

One of the large farms changing over this month is that of Messrs. W. H. & John C. McCormick, Yardley, Penn. Here sixty-seven Cyphers incubators will be replaced with Models.

Mr. William H. Truslow purchased six large Models last season. Now he is replacing his forty-five Cyphers Incubators with the Model Special Duck No. 4.

The Crystal Springs Duck Farm operated twenty-six Models last year. This season fifty-five old Cyphers are being replaced with Models.

The Pine Tree Chicken Hatchery is now changing to use the Model exclusively. More than twice as many chicks are hatched on this farm every year as on any other two farms in this country where the largest in the world are to be found. Mr. Wilson tells his own story as follows:—

PINE TREE CHICKEN HATCHERY

Barred Plymouth Rocks
Buff Plymouth Rocks

Single Comb White Leghorns
White Wyandottes

NEWLY HATCHED CHICKS FOR SALE FROM ABOVE BREEDS

Mr. Chas. A. Cyphers, Buffalo, N. Y.

Stockton, N. J., Jan. 5th, 1905.

Dear Sir:—I now enclose you my check for twenty-five more of the new 360 Egg Model Incubators. This lot will make me altogether seventy-two machines. I shall discard the forty-seven old Cyphers as I find that the Model requires less oil to run it than the old Cyphers does, the thermostat is more sensitive, and therefore I can get more and stronger chicks. I have followed hatching as a business for the last eighteen years, have used many different makes. Am using some of my own make now, but find that your machines do better work with less watching than any I have ever operated. It does not take much of a mathematician to figure out that the best incubators and brooders are cheapest in the end. I am well aware that there are a great many makes of incubators that are widely advertised, and big inducements given to buy. If those who are inexperienced and intending to buy a machine would note that the Cyphers Incubators have been used by most of the largest poultry plants and experiment stations, and that the Model is now rapidly supplanting the Cyphers in these large plants, and that Chas. A. Cyphers is the inventor of both these machines, they would take the advice of those that have tested them and profit by their experience, rather than listen to some incubator manufacturer who sends out a glaring claim that his machine will give a 99 per cent hatch, or something similar. With best wishes that your business will continue to increase, I remain,

Yours respectfully,

JOS. D. WILSON.

Don't keep it if it don't suit in every respect. Sold on

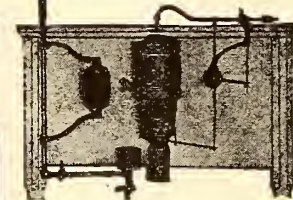

30 DAYS' TRIAL

Box 2

Brooders all sizes and kinds, from \$3.00 up. **SPRINGFIELD, OHIO.**

Will Your Incubator Do This?

Will your incubator hatch a setting of eggs with one-half the oil you now use? Will your wick burn 21 days without trimming? Will your regulator control the flame, raise or lower it as required? Will your burner burn without charring wick, overheating, causing liability to fire? Will your machine save half the time, half the labor, half the cost of operation? Put on this outfit and it will do even more. It will make your old machine do better than it ever could do, besides save you many dollars and much annoyance. Its combined damper and flame regulation alone **saves half the oil**. Its burner saves danger from fire—**can't overheat**. Its wick saves trimming—**never needs it**. Its regulator controls both flame and damper (see cut); this avoids too high or too low a flame.

saves seventy-five per cent. of gas.

FROM BIG TREES

TO PETALUMA INCUBATORS

California Redwood

has been used for twenty-four years in the manufacture of

PETALUMA

Incubators and Brooders

(Awarded Gold Medal at St. Louis Exposition, 1904)

because we have found it superior to all other kinds. Several other incubator makers are giving their testimony to our good judgment by advertising to also use California Redwood. It is not only true that Petaluma Incubators and Brooders are made of the best lumber in the world, but every other article used in their construction is of the highest grade, and therefore these "Standard of the World" Incubators and Brooders occupy the same relative position to all other Incubators and Brooders that the mighty California Redwoods do to other trees.

Read "A Bit of Incubator History," in our new catalogue. We send it free. Address nearest office.

Box 150, Indianapolis, Ind.

Something to Think About Before You Buy an Incubator

It is a fact that a large percentage of persons who buy incubators are **not** satisfied with their purchase. Because a large percentage of the incubators sold do **not** do satisfactory work. They do **not** work satisfactorily because they are built purely on theoretical lines—nine times out of ten the manufacturer who makes them hardly knows a hen from a goose. How can you expect a purely theoretical workman to build a practical machine? Now, I do not claim to be the only man in the business who knows anything about incubation, but I do claim that in the past 20 years I have experimented with more machines and hatched more chicks on my **Millhook Poultry Farm** than any other manufacturer, and so have gained a wide range of hatching experience. As a result of my experience I found this: **I had to build an incubator myself, after my own plans, in order to get one that would give satisfactory results.** I have that sort of a machine in my line of

IDEAL

Incubators and Brooders.

These are now in the hands of thousands of poultry raisers the world over, and are giving better satisfaction, producing better results, costing less money to operate and causing less trouble than any other incubator or brooder ever built. The simple explanation is that

(1)—They are built on a better plan. (2)—They are more carefully built and more rigidly inspected. (3)—They are **built by a man who knows** from 20 years experience on the largest pure-bred poultry farm in the world, exactly what is needed to produce vigorous, healthy chicks at the least expense.

I do not want to criticise the methods of other manufacturers, nor to belittle their machines, but I do say that every reader of the **Reliable Poultry Journal** will find it to his advantage to send to-day for our great book, "Poultry for Profit," and to investigate

OUR FREE TRIAL OFFER.

We will ship you an Ideal Incubator or Brooder, any size, on 30 days free trial. If you do not find it entirely satisfactory in every way, return it at our expense.

We Pay All Freight Charges

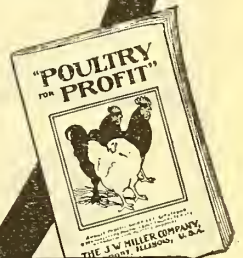

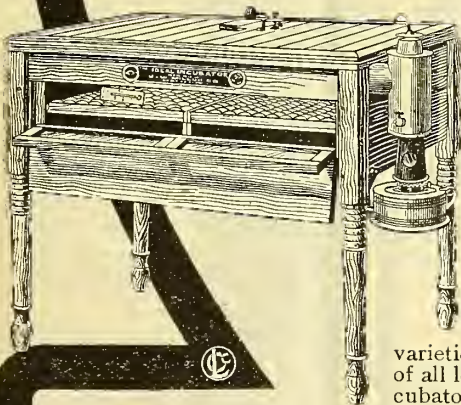

If we did not believe the Ideal to be the most practical and most satisfactory incubator ever built, we could not make this offer.

Send For This Free Book.

Catalogue

**WE HAVE A QUICK
DELIVERY PLAN.**

FOR fifteen years manufacturers of incubators have been trying their best to beat the "Hawkeye," but so broad and basic are the exclusive patents on which its superiority rests, that they haven't yet built an incubator that will equal, much less excel it, and in our opinion they never can. We have always kept in the lead in the matter of improvements. Our "Hawkeye Special," which we show in the accompanying illustration, has every improvement and every device that adds value to an incubator, and it gives better results than any other make of incubator on the market at any price. Here's our advertising introductory offer—the best proposition on a high grade incubator that any reliable company has ever made. We will ship you on

30 DAYS FREE TRIAL
The "Hawkeye" Special Incubator

of 100-egg capacity—on the results of the trial we cheerfully rest our case. We do this because we want you to see and know that the special features we claim for the Hawkeye are genuine points of superiority. Here are some of the unique and valuable features of the Hawkeye—the foster mother of millions of healthy chicks: Simplicity of design—substantial construction, of the very best materials. Finished like a piece of fine furniture. Ventilation system that solves the all-important questions of moisture and evaporation. Hot water pipe 12-oz. cold-rolled copper heating system that maintains an even temperature—no cold corners. Automatic Regulator, of absolute accuracy. The Hawkeye Special Safety Lamp, Heat Deflector, Thermometer, and other devices give the finishing touches of perfection to this splendid incubator.

215 Chicks from 215 Eggs.

Hawkeye Incubator Company.

Gentlemen:—Enclose fifty cents, for which send me one incubator thermometer, and if this is not enough I will send the rest as soon as I hear from you. In my last hatch from the 240 egg Hawkeye I took off 215 chicks from 215 eggs. Wasn't that good? Send the thermometer at once and oblige.

Yours respectfully,
MRS. D. C. JOHNSON, Maxwell, Ia. July 1, 1904.

Hawkeye Incubator Company.

Gentlemen:—You will probably remember that I purchased a 50-egg incubator of you last April. I find the machine is shelling out the chicks so fast that I must have a brooder, so quote me the best price for a machine to correspond in size. I had three hatches in the incubator, which were as follows: First, 50 eggs, 46 chicks; second, 51 eggs, 47 chicks; third, 50 eggs, 49 chicks. Yours very truly,

ALVA HARDY, Blandinsville, Ill., Oct. 24, 1904.

Are You Open to Conviction? Then let us send you the Hawkeye Special, the pride of our establishment, together with our Complete Hawkeye Instruction Book, telling how to operate the machine and giving invaluable information on how to make money in the poultry business. The Hawkeye Special will please you. A trial hatch will show you it's a profit-maker. Puts money in your pocket every day you keep it busy. Write for 30-day free trial plan—will you?

HAWKEYE INCUBATOR CO., Box 2, NEWTON, IOWA.

Don't Buy an Incubator**Get a New Thought Hatching Machine**

and take off a batch every 10-14 days. No, it's not an incubator. It hatches and the CHICKENS LIVE. It is all metal—good as gold to people who want a business machine. Catalogue A ready. Get it.

HASTINGS MFG. CO.,**Hastings, Neb.**

**LET
TEN HENS
COMPETE
WITH
ONE**

OHIO INCUBATOR

PUT 12 eggs under each hen—put 120 eggs into the Ohio. Keep strict account of the feed for hens and the oil for the incubator lamp. Make a record of the time it takes to attend to the hens and to operate the incubator. At the end of three weeks you'll find it cost twice as much to feed the hens as the oil cost in the incubator lamp! You'll agree that it took twice as much time and four times the worry and annoyance to attend to the hens than it did the incubator. Perhaps your hens will hatch 60 lousy chicks while your incubator will contain 109 to 119 strong, sturdy, healthy chicks—clean, sweet, and free from vermin. Let those ten hens do the laying, while the Ohio Incubator hatches chicks at a profit. Send for free catalog and learn how it does it.

OHIO INCUBATOR COMPANY, BOX 12, COLUMBUS, OHIO

SILVER WYANDOTTES

SPECIAL

On account of my other business taking all my time, I have decided to sell my entire stock of Silvers, 125 head including all my prize winners at Cleveland, Columbus and St. Louis. I have some of the grandest laced females I ever saw, clear black and white. My males are wonderfully free from straw color and are fine in lacing and shape. Will sell for half price as long as they last. Satisfaction guaranteed.

H. G. FISH R. F. D. 2, Columbia Sta., O.

LANIER'S BARRED ROCKS

are better than ever. Harry M. Lamou's and E. B. Thompson's strains direct. America's best. I have three of the grandest pens for cockerel mating that I have ever owned. Fine exhibition cockerels a specialty. Each yard is headed by a fine exhibition specimen fit to show at any large show. Eggs from these yards will produce winners at next winter's shows. Mark it. Orders booked now for spring delivery. I am offering eggs this season from superior stock purchased at great cost. Eggs \$3 per 13, \$5 per 26. Write me. Satisfaction guaranteed or money refunded. My 1905 circular containing real photographs of my birds will be ready for mailing Jan. 20, its free if you mention this paper.

WINCHESTER POULTRY YARDS, GEO. B. NELSON JR., Mgr., Winchester, Ky.

BAIR'S BARRED ROCKS

are daily proving their claim of being LEADERS FOR EXHIBITION AND UTILITY. Since 1901 they have won in my own and customers' hands 316 regular premiums. In my hands they won on every bird entered at Pan American Exposition, Missouri and Kansas State Shows and at the big Kansas City Shows, and finally in the great World's Fair Show. In Missouri's awards I won on every bird entered, winning 9 regular premiums, 1st and 2d cock, 3d and 4th hen, 4th and 5th cockerel, 4th and 5th pullet and 2d pen. In my yards the 300-egg hen is a reality. Lady Pan, the greatest living hen, has a record of 247 eggs for year 1903 and 11 blue ribbons won in the largest shows of the country. I have for sale fine cockerels from Lady Pan pullet line, and extra fine cockerel breeding pullets. In exhibition birds I can fit you for any show. Let me know your wants.

EDGE-DROP

SEED CORN

"Edge drop" planters are no good unless the seed is of even size and perfect shape. I breed corn with perfect and uniform kernels and I grade all my shelled seed with a specially constructed mill that throws out every uneven, round or thick kernel better than you could possibly do it by hand. Every kernel must be just like every other—even, flat, just right. That means even, accurate planting and a perfect stand. No trouble, no delay. All my shelled seed is screened this way, a feature no other seed man can offer. Samples and catalog free. Henry Field, Seedsman, Box 48, Shenandoah, Iowa

"The ear seed corn man."

HOW TO HEAT BROODING HOUSES

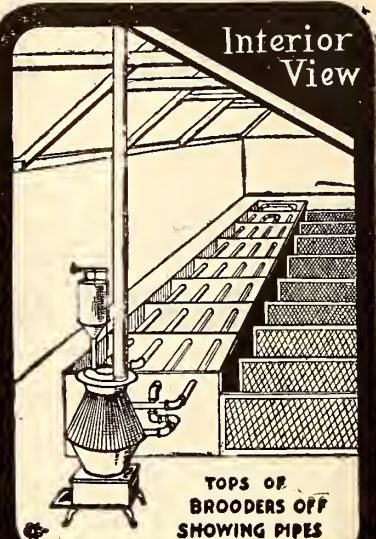

When hundreds of chicks need the protection of a brooding house, don't rely on make-shifts. Install a system that regulates itself and keeps the temperature just where you want it. There's no trouble or anxiety when the

RELIABLE HOT WATER SYSTEM

stands guard over the chicks. It can be set to give any degree of heat wanted. Perfectly safe. Can't possibly explode. Any man can set it up with a plumber's wrench. Our directions are plain. We send diagram, with parts all marked. Our new complete catalogue gives valuable hints on everything used by poultrymen. It's free. Send 10 cents to pay postage.

Reliable Incubator & Brooder Co.

Box A-1 Quincy, Ill.

Here's the Answer

The Gem Incubator is a thoroughly reliable hatching machine. It is constructed in the most approved, substantial manner. It embodies features that make it the easiest and simplest machine to operate on the market. Thousands sold, and every purchaser has only words of praise for the Gem. Our catalogue is full of answers to every question. But the feature we like to emphasize most and that puts the

GEM INCUBATOR

in a class by itself and above all others is the **Removable Chick Tray and Nursery**, which can be entirely removed from the machine for transferring chicks to brooders, and enables you thoroughly to dust machine without getting on your knees and reaching at arm's length back into the egg-chamber to do it.

No other incubator has this handy feature. When you fully appreciate the advantages of this one improvement it will be "reason enough" why you should buy the Gem Incubator. Write for **FREE** catalog and learn all about the removable chick tray and nursery before placing your order.

I WANT YOU....

To know that I am in the market with my chickens for the season of 1905, and have the best stock I ever handled. My birds have taken over fifty first and second premiums this season—at the Denver Poultry Show, the Nebraska State Show and the Kearney County Fair, and I also captured four premiums out of six entries at the St. Louis Exposition. I have been 15 years in the chicken business and I believe I know what good fowls ought to be, and am prepared to offer you **ROSE COMB BROWN LEGHORNS, BARRED PLYMOUTH ROCKS and BUFF ORPINGTONS** that cannot be beaten by any of the breeders of this kind of chickens. If you want birds or eggs write for further information and prices.

JAS. H. TROUGH, Pleasant Hill Poultry Farm, Minden, Neb.

SAVE MONEY

...ON YOUR SUBSCRIPTIONS...

Instead of paying full price, take up one of our offers. You can take more papers in this way. All papers are for a year. Send at once.

Papers can be sent to different Addresses if desired.

Every fancier needs more than one poultry paper in the successful conduct of his business, thereby securing the wide range of valuable information on all phases of successful poultry raising. There are over 70 poultry papers in the United States. AMERICAN POULTRY JOURNAL, which enjoys the prominence of being the pioneer paper of not only the United States, but the world, has been enabled to make special clubbing prices with some of these journals and we give our subscribers the benefit of same.

We have also made a careful selection of all the best poultry books published. In the list below we have combined AMERICAN POULTRY JOURNAL with only one of these publications or books with special price for same. Should any one desire to take more than one poultry paper or book in connection with AMERICAN POULTRY JOURNAL, they can find out the clubbing price by adding the regular price of all the books and journals they wish to take together and deducting 25 per cent. For instance, should you wish AMERICAN POULTRY JOURNAL at 50 cents, one other journal at 50 cents and one book at 50 cents, the clubbing price would be \$1.12. These clubbing offers are for old subscribers as well as new.

All orders received at this office will have prompt attention and we in turn will send the orders to different papers, thus saving you the annoyance of writing a number of letters and also saving you money through the reduced rate we can make you by sending in your order for all the poultry papers or books you wish to us.

Orders will be taken for the new Standard of Perfection, published by the American Poultry Association, and which will be ready for delivery March, 1905. This is a book of nearly 300 pages and will contain over eighty black and white illustrations of ideal specimens of male and female of every Standard variety.

DUCKS and Dollars

The easy dollars that duck-raisers make are the extra dollars that the right kinds of food make for them. Intelligent duck feeding is immensely profitable. The foods presented below are the best known for ducks and all kinds of fowls.

HARVEY'S Mixed Grains

is a combination of cereals in proper proportions and is the result of extensive experimenting. Has been on the market several years and has become very popular among poultry-raisers—furnishes the variety of ration that fowls need; makes healthy, hardy stock—an all-the-year feed at a price cheaper than you can buy the grains and mix them yourself.

CUT ALFALFA HAY

is considered an absolute winter necessity for laying hens. Keeps the egg production up, and will make money for you at the time when egg money amounts to something—when eggs are at top notch. Young pullets begin laying several weeks earlier when regularly fed Cut Alfalfa Hay. Old layers do better work and do it easier on such a feed.

HARVEY'S Electric Poultry Food

works like magic—fine for morning mash; builds bone and muscle, and keeps young stock growing. As an egg-increasing feed it's a sure money-maker. A little experimenting with Cut Alfalfa Hay, Harvey's Mixed Grains and Harvey's Electric Poultry Food in combination will convince you that you need to go no further in the search for the best there is. Free illustrated catalog of an extensive line of foods, grits, supplies, etc., sent on request. Let us send you one.

**INCUBATORS BEATEN**

Better hatches. Stronger chicks. Much less expense. No failures. The Perfect Hatching System is Safe, Sure and very Easily Managed. Interesting book free.

LAPHAMS BUFF PLYMOUTH ROCKS

—THE GOLD MEDAL STRAIN—

has again made a clean sweep in the show room. My winnings are as follows: Michigan state fair, 12 to 16, 1904, I won four 1sts and five 2ds. Illinois state fair, three 1sts, two 2ds, two 3ds and at World's Fair I won 5th and 9th pens, and at Dearborn, Mich., Dec. 12 to 16, 1904, I won five 1sts, four 2ds, five 3ds, three 4ths; and at Durand, Mich., Dec. 8 to 10, 1904, I won three 2ds on an entry of five birds. Watch for my show record at Detroit and Chicago.

Having just bought the entire stock of Buff Plymouth Rocks of R. G. Collin, Mt. Pleasant, Mich., I am now in a position to give my customers as fine stock as ever grew. I have over 600 birds and can fill all orders from a good breeder to a fine show bird, and if you want Buff Plymouth Rocks as yellow as gold, Remember the name.

..LAPHAM'S GOLD MEDAL STRAIN..

I now have at my yards the following World's Fair winners: 4th and 5th cock, 7th cockerel, 5th and 9th pens, which will assure my customers eggs in season from some of the finest birds in America. Show birds a specialty. Catalogue free. Please mention this paper.

Knightsville,

Cranston, R. I.

LET'S SIT DOWN AND TALK IT OVER

Are you going to buy an Incubator? You want the best for the lowest cost. I want you to know about our

New Idea Incubators and Brooders

If I could sit down with you, take one of our machines apart and show it to you, piece by piece, I would have no trouble in interesting you. No machine on the market deserves your confidence more than the New Idea. THEN when I told you that you could get it for less than ONE-HALF THE COST of other machines and showed you just how this saving is made I would be sure of your order.

This is the spirit in which we have written Our New Book, "How to Make and Save Money with Incubators and Brooders." It is a face-to-face talk on the subject because we cannot in any other way meet and talk to the thousands who want to know about the New Idea. BUILD YOUR OWN INCUBATOR; that's the secret of saving half, and you can do it just as successfully as thousands of other men, boys and women have done since we first began telling how it could be done. Read what this man says:

Channon, Snow & Co., Quincy, Ill.—Dear Sirs: I told you I would report my success with your incubator and brooder. I never thought they could be built so cheap. I have 174 White Leghorn chickens from 180 fertile eggs and they are all doing well. I have had quite a few friends watching the results of your machine, and I have now five incubators and brooders sold for next season. F. GEO. FARLINGER, Detroit, Mich.

The Book Tells about the Plans for Building Incubators and Brooders so clear and simple and complete that you can't possibly go astray. Besides we furnish you the parts you cannot make like Tank, Heater, Lamp, Regulator, etc. and we guarantee that no factory-made Machines have better fixtures than yours. Everything we furnish is of the very best. You need a brooder too. Our method enables you to get an Incubator and Brooder at less cost than a factory-made Incubator alone. Other features of interest in the book: "Why factory-made Incubators are Expensive," "How to Get Your Incubators Free," "Give the Boy a Chance," "Full Instructions for running Incubators and Brooders," etc. It's full of facts helpful to the experienced and invaluable to the beginner. Get the Book! Write for a copy today and begin planning carefully. Start right! Saving on the cost of your Incubator and Brooder is the best kind of money-making. A postal will bring the Book. It's free. Contains more genuinely New Ideas than any Incubator catalogue of the year.

Build It Yourself

Of course you can build your own Incubator and it will hatch just as perfectly as any factory-made machine on the market, and besides you

SAVE HALF THE COST

This means two machines for the cost of one; or an incubator and brooder, (for you need a brooder too), both for less than the cost of an ordinary machine alone.

How to Do It: Write to-day for a free copy of Our New Book

"How to Make and Save Money With Incubators and Brooders"

It not only explains how you can build Incubators and Brooders, but it gives full directions for operating them. The instructions are very simple and easy to follow but they are complete

The New Idea Incubator (so called because the *Idea* of building it yourself is new) is built from plans which we furnish you. Every piece is laid out and complete specifications are included. The only tools you need are a saw and hammer. Hundreds of men, boys and women have built New Idea Incubators from our plans and are making money running them. Beside the plans we sell you at wholesale prices the parts, like Tank, Lamp, Regulator, Legs, Doors, Trays, etc. The plans show just how everything goes together. You can't misunderstand them. Remember, in this way you get a complete machine at less than half price. No machines do better work. Read this:

Channon, Snow & Co. Dear Sirs:—The plans and fixtures you sent me are all you claim for them. I have my machine made and it cost me less than \$8.00, and just as good as \$25 and \$30 machines you buy ready made, and anybody can build one. I call mine "Excelsior," for it beats them all.

P. C. HALEY, Tiro, Ohio.

Get the Book! Write for it to-day. Read all about the plans and what others say. See photographs of both Incubators and Brooders built from our plans. We can't begin to give here all the reasons why this is the best way. The book will help you whether you build machines or not. The only cost is a postal card and it may save you many dollars. Address,

Channon, Snow & Co., Dept. C Quincy, Ill.

THE CENTRE OF POULTRY CULTURE

Fred L. Kimmey's Visit to the Columbia School of Poultry Culture.

Mr. Kimmey Tells in His Own Way What he Saw and Learned at this Great Educational and Industrial Centre of Poultry Culture.

"You will remember, Mr. Bates, that some little time ago, as I was about to start on a visit to the State of New York, you requested me if my trip took me near Waterville, the home of The Columbia School of Poultry Culture and The White Leghorn Poultry Yards Co. to look them over and give the readers of The American Poultry Journal a brief description of the impression I might receive. I have been there. The management, teachers, lecturer, clerks and workmen very willingly threw everything open to me. I had but to suggest a line of examination to have it cheerfully shown to me. I find it difficult to express the pleasure I experienced. If those who have business relations with either the farm or school derive from them but a part of the enjoyment which came to me, they surely will not regret them. That your readers may obtain the most profit and pleasure from the recital, will you kindly suggest something in the way in which you think I should tell the story?"

"I can make no suggestions, Mr. Kimmey. The things which interested you will be interesting to others. Tell them in your own way."

* * *

It seemed very early that cold, snowy, frosty December morning in Utica, as I commenced the railway ride of twenty-one miles to Waterville. Gazing out upon the snow-covered hill and dale, the trees spangled with frost diamonds, the green pines bending beneath loads of purest snow, seeming to be bursting forth into white blossoms, as we sped along, the warmth of the car diffused a sense of exquisite comfort. What a fuss our locomotive made! What blowing off steam, enveloping all in a cloud of white vapor, just to whirl along the few of us that short distance! Oh, if the ride could only last until the mid-day dinner time! At the end of the too short ride I must find a poultry plant, and a school. Would I find the institution two or five miles out in the country? Was there a livery stable near the depot? I had been in little towns where I could get no conveyance but that of a farmer, who was having his horses shod at the blacksmith shop. He charged me \$1.03 to take me in his farm wagon out and back ten miles. I willingly paid the \$1, but the 3 cents I thought robbery. I didn't have the change. Mental visions of having such experiences repeated presented themselves to me. Then, too, I was not easy in my conscience. I had seen many of the things they call "poultry plants," and had read the "write-ups" given in the papers about them. I called to mind how Mr. Brown had his plant written up and had a picture of my little chicken house to illustrate his "extensive buildings." In reality the chicken house could be placed in an 8x10 dining room, but in the finished illustration it looked like a combination of the Louisiana Purchase Exposition, Madison Square Garden, Mechanics' Hall and the Chicago Coliseum. I don't know how the artist did it, but it was like the original. Cameras won't lie. But in the description there was no such handicap. Was it expected I should do thus? I had been promised my expenses paid. Would they be refused me if I told the truth? George Washington couldn't lie. I can,

but I don't like to. Someone has said "Honesty is the best policy and we know because we have tried both kinds." Yes, I'll follow the maxim in this, my first experience, if I lose the 42 cents it has cost me for car fare.

* * *

As I stepped from the train I saw a commodious, well-built, clean and handsome depot. Though still snowing, the platform has just been swept. The sidewalks leading up to it from four directions recently cleaned. Horses and sleighs with jingling bells were in the streets. I stepped up to a man standing near and asked: "Can you direct me to the home of Mr. Brainard?" "Yes, sir," he replied; "he just went by here: there comes his son now. Hello, John! Here is a gentleman who wishes to see your father." John came up on a run, seized my baggage, saying: "We'll go right down to the house." I said: "I wish to see the Mr. Brainard who is connected with or has something to do with the Columbia School of Poultry Culture and the White Leghorn Poultry Yards Co. This gentleman tells me Mr. Brainard just went by here, and that you are his son." "Oh, no," said he; "the Mr. Brainard he saw is Mr. Brainard, the banker, and it is his son, Mr. C. G. Brainard, you wish to see, and I am not his son, I work for him. But come, it is but a short distance to his house; I am sorry to say Mr. Brainard is sick. He has had an attack of grip, but I think he is out of bed this morning for the first time and can probably see you." We walked down a beautiful street, fine residences and lovely grounds on both sides. The buildings were modern, all well painted, giving an appearance of general prosperity. Not one was in sight that could have cost less than from \$5,000 to \$7,000. Were it not that the shade trees were larger and more luxuriant growth I might have imagined I was on one of the best residence streets of any one of our large cities. "What is the population of this place?" I asked my companion. "Two thousand, I believe," was his reply. "And," I continued, "this seems like a very nice street. I usually notice that the best and handsomest places are not as near the depot in most of these small places. The poorer class usually gets near the railroads." "Oh!" he retorted, "there are no poor in this town. They are all rich." Of course, I shrugged my shoulders, and asked: "What do they do?" "Do?" he answered, "why, they are bankers, storekeepers, buy and sell hops and principally farming. They are in great luck this year. One man sold from his farm of 200 acres \$18,000 worth." "What!" I exclaimed, "\$18,000! What did he raise?" He answered: "Hops. They were a good crop and he got a big price." Then, too, we have a canning factory where they put up corn and peas. Many are getting rich from raising peas. Do you see that hill?" pointing to a towering height. "The man who owns it got \$300 an acre from it from peas. They were cut with machine, hauled to factory where a machine threshed them, sorted the Marrowfats from the Early Junes and chopped the peavines into shreds which the farmer hauled back home for ensilage." "Don't they raise any fruit?" I inquired. "I notice there are no orchards." "No," he answered. "Oh! just a few. Some men raise a small lot for their own use. The land is too valuable for orchards. Those poles which you see stacked up are hop poles." "One more question," said I, "are there any churches?" "Yes," he replied, "there are seven." I simply remarked, "I thought so, and I presume you attend them all." Although I could see all around, the seeming prosperity, I doubted the statements to which I had listened. But from talk with others I am inclined to believe they had less than the customary exaggerations. I ascertained the county was of great altitude, which made it peculiarly adapted to the crops, hops especially, which they produced.

I tarried at the home of Mr. Brainard but long enough to summon by telephone Prof. Stonebern, associate instructor of the school. I said to him: "Suppose we visit the yards first," and to the driver: "Get us there as soon as you can." As our horse and sleigh with jingling bells dashed along I noted again the beauty of the winter landscape. In not more than five minutes we turned into a gate and drew up before a building which I was told contained the offices of the school, class rooms and lecture room. I said: "Professor, it was hardly necessary to have procured a conveyance; we could easily have walked this short distance." "Yes," he replied, "it's but a pleasant walk from the center of the town, but it is a snowy morning and bad underfoot. We all walk most of the time from choice, vet the horse and sleigh is always going back and forth with someone." As we stepped out of the sleigh Prof. Stonebern asked: "Where do you wish to commence, in the school or the yards?" I replied: "Show me the yards first." A man was summoned to show me around.

* * *

It seemed to me a misnomer to call that which I saw around me "the yards." It comprised a good-sized farm, sixty acres in extent. It seemed to me a strip of land rather longer than broad, with a stream of running water on each side, which I was told was never known to go dry. It was an undulating valley, slightly sloping to each side, the whole dotted over with breeding houses, brooder houses, incubator cellars, shops, storehouses, fattening houses, packing houses, shipping offices, etc. The whole was systematically divided

houses 1, 2, 3, 4, etc., all down that side and all down that side, fattening houses over there, killing houses there. Storage hou—"Want," I said, "what do you mean by breeding houses?" He looked at me a moment slyly and seemed to be considering whether I was in earnest in asking such a foolish question, but with a smile answered: "The breeding houses are where we house and care for our breeders, the hens which lay eggs." "And are all of these breeding houses full?" I continued. "Yes," he answered, "all have many in them. They could hold more, though. We calculate to keep about 2,000 laying White Leghorns. We are also getting Wyandottes, Plymouth Rocks, Langshans, Light Brahmas and other breeds for experimental and illustrative work in connection with the school."

"Let us go through this breeding house," I suggested. "Certainly." It was a long building. "It had pens of as beautiful white birds as I ever saw." "Surely," I said, "these are extra fine; they must be your best." "Yes," he admitted, "in here are a lot we have selected as among our best. From the birds in this building we will pick our exhibition birds." I thought they were all exhibition birds. "Is there anything in that house over there, the one the farthest away with the wigwam poles to the right?" I asked. "Yes," said he, "shall we walk over to it? It is breeding house E. The things which you called wigwam poles are hop poles on the next farm. In gathering hops the vine loaded with hops, pole and all, is taken to the pickers. Afterward the bare vine is removed from the pole and the poles put up as you see them to remain until wanted for next year's growth."

Breeding house E was full to overflowing with White Leghorns, a beautiful sight. It was somewhat of a task, though a pleasant one, to go from pen to pen. Midway of the house we met a young man working with pails of feed from pen to pen. He was bright-eyed, alert and rosy-cheeked. The sort of dust-proof uniform made one think of the linen duster judges affect at a large show. I asked: "Are you one of the workmen?" "Not exactly," was his answer; "I am one of the students of the school and am taking the Working Course." "Do you think it pays you, and what do you do?" I continued. "Oh, yes," he answered, "it is great. I have charge of this house under the instructors. Get directions and instructions from them. I keep all the records and know just what is being done, as much as if it belonged to myself. I will have a chance before I get through with the incubators, brooders and fattening and killing processes." I have heard somewhere the saying: "Experience is a good teacher, but her charges for tuition are exorbitant." They seemed to be reasonable here. As we left I glanced back at the long building and imagined how beautiful breeding house E would look with its roomy yards well stocked with pure white birds.

"I have heard you have a fattening and killing, or rather dressing department; can I see it?" I requested. "Certainly. Come this way," he said, as he led me into another long building. It was full of coops. They were arranged in four tiers and two deep. Each coop contained as many grown fowls as possible without crowding. At convenient distances were open spaces in which the work was done and the cramming machines placed. I should have mentioned that the municipal water was piped through the buildings and they were lighted by electricity. In the glare of the incandescents the work was being done. The same uniformed resident students were much in evidence. I had heard much about the cramming method of fattening poultry, but this was the first time I had had an opportunity to witness the process. I silently watched for several minutes. A fowl was taken from the coop, spitted on a hollow tube through the mouth, a pressure of the foot, and back to the coop. This was repeated over and over again with the regularity of clockwork. I wondered if the fowl liked it. I doubted it. And I didn't feel bad about it. It is said "Misery loves company," and I had in mind other banquets from which I had come away feeling stuffed, and I speculated as to what comparison could be made between this victim and the banquet and that other banquet and its victim.

"Don't that hurt the birds?" I asked. The machine stopped long enough for the student operator to answer, "Oh, no! After the first two or three feeds the chickens seem to like it." "There is no accounting for tastes," I mused, but aloud: "Do they seem to be healthy under the treatment—don't many of them sicken?" He replied: "No, they do better and are healthier."

The killing house was next visited. As we entered it seemed a veritable place of execution. It was noticeable for its cleanliness, order and the simple and inexpensive appliances for performing the details of the work. "Why do you catch the blood in that vessel of ground feed?" I asked.

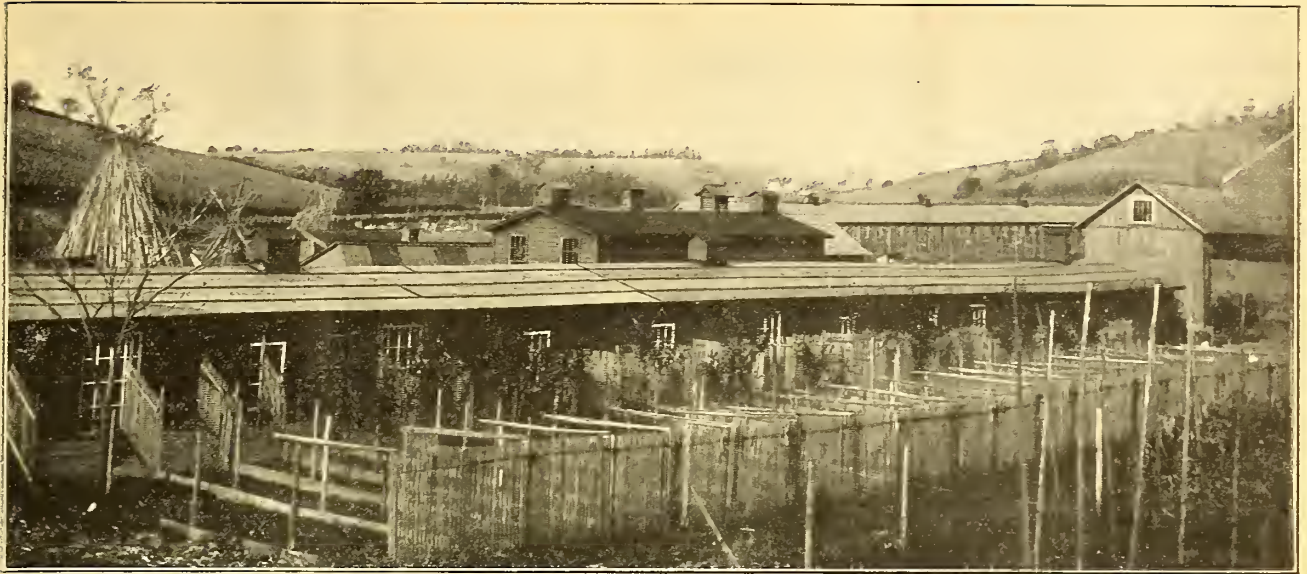

"TELL THEM IN YOUR OWN WAY."

into yards. Everything was neat, clean and orderly; buildings well painted, gates on their hinges and a general air of thrift and prosperity. Standing near the center of the farm, whichever way one looked he saw a maze of buildings, each devoted to its own peculiar and necessary use, and beyond hill and valley formed an entrancing and picturesque view not soon to be forgotten.

"What is in this little house?" I asked of my guide. "This," said he, "is a small brooder and colony house designed and built by one of the students. He has in it a brood of 4-weeks-old young chicks." "They are doing well"—they certainly looked it—"and it seems so successful I think they intend building a number of them." "And this?" said I, pointing to quite a large house near by. "That," he said, "is a brooder house. Let us look at it." He led the way. "You will see," he continued, "it is the regulation pipe system. We had great trouble with it on account of the chicks bunching up. One of our students designed and built this one section after plans prepared by himself. You will notice the shape and by this arrangement of the pipes he has secured a more equal distribution of heat. It has worked so well we are going to change the whole house. It will be quite an expense, but we figure the saving in the fuel required will pay for it the first season."

"How many houses have you on the whole place?" I inquired.

"I don't know," he answered. "We can count them." There are breeding houses A, B, C, D, E, etc., and brooding

"A MAZE OF BUILDINGS—BEYOND AN ENTRANCING AND PICTURESQUE VIEW."

"To feed to our stock; it is better than the much-vaunted blood meal or ground bone," was the answer. "And I notice you are keeping the white feathers separate from the others; why, you are keeping each color separate! Why do you do that?" said I. "Because they sell better," he replied.

* * *

At the door of the general offices of the school I was met by the busy click of the typewriting machines. Old as I am, I yielded to the temptation and paused a moment to admire the bright-eyed, rosy-cheeked operators. The good air of the place must have been good for that sort of thing. It was but a glance, however, as I was immediately enveloped—as it seemed to me—by Prof. Stoneburn and hurried into his private office.

"Let me show you," he began, pulling from his desk some papers, but I interrupted with: "Pardon me, but I wish to ask you a few questions first."

"During the time your school has been running how many pupils have you had?"

"One thousand correspondents and a goodly number of resident pupils. Our resident attendance is a new feature, and although we have had them come to us from England, Mississippi, Savannah, Ga.; Philadelphia, Pa.; Quincy, Ill., and places nearer home it has only been tried sufficiently to assure us it will be a great success."

"Have you a list of the 1,000 correspondents, with their addresses?"

"Yes; here it is," taking it from a drawer in his desk.

"You may put it back. I wished to see it if you did not have it. Now that I know you have it, I do not care to see it. Do you board your resident pupils?"

"No; we are not equipped for that. But we find them good boarding places in agreeable, pleasant places, at very reasonable prices."

"What advantages do residents have over correspondents?"

"Perhaps it is not in all cases an advantage. Some of our correspondence students do so well it seems as if none could

do better. But in answer to your question, will say our resident pupils have all the work of the course, lectures in the lecture room, class room work, embracing all that is known in poultry culture, such work as they care to do with incubators, brooders, colony houses, breeding houses, fattening, killing, marketing, scoring, judging, etc."

"Can you show me your lecture room and class room?"

"Certainly. Come with me."

Out into the main hall and up a flight of stairs took us to the rooms. There were tables, chairs, blackboards, drawing instruments, library of poultry books, drawings, charts and formulas, thermometers, moisture indicators and the articles one usually sees in a lecture room of a technical school. The work of the lecturer and the pupils littered tables and walls. It was past class hours and an offer to get one together as an exhibition of what was being done was promptly declined. There was evidence in plenty to show that good work was being done.

Back in the office again, I commenced my questioning.

"When attracted by your advertisement a prospective pupil writes you about the school, what do you do?"

"We send him a prospectus giving him all the information possible of the school and its work. We thus convey to him a clear idea of what we are equipped to do for him, and the terms upon which we engage to do it."

"If he becomes a correspondent pupil, then what?"

"We send him a lecture specially prepared, treating upon the subjects in our course of study. This course is carefully prepared to cover the entire subject of poultry culture."

"And then?"

"We require a written report from the student. We indicate the scope of this expected report. It must give the number of days and how many hours each day of work devoted to the study of the lecture, a synopsis of its contents and any ideas suggested by it. In this way we are enabled to ascertain to what extent the student has obtained the mental grasp of the subject."

"What next?"

"The report is carefully examined by the teacher of the

"WELL STOCKED WITH PURE WHITE BIRDS."

subject. His comments are sent to the pupil. They are intended to strengthen the correct ideas which the pupil has formed, to make right the erroneous ones and to suggest where none at all have been found. This is accomplished by a series of questions. The answers of the pupil are examined as was the report—comments and questions sent as before. This is continued until the teacher is satisfied the pupil has obtained a full comprehension and grasp of the subject, when is taken up the next lecture in the course."

"Your method differs, I suppose, somewhat with your resident pupils."

"No; it is very much the same. They have the same lectures, reports, etc., but it is supplemented with oral lectures and instructions. Opportunity is also given to work and see the work done on which the lectures treat. We are equipping our yards, too, with all standard breeds, that contact may be had with the student's choice."

"May I see samples of the work done by students?"

"You may."

* * *

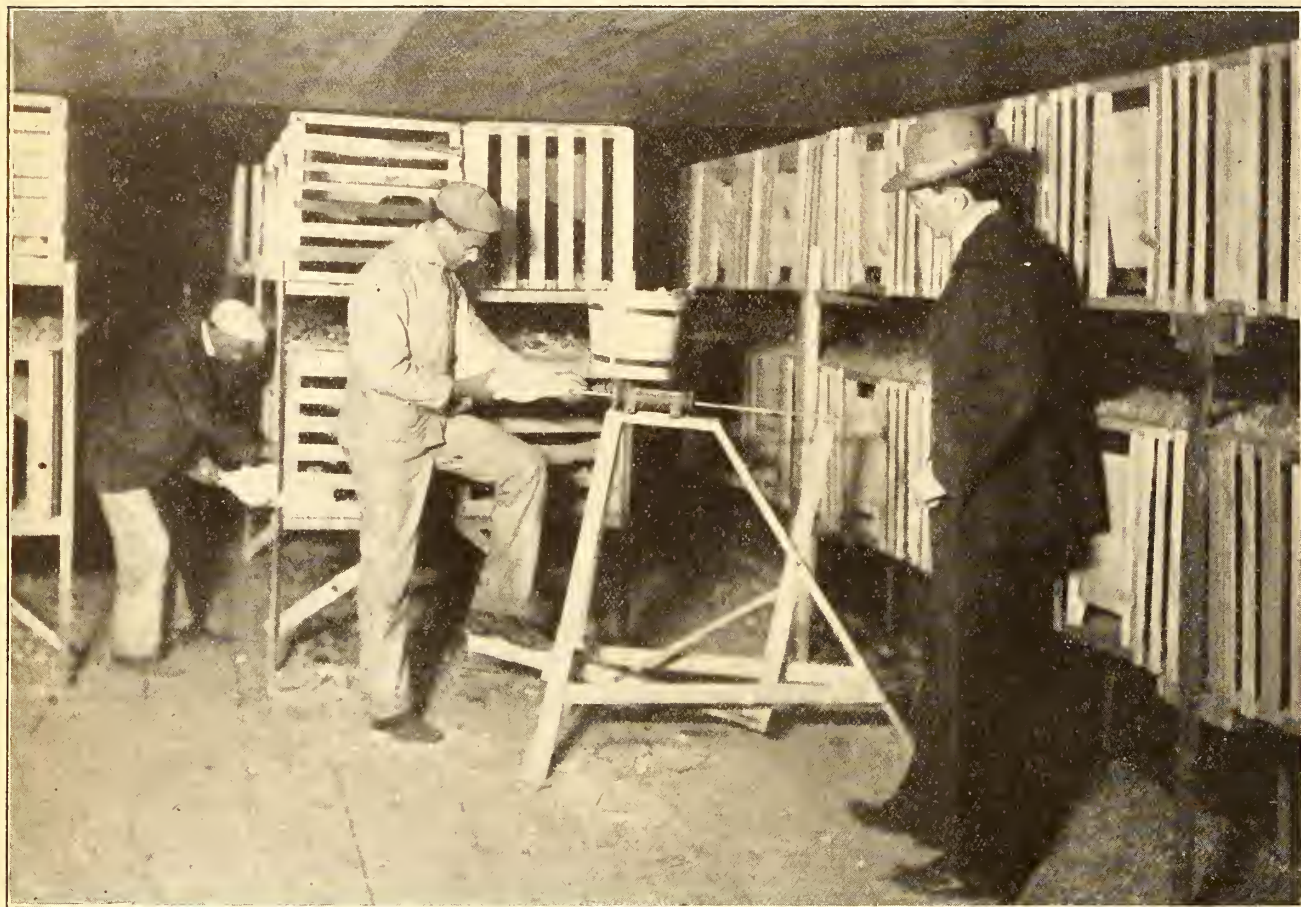

The papers handed out for examination were evidently

the same page he used the expression "god only knows," and wrote God with a little g I felt better.

I asked if they had applications from such illiterates, and if so in what manner they treated them. I was answered that they did have such correspondents. That while they did not undertake to give a complete primary, grammar and high school course, yet they did much in the way of calling attention to and correcting errors in writing, spelling, etc. An effort was constantly put forth to inculcate correct habits in everything. While the aim and object of the school was the giving of a technical knowledge of poultry culture, still it was kept in mind that there should go with this knowledge a certain familiarity with the recognized correct forms. And accordingly was supplied. To many this feature alone was of more value than the cost of the entire course.

* * *

Meantime the typewriting machines in the adjoining rooms had been busily clicking, keeping time with the swiftly moving fingers of the operators. I was allowed to inspect the work actually being done. It was the comments, instructions and questions, dictated by the expert instructors, going

"THE VICTIM AND THE BANQUET".

those of an extra good pupil and seemed to constitute the work of the entire course. Reports, comments, questions and answers were in their proper order for each subject. It was of much interest to note the increased comprehension from the first to the last reports. It was impossible to do more than make a very superficial examination of the many sets shown. To have carefully considered one would have been the work of days instead of a few hours. I believed I had been shown the best work of the best students. We all show the finest first, put the best on the outside. It is more pleasant to inspect good writing, good grammatical sentences, correctly capitalized and punctuated. Poor, slovenly work hurts business. It is unpleasant. Anyone can recall with a feeling of pity some such correspondence. There comes to mind a complaining letter I once received. The writer took exception to some of the acts of those connected with me in the enterprise. He commenced: "dere sur—mr. kimmy, you know." I think I felt a bit indignant that he should write my name with a small k, but when or

out to correspondent pupils. This inspection revealed that the interest of the school in the pupil did not cease at graduation. It is the understanding that any question will be answered or any problem taken up and discussed any time within one year. But practically there is no such limitation. The time has always been indefinitely postponed.

It was somewhat surprising to learn that the course was not being taken alone by the inexperienced and what may be termed the amateurs. Those who had had years of experience and considered themselves practical poultrymen were enrolled. Judging from their own ideas of the work they were obtaining quite as much good from it as the beginners.

Some of the correspondence, too, revealed the fact that the school was doing much in the way of obtaining permanent employment for its graduates. It does not pretend, nor is it within its circle of influence, that it shall be an intelligence office, yet as widely-known an institution must necessarily have many calls for expert help. I asked if acceptable places had been obtained for all who sought them through

their connection with the school and was answered that the demand had been greater than the supply. Several letters from those who had been benefited were shown me, but while I can remember very well that which comes within my own experience, I forget readily such things as testimonials. I can now recall but that of D. E. Hale, of Windom, Minn. Prof. Stoneburn told me quite a bit about Mr. Hale. I believe he said he did not care to have me repeat it, as Mr. Hale did not care to have his affairs and business made too much of by the public. And yet I must be mistaken, as Prof. Stoneburn knew I was there for the special purpose of finding out things and telling them, and why should he tell me things he did not want me to tell? It was a good story, anyway, and I guess I'll risk it.

Mr. Hale was a telegraph operator at a good, fair salary. He also kept poultry. I suppose he fed chickens, built coops and fought lice before breakfast, at dinner time, nights and Sundays, like the rest of us practical poultrymen. He took the course and through its training and the efforts of the school in his behalf obtained a very desirable position. He has a salary 25 per cent higher, house rent, heat and light

"It seems to be a good town," said I. "Seems to be!" he replied. "It is one of the best places in the world. A fine lot of people live there. Good and rich, too."

I mused upon the events of the day. Was it true, then, that in this prosperous community I had seen a poultry enterprise, farm and school that was fully up to representations? Of the farm I had been told it was one of several of unexampled fertility, productive and prosperous. It had been turned to the uses of poultry because an exact itemized account of expense and income demonstrated that poultry was more profitable than any grains, fruits, cattle, dairy, horses or other uses to which the land could be put. Ten thousand chicks was the annual output. Two thousand hens were kept. One-half ton per week of fancy dressed fowls. All meat and eggs marketed at the highest fancy prices. It could well be believed that it was the truth when it was claimed a profit of 25 per cent on an investment of \$20,000 was obtained. Where so good a place for a school as in the midst of such a plant? Surely it could have a happy combination of theory and practice.

As we pulled into the Utica depot I was forced to admit

"A PLACE OF EXECUTION."

for family and 10 per cent of the profit of the plant of which he is the expert manager. He has become a writer and professional poultry judge.

The darkness was gathering as I hurried to the return train. As it sped along it seemed a long time since I passed over the same route in the early morning light. The day had been so full of busy investigation. Yet the time had passed quickly and pleasantly. "Why do they call this town back here 'Waterville'?" I asked the railway conductor as he took up my ticket. "I don't know," he answered, "but I guess it is because no water will stay there." "There seemed to be plenty," I remarked. "I do not mean there is not a plenty of water," he explained. "Springs and brooks there are in plenty but when a drop of water falls it has nothing to do but take one of two courses. By one it goes down the Mohawk and on into New York harbor. By the other, by the way of the Susquehanna to Chesapeake Bay. And it may go either way, as the place is on the highest point of the watershed between the two valleys."

I had seen a poultry farm as great as any of its pictured or word descriptions, and a school equal to the promises of its prospectus. The shivery, doubting feeling of the early morning had passed away. In its place had come conviction.

Such is the story of the White Leghorn Poultry Yards Co. and the Columbia School of Poultry Culture, of Waterville, N. Y., as it was revealed to me.

He will find a ready sale for his eggs in private homes in the city, or to some one firm that will be only too glad to secure strictly fresh eggs. Into the marketing of this product of the farm let him put individuality. Let him be strictly honest as to the quality of the eggs, and prompt in delivering. Let each egg and each crate bear his name. It will not be long until Adams' eggs are in demand at something more than the market price. And unless we are mistaken it will not be many years before he will be giving that little farm his undivided attention.

Necessity of Individualizing the Business.

THE IMPORTANCE OF SIZE.

Some of the Reasons Why So Many Exhibition Specimens Fail to Attain Standard Weight—The Common Mistake Made in the Selection of Breeders—How to Feed the Chicks to Develop the Proper Size.

Written by Thos. F. Rigg, Associate Editor American Poultry Journal.

The show records this season again tell the old story—birds, as a rule, not up to standard weight.

We find this condition of affairs year after year. We are told by the exhibitors that the stock was well fed and cared for but that the youngsters would not attain proper weights.

Why is it that outside of that shown by a comparatively few exhibitors the stock shown, both old and young, is as a rule below standard weight?

We do not think that in any case of any breed or variety the standard calls for excessive weight.

The standard cannot, therefore, be to blame.

As one who is in very close touch with the situation we say that the breeders are to blame for the condition existing. It is because size in breeding stock is not given proper consideration.

The truth of the matter is that no amount of food and care be it of the best, can result in the bringing of stock to proper size when the stock comes from a line of ancestry that were of undersize.

Size is given but little attention by a majority of breeders. We hear of weight, and it is talked and written about constantly. Many specimens shown are so fat that they are worthless as breeders, but the owner had to so fatten them to get them up to standard weight. It is just such specimens as many are breeding from. No wonder size is not attained and consequently, except in the hands of an expert, weight is not secured.

Size is all important. If we have the size, the framework, the bone and muscle, we can easily put on the standard weight without injury to the specimen as a breeder. But we must first have size.

How are we to obtain the desired size and retain it?

We must, in the selection of our breeders, start with stock of the desired size. If we will do that and year after year reject all specimens which are not up to our standard we will have but little trouble; in fact, not at all in retaining size.

We must, of course, use care in feeding, for it is important that the proper kinds of food be given the stock. Even stock bred from birds possessing large frames—size—will deteriorate in size if not given the foods containing the elements which enter into the building of bone and muscle, etc. We cannot get something for nothing in the production of poultry. A chick cannot grow bone and muscle without a supply of the proper food. It can easily take on weight with foods deficient in frame-producing elements. In a word, a chick to grow properly must have food which is rich in all the elements entering into all the component parts of a fully and properly developed fowl.

It is in the development and growth of the chick that so many breeders confound weight and size. They are constantly feeding for weight.

We should, as stated, bring the chick along to maturity and at that time if it be in fair flesh it will be of standard weight. No fully grown specimen should be fattened in order that it enter the show pen up to weight.

The question naturally arises, what constitutes the proper food ration for the chicks, in order that they may properly develop size?

In this advanced age there is no excuse for a breeder being without knowledge as to the relative feeding value of the different grains, etc., used by all breeders.

Hulled or cracked oats stands at the head of all foods in value as bone and muscle producers. The standard chick foods now on the market, and now so generally used by breeders, contains cracked hulled oats, but the proportion is so very small that it will pay every breeder to buy such oats and add it largely to his feed. Then, too, there is barley and rye, which are rich in bone and blood producing elements. These grains are seldom fed, yet they are very valuable.

Oil cake meal is rich in blood and feather producing elements and should be fed regularly. We feed this by mixing it in a mash, 12 of mash to 1 of meal. The whole is baked in an oven and fed dry with the dry grain ration. The oil cake meal not only aids in feather production but keeps the chick's bowels in proper order.

Bear in mind that no chick can reach maturity in perfect

development unless it be carried along properly every day of its life. A check now and then in a chick's growth puts it out of the running.

In your selection of breeding stock hereafter give size the attention it deserves. In no other way can you succeed in building up a strain of fowls that can be successfully shown and attract the custom of the best buyers.

SOUTHERN POULTRY AND ITS OUTLOOK

Perhaps a short letter from the "Sunny South" at this time of year would be of great interest to the many readers of the AMERICAN POULTRY JOURNAL and to make it of still greater interest I may touch along the lines of southern poultry and its outlook. We are geographically situated in about the middle of the yellow pine belt, which is one of the healthiest localities in the whole South. Here we have plenty of good, pure free stone water, which is reached at a depth of from 15 to 35 feet.

Quitman, our county seat, has 25 or 30 of as fine artesian or flowing wells as can be found in the United States. We also have abundance of pine and hardwood. The pine is of the turpentine variety, and until of late the running of and distilling turpentine was one of our leading occupations. But saw mills from every direction have located here and the forests are being fast destroyed, therefore "turpentine running" has met a terrible blow. But then the wealth and natural resources of the South in general are just becoming known in the North, East and West, together with the big price for cotton, is why times are becoming so much better here. A boom in general is expected.

This has been a beautiful winter in Mississippi; have seen very little snow, not enough to make the ground white, and there has not been a day this winter but what a man could work and be comfortable without a coat. During Christmas week I sowed nine acres of oats. They are now coming up and are looking nice and green. Today we began preparing land for Irish potatoes. Will plant the first of February. A good many of our truckers have already planted peas and set their cabbage plants. Will be planting corn in six weeks.

Cotton is our main crop, and next in importance is corn, peanuts, peas, sweet potatoes, cane, oats, hay, melons and all kinds of vegetables and fruits. Owing to our mild climate I believe this to be one of the finest localities in the United States for the raising of poultry. Yet it is greatly neglected and of blooded stock especially. We keep quite a large flock and we find they are one of the best paying features of the farm. They are fed principally upon Spanish peanuts and they are a most excellent food as they are great egg producers and the fowls are always in a shiny and healthy condition.

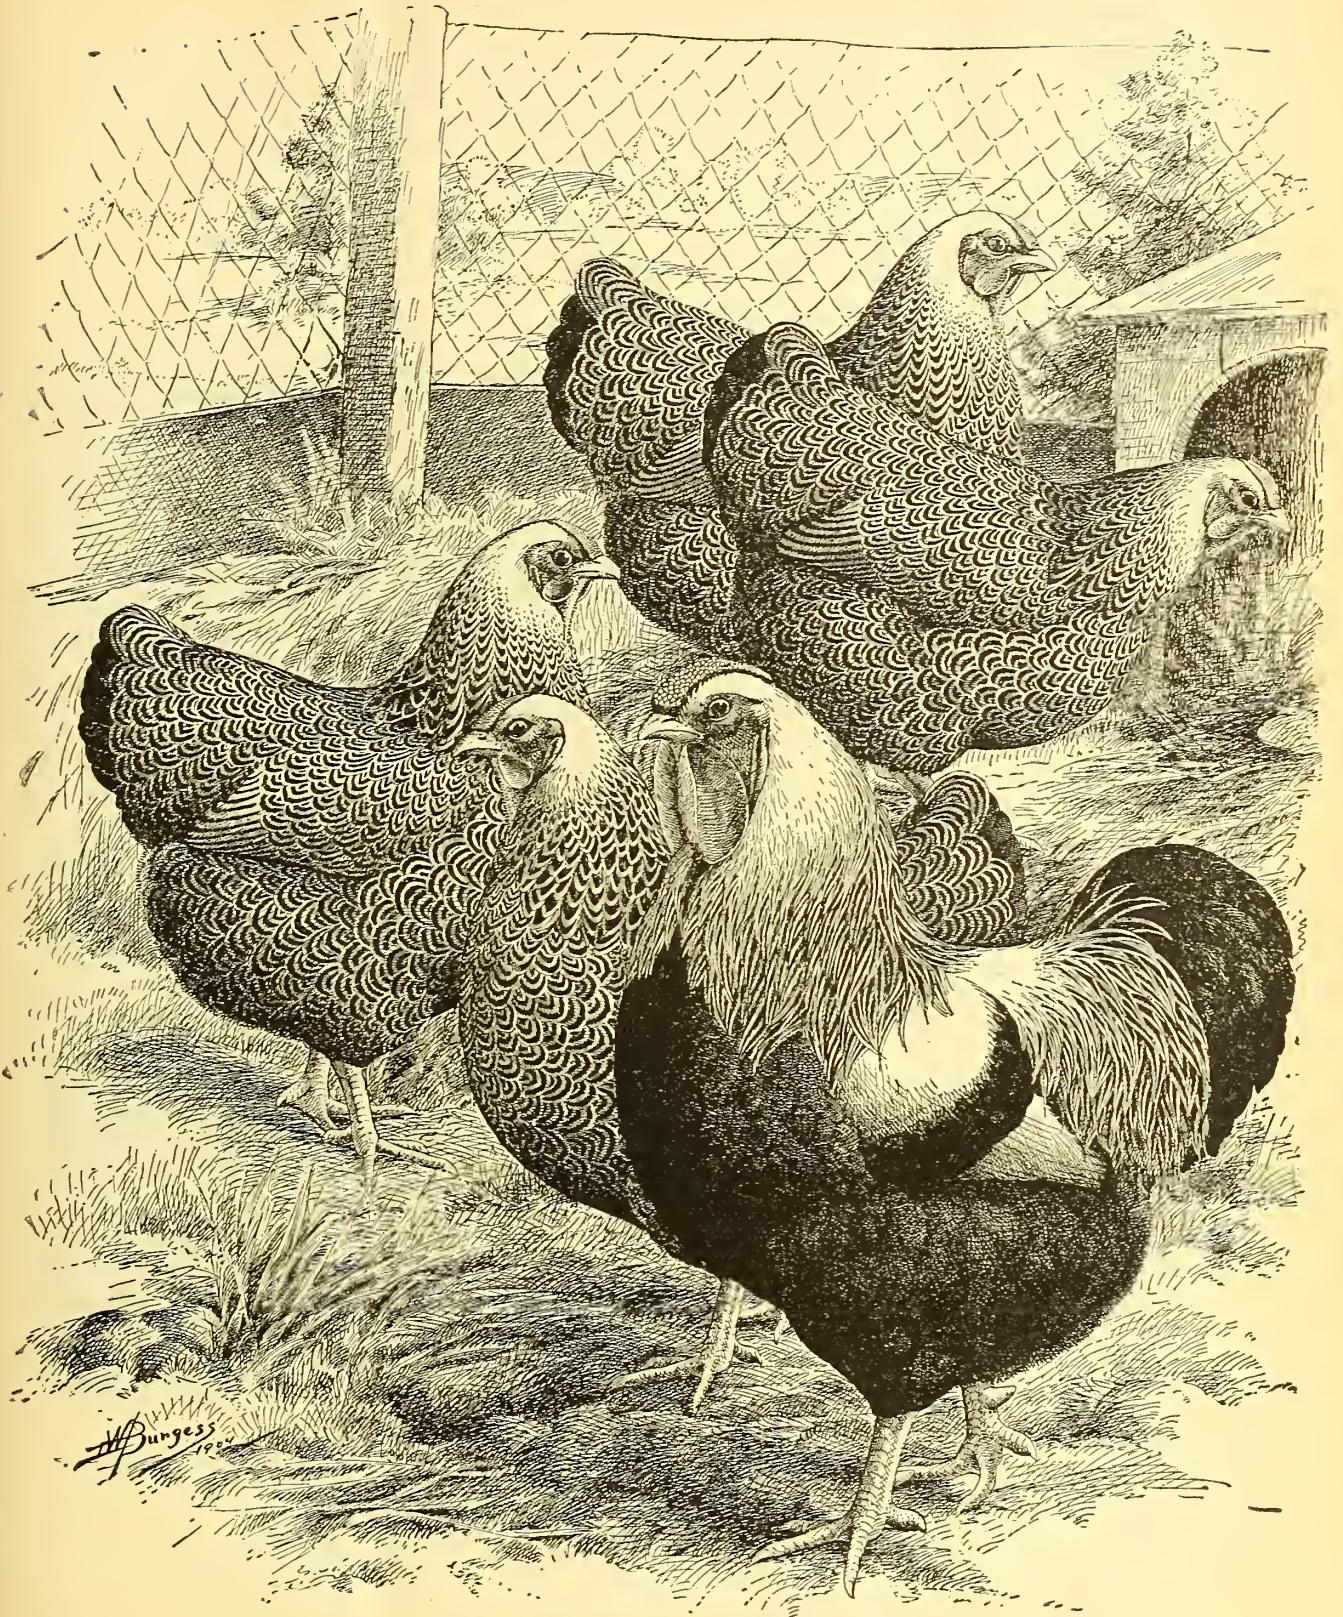

A friend of mine, Mr. C. A. Strohman, of Wisconsin, tried feeding his fancy Barred Plymouth Rocks on them and in a recent letter from him he said I had just ought to see his flock, which was just ready for show; that he had been feeding on the early Spanish peanuts; said they fairly shone. He also stated that he raised his own peanuts, and I don't see why they cannot be raised in most any latitude for with us the Spanish variety will mature in ninety days.

The markets of the South are also in favor of poultry growing for they are always willing to pay big prices for both eggs and fowls. During the holidays eggs advanced as high as 50 cents in some of our home markets, and I wouldn't be surprised if they reached 75 cents in our gulf ports. I have never had much experience in raising fancy poultry. But judging from the knowledge I have I believe peanuts are one of the finest kind of foods there is to make a bird look "sporty." In conclusion, I hope this short letter will be interesting and comforting to the readers of the AMERICAN POULTRY JOURNAL who have been shivering around in the deep snow for these many weeks. Wishing all success I close. Yours truly,

De Soto, Miss.

C. G. VANNESS.

We advise Mr. Adams to buy not to exceed two pens of fowls of the breed selected. It would be better, perhaps, if the start was made with one pen, say one male and six to eight females. And here is where we lay the foundation of the business. He should buy this stock of a breeder who has a thoroughly established strain of fowls. He should buy specimens representative of the best of the breed in shape, color and all markings. These females should be, if possible, full sisters. The male should carry some of the same blood as the females. A few of such fowl will cost some money but are cheap at most any price. With such a pen our correspondent has something upon which to build.

E. G. WYCKOFF'S SILVER PENCILED WYANDOTTES.

First pen Silver Penciled Wyandottes at the Great World's Fair show bred, owned and exhibited by E. G. Wyckoff, Ithaca, N. Y. In all the Wyandottes at this the greatest Wyandotte show ever held in the world, over 2,000 birds in the class, it is doubtful if five individual specimens of any one variety, regardless of owners, could have been selected showing more real merit than the cock and four hens representing this pen. Grand in shape, comb, color and size. A credit to the breed and an honor to the owner. In this great show, Mr. Wyckoff won every first prize and every second prize but one, a record, considering competition, that will probably stand for years.

PROCURING FERTILE EGGS.

Quality and Management of fowls for Procuring the Highest Percentage of Fertility.

The fertility of eggs depends largely on the quality of the stock. If we expect to have a large per cent of fertile eggs, we must breed stock that has stamina and strong vitality. We must properly mate and feed to produce fertile eggs.

For breeding, every poultryman should use birds of strong and vigorous temperament; birds capable of reproducing their characteristics in their offspring. From such birds we may expect, under proper conditions, to get a high percentage of fertile eggs.

Having birds possessed of these combined qualities, provide a house that is well ventilated, commodious and clean, and have it so constructed that the pens will be warm in winter. Let it be large enough to give a limited number of fowls all the exercise they need. Birds crowded in close quarters, with not enough exercise, will soon have impaired health and cannot, on any account, produce very many fertile eggs, and those that are fertile will generally bring weak and sickly chicks.

It is plain that selection in breeding can accomplish nothing unless the birds are first surrounded by favorable conditions. First, have the conditions favorable, then select your birds with judicious care, having constantly in mind the object sought for in selecting your birds.

The bird of superior merit not only has more good points but it has fewer bad points. When we select and mate two superior birds, their merits are doubled and their defects are divided, as compared with the merits and faults of birds reproduced in their offspring. The above we find especially true in mating birds; if we mate birds showing stamina and strong vitality, we look for a high percent of fertile eggs, and this special characteristic will be established in their offspring.

When selecting a male bird we must not lose sight of the fact that he comprises half the flock. It is therefore expedient that we select one that is strong and vigorous and well developed in his sexual qualities and showing nothing of weakened vitality.

As regards the selection of females, we must take into consideration the fact that each flock has three classes of layers, viz.: the heavy layer, the average layer and the poor layer. Each flock has hens whose eggs hatch well and also hens whose eggs are almost entirely infertile. We have no rule whatever that the heavy layer is identified with the infertile hen. If we assume that the heavy layer's eggs are infertile because of heavy laying, we are just as far from the fact as the statement that the poor layer's eggs are infertile because of the few eggs they lay. Where stimulants are used to increase the egg yield, or if a hen is forced to lay two hundred or more eggs a year, it may doubtless be expected that the eggs from the heaviest layer would prove most infertile.

When stimulants are regularly fed to increase the egg yield, infertility may be immediately noticed in decreased percentage of eggs hatched, and the mortality in the chicks that are hatched. The few chicks hatching from such eggs will be weakened, sickly, and none of them will likely remain in the course of a few weeks. It stands to reason therefore that what prevents so many hatching must certainly affect the health of those that are hatched. In seasons when your eggs show a high percentage of fertility, the chicks will usually thrive well. On the contrary, take years when the eggs do not hatch well what will be the result: the chicks will be poor and weak, many living only a few days, and those that live longer will be more or less troubled with colds, swollen eyes and other diseases. The cause of the small per cent of fertile eggs and mortality in chicks can invariably be traced directly to improper feeding.

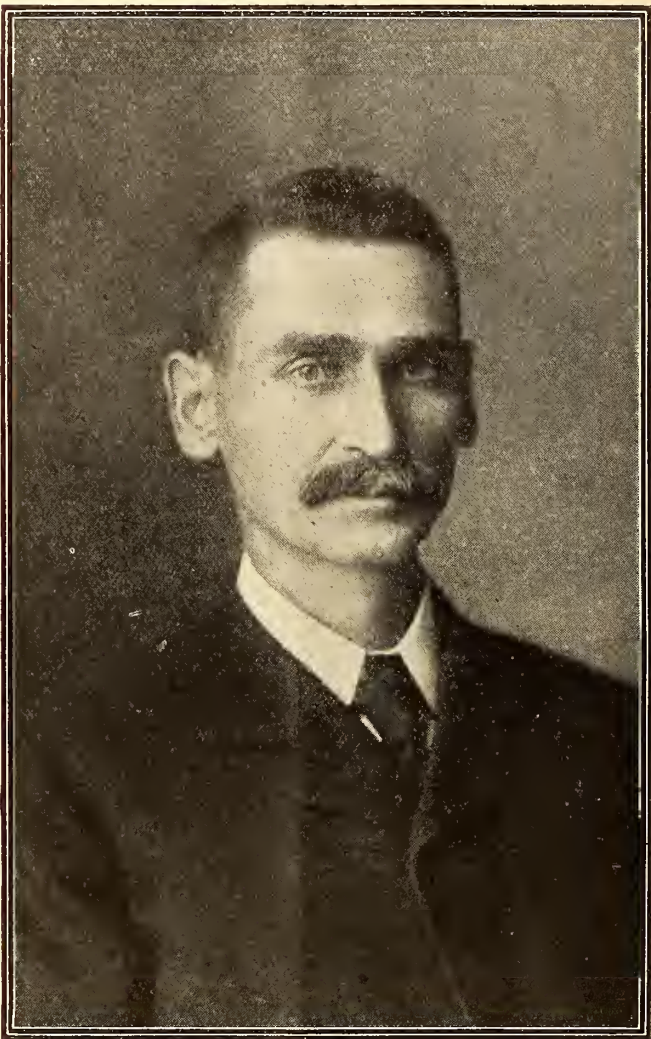

Does any one of us know what proper feeding is? Experience will be the best teacher in this respect. We should try and bring the conditions as near to nature's conditions as we possibly can. When a hen steals her nest and comes off with every egg hatched, those eggs certainly had the highest per cent of fertility. Here nature had its own way and brought about the desired result. Now we ought to study nature's ways, and the nearer we get to its ways the better results will be.

In our efforts to obtain satisfactory results we should imitate nature as far as possible, and where it seems to us that nature lacks one important factor, we should improve on it as far as our limited knowledge can conceive.

Fowls will not exercise for the sake of exercising. When given a full crop in the morning they will doze around until they are prompted by hunger to move. I have learned by experience that when given a full morning mash they apparently do not see the grain thrown in the litter for them.

Good results are obtained by different breeders through so many different methods that an attempt to give a fixed method of correct feeding would prove futile. However, a few things to be taken into consideration are the breed, or breeds, kept, and the climate. A fixed ration adapted to one of the smaller breeds would perhaps bring highly encouraging results and on the contrary, bring very discouraging results when fed to one of the heavier breeds.

The climatic advantages are such as to place the Southern States pre-eminently at the head of any other section of the United States or Canada for high percentage of fertility any part of the season. The breeders of the South can give their fowls free range when our fowls must be confined on account

G. D. HOLDEN
President American Poultry Association.

of the severity of the climate in winter and consequently the per cent of fertility is decreased.

A method successfully followed by a large number of poultrymen is to throw all grain in litter strewn in the pens. Before feeding have your pens strewn with deep litter or straw; in this throw some grain in the morning—just enough to keep the hens busy scratching for it. This is certainly nature's way, as the hens have to exercise to get each grain. When this method is followed the hens have no chance to gorge their crops and doze round the rest of the day. At night a warm mash should be given. This will digest quicker than grain, besides bringing the birds from the roosts in the morning with a sharpened appetite. The plan of feeding the mash at night is far better than when fed in the morning or at noon. They fill up on it and stand round all the day till the night feed comes. Where grain is fed at night

in deep litter, it is often the case that it leaves the hen with probably only half a feed. There is no fixed rule for quantity, nor will there ever be. Watch them—study their wants and then supply them as well as you can. Do not overfeed them; this you can hardly do if they have plenty of exercise, but do not go to the other extreme and underfeed them—each will have its bad result. Fowls need a variety of food. At noon cabbage, turnips or some other green food will be greatly relished. Supply plenty of grit and also fresh water daily in clean drinking fountains. Rinse or wash the fountains daily, so that the hens may always have access to pure water, and not this filthy, impure stuff that has been standing for a few days in dirty fountains. Impure water given to fowls will show decreased fertility, and it is certainly one of the best agents to bring disease.

In the poultry business, as in all other vocations, success depends quite as much upon minor details as upon the major details. The smaller details often become the most important

T. E. ORR
Secretary American Poultry Association.

when taken in the aggregate. The work of caring for our fowls seems at first thought to be only a minor detail, but when everything is taken together, what would poultry keeping amount to if the fowls did not receive the care and attention they need. At what time of the year is care not necessary for the fowls? They certainly require constant care, although they should have special care during the breeding season and the moulting period. Care must be taken in feeding and careful attention should be paid to the cleanliness and to everything that is for the fowls' comfort. House your fowls comfortably, and this, with due regard to the other features mentioned, should give you satisfactory results.

Fowls, as well as human beings, appreciate nice, clean and cheerful quarters, and when kept in such will be found to more than pay for the extra work given. Cleanliness is the one word every poultryman should have in mind, as it is one

of the first essentials to success in poultry keeping. Where cleanliness is exercised in every detail, there will be little trouble with disease, and with that undesirable vermin, lice. When fowls are once infested with lice it will be found extremely difficult to have them exterminated. Have your roosts so arranged that they can be easily cleaned. Scrape off the droppings every day. Scatter chaff on the dropping board, as it will aid in removing the droppings, besides being of great value in retaining the fertilizing properties. Provide dust boxes in every house as they are a necessity. The dust bath is the same to fowls as the morning bath is to civilized man.

See to it that there is no draught through the pens at night, as nothing will affect your fowls more than a strong draught of cool night air.

To become a successful breeder you must be a lover of poultry, and be also adapted for the work that necessarily comes to a successful breeder.

Do not commence on too large a scale, especially if you have had no experience with fowls. Take into consideration that you must have a place for the fowls, money must be invested in good birds, food and other materials, and finally, hard work and plenty of it is necessary in the care and management of fowls.

Be with your birds as much as time will permit. Get them to be tame and docile. Birds that are tame will be glad when they see their owner coming, as they know they have nothing to fear when he is among them.

When you come into a chicken house and the hens fly for the nearest window, or make their escape the quickest way possible, it indicates harsh treatment, or shows that the tender regard that ought to exist for the birds is wanting.

In conclusion let me state that there are essential points in poultry culture of practical benefit to every fancier that are of untold value. These can only be acquired by experience. However, much we may be aided by the good advice of others we must learn by doing ourselves.

There are two ways of doing almost everything—a right and a wrong way—rearing and keeping fowls is no exception. There must be systematic work, and the same reasonable attention to health and thrift that is given to all business, if we are to attain success.

M. C. HERNER.

Manheim, Ont.

ADVERTISE AND PROSPER.

The best advertised business as a rule is the most prosperous. But we should be sure we have something worthy of attention before we call attention to it. High scoring birds in good condition, exhibited in the show rooms, are good advertisements as far as they go, but they do not go far enough. The best poultry journals and papers go much farther. I hear you say that is expensive. So we thought for fifteen years and during that time when we wanted good stock, and that was always, we paid a good price for it to some one who was not afraid to advertise. Do you think it paid us to send stock and eggs to the common market, such as other people were selling from \$1 to \$25 a head and eggs \$1 to \$5 a sitting. Very poor economy it was. Don't you think so? It is a poor business that won't stand the expense of a little advertising. Every breeder should go by the golden rule and not send out stock or eggs that he would not want to use himself. It would be better to sell no cheap birds than to sell those not fit to breed from. It may be an easy way to sell all good stock but a small pen or two of each variety, and advertise eggs from pens of high scoring birds and then go on and sell hundreds of sittings of eggs from a main flock headed perhaps by an inferior or unsalable bird, fit only for the dinner pot. I have known some to do this and have been advised that that was the way to make the business pay, but I doubt if such a policy would pay in the end. At any rate a true fancier would scorn this way and would hardly enjoy the dollars and cents it gained him at the cost of his reputation in the end; and the thought that such stock was sent around the country as of his breeding. I hear fanciers say: I send the best birds to the best customers. Every customer should be considered a good customer and be accorded equal consideration. One never knows when they send out stock who will see it or how much opportunity it will have to help or hurt his future trade. It is the safest and pays the best to do a straightforward, honest business and have everything that is sent out just at it is represented. Such a policy with care in breeding and proper advertising will in the end win success in the poultry business, which is no longer a small item left to the management of the women and children of the family, but a great and growing industry, with room for many more competitors.

T. R. BELLAMY.

Norwalk, Ohio.

Geo. W. Mitchell's World Renowned Partridge Cochins.

**America's Leading Strain of Great New York Winners
Illustrated in this month's American Poultry
Journal Frontispiece.**

The beautiful frontispiece of one of Geo. W. Mitchell's Partridge Cochins is adapted and enlarged from one of Sewell's pictures that he made from a model furnished by Mr. Mitchell and rearranged for AMERICAN POULTRY JOURNAL by our special artist.

The best introduction for this article that can be made to our readers is the significant statement that Mr. Mitchell's Partridge Cochins have been very prominent winners at Madison Square Garden, New York, for many years and that Mr. Mitchell has three times won the grand special for best cochin, competing with all varieties of cochins. Going back over a period of nearly ten years, Mr. Mitchell's record of winnings reads like a complete list of awards at a Poultry Show. Present day breeders, as a general rule, look to recent winnings in order to establish the value of a man's birds, but a record of continuous winning for ten years or more is something out of the ordinary and is certainly a basis upon which to lay claim to superior excellence. At the recent New York Madison Square Garden Show, Jan., 1905, Mr. Mitchell won 1st and 2d cock, hen, cockerel and pullet, also winning the grand special for best Cochin any variety, competing with the Buff, Partridge and White.

In speaking of his birds, Mr. Mitchell says: "It has long been my purpose to establish a strain of Partridge Cochin fowls that will produce males and females of the highest quality from a single mating. How well I have succeeded in this can be considered from my record. While building up my blood lines for the production of this high quality from the single mating plan, I have continually followed the double mating plan, particularly for producing exhibition males with the proper top and breast color."

Mr. George W. Mitchell, of Bristol, Conn., breeder of exhibition Partridge Cochins, is one of the pacemakers in the poultry field, says a writer in a recent reliable poultry journal. For many years past he has bred the best Partridge Cochins produced in the world. This is saying much, but it is the fact. Not only this, but Mr. Mitchell has attained a degree of excellence in his birds that has been a revelation, not alone to breeders of Partridge Cochins, but of other varieties of standard fowls. Really the work he has accomplished falls little short of the marvelous.

It is impossible for the uninformed to realize from an attempted description in words what Mr. Mitchell has succeeded in doing. He has obtained a rich, lustrous, mahogany surface color and a regularity and uniformity of penciling in Partridge Cochin females that is truly wonderful. He has shown not only the public at large, but expert breeders as well, what can be accomplished in the production of fowls bred to an ideal. For a person with an eye for beauty in form and color to pass down the aisle of the New York show, inspecting one by one, twenty or thirty of Mr. Mitchell's finest specimens, is for that person to dimly realize why "poultry cranks" exist and why a man once thoroughly imbued with a love of standard poultry, that is, of standard poultry of highest quality, never gets over it.

Recently the writer stood looking at some of Mr. Mitchell's birds that were being shown to him by Mr. Anderson, their caretaker. A third person stood near-by who displayed some interest. Finally he said, "At what price do you hold birds like those?" Mr. Anderson replied, "Anywhere from \$50 to \$500 each." How extreme these prices must seem to the uninitiated, to persons who care little about standard-bred poultry and know even less. But these prices are legitimate and bona-fide. They are prices which Mr. Mitchell actually values birds of this quality, and their value is fixed not alone by his love for them, but by the demand which exists for them. We know it is a fact that every season Mr. Mitchell turns down dozens of orders for high quality exhibition birds, simply because he can not breed enough of them.

The country to-day has all the "fair to good" birds of the different breeds and varieties it needs—yes, far more than it needs, but there is now and will continue to be throughout all time, or so long as man occupies this planet, a scarcity "of the best." There will always be the same effort among men to produce the highest quality, and the demand for birds of this kind will steadily increase with

the increasing population and wealth, in fact will never be less than it is to-day, and to-day it far exceeds the supply. This is one branch of the poultry business in which we have great confidence.

Although Mr. Mitchell's residence at Bristol, Conn., is right in town, he has demonstrated that it is not necessary to have a 40 acre farm to raise fine birds. His poultry house is a model for neatness, and the second story is entirely arranged with individual pens for setters as well as pens for mated birds. It is equipped with incandescent electric lights so that the birds can be seen to good advantage in the evening.

A visitor at his place thus described the birds as he saw them:

A long row of exhibition coops extend the whole length of the building, and we found these full of birds for our inspection. It is hardly necessary to say that they were Partridge Cochins. Among these birds we found some grand colored males with splendidly marked saddles and hackles, and fine leg and toe feathering. The true shape was also very noticeable. Coming to the females, we saw the birds that won as pullets at New York last year, and in their matronly state they seemed to be even better than when

BUFF WYANDOTTES.

First prize hen Chicago, Dec. 1903, sitting. Third prize hen Chicago, Dec. 1903, standing. Bred and owned by Ackley & Page, Woodstock, Ill.

younger. The penciling is something grand, and they possess that rich color so much admired by the lovers of the Partridge Cochins. Next in order came the young males, and although they were not hatched until well into the summer, they have matured well. They looked as though they had been groomed for the occasion, but it was simply the result of excellent care from the time they were hatched. Here shape was again prominent, as was also the strong color points of their sires. Passing on to the pullets we found some gems, penciled most exquisitely, even down into the fluff, and one of them has the shortest legs we ever saw on a Cochin, with immense fluff and full breast. She looked like a great ball of feathers resting on the bottom of the coop.

To sum it up, we can say that Geo. W. Mitchell has a national reputation as a breeder of Partridge Cochins, and has never failed to take nearly all the prizes at the great poultry shows held at New York annually for many years.

We like the tone of that letter and believe that if Mr. Adams goes into the poultry business he will meet with success. Any laboring man who will practice strict economy and by reason of this become possessed of a home is the kind of a man who is very apt to succeed in whatever he undertakes.

BOYERS BREVITY ITEMS.

Written by M. K. Boyer, Associate Editor American Poultry Journal.

HINTS ON DOCTORING.

A too-fat condition is not a healthy one.

A bright red comb and face is a good indication of health.

An ointment of vaseline and sulphur is a good one for scaly legs.

For canker in fowls, alum water is recommended. Put alum in the drinking water.

There is nothing better for frosted combs and wattles than vaseline.

The best tonics you can give your stock are fresh air and exercise.

A busy fowl is never a sick one. The moment it is ailing it becomes mopeish.

Disinfect, if possible, once a week. It is the only way to kill disease germs.

Idleness cannot be classed as a disease, but is a condition that quickly leads up to such.

Disease comes to many flocks through the drinking vessels. Disease lurks in filthy water fountains.

It is a noteworthy fact that the cry of "cholera" comes from sections where corn is the main diet.

Another cure for sore head is bathing with salt water, and afterward anointing with carbolized vaseline.

For sore head or chicken pox, an ointment made of two parts lard and one part kerosene, is reliable.

Cases of roup have been greatly benefited by placing a little bromide of potassium in the drinking water.

The United States Department of Agriculture recommends, in warding off roup, a decrease in the proportion of corn, and an increase in the proportion of meat food, in the daily ration.

There is nothing better for a recently contracted cold than a one-grain quinine pill given each night for three nights in succession.

Fowls are naturally of a hardy nature. They can be kept so by breeding only from the strongest and most vigorous birds, and never inbreeding.

For sneezing, and slight colds, a simple remedy is a tablespoonful of kerosene in the drinking water, to be repeated for several days in succession.

For limber neck, a teaspoonful of sugar, dissolved in a wineglass of water, a lot of which is squirted down the throat of the afflicted fowl, is recommended.

While we are opposed to give a well fowl medicine, we can see no reasonable excuse for allowing the first symptoms of sickness to develop into disease.

If the droppings of the fowls are not in normal condition, give a teaspoonful of soda water (bicarbonate) to each afflicted bird. In making the water use three heaping teaspoonfuls of soda to a pint of water. Follow with a one-grain quinine pill each night for three nights in succession.

Salt aids in the performance of the various functions of the body, as digesting the food and its absorption of the blood.

It is said by those who tried it, that gin and molasses, equal parts, put in a bottle, and well shaken before using, is an excellent tonic and preventative of colds and roup.

NOTES IN PASSING.

There is a greater danger in carelessness than disease.

Nothing will more quickly make scrubs out of good stock than scrub treatment.

April hatched Leghorns generally give better results than those hatched in May.

We would rather own a healthy and good scrub fowl than a poorly-bred thoroughbred.

It is a "penny wise and pound foolish" practice to start a poultry farm with scrub stock.

It is only the shiftless poultryman that puts off until tomorrow what should be done today.

We fear this getting the Brown Leghorns down to bantam size is going to cripple the egg production.

C. P. Reynolds says vigilance wins a thousand successes for the poultryman where "luck" captures one.

Women, as a rule, are more successful with poultry, as they are more mindful of the details of the work.

We never yet saw a man succeed in poultry culture that had a quick temper, or who was easily discouraged.

It is better for the wife to earn pin money at poultry raising than at the washtub or the sewing machine.

Patience, perseverance, pluck, enterprise and capital are qualifications that every poultryman should possess.

Whatever is worth doing at all is worth doing well. Things done in a haphazard fashion are never rightly performed.

The American idea in a breed is hardness and utility, and any fancier who ignores those qualities is certainly un-American.

The *Poultry Herald* thinks poultry raising is similar to farming, in that it is not so much the number of acres owned, but the number properly handled that gives the profits. Small, well-cared for flocks of fowls always bring the best returns.

He wants information upon which he can rely, and which will enable him to start aright.

"Bad luck" is nothing more than a penalty for mismanagement. Before you begin to complain, it would be better to investigate.

A simple way to distinguish the sex of Guinea fowls, is to compare wattles; those of the male are double the size of those of the female.

Remember, there is no effect without a cause. If matters do not go exactly right on the farm, look up the reason and apply the remedy.

It is unwise to breed more than two years from the same male, as there is a danger of weakening by the common degeneration which always results from inbreeding.

"Love lightens labor." This is very true in the poultry yard. Those who love fowls will give them the best of care, and the work becomes a pleasure instead of a hardship.

If you have a man on the farm who merely works for wages, get rid of him. On the other hand, if he takes a live interest in your welfare, he is a treasure, and you should take good care of him.

The habitual loafer is a menace to any well regulated poultry farm, and she should be made to do pot service at the very first opportunity. That is *Iowa Homestead's* opinion of the idle hen, and it is a good one, too.

It is impossible to avoid all misfortune. Setbacks come to the most experienced men. But if we carefully note each stumbling block, and will try to get at the bottom of it, the chances are we will soon master the situation.

A good, and at the same time cheap, disinfectant is made by dissolving in five gallons of water, three pounds of copperas, to which is added one pint of crude carbolic acid. Use a common watering pot and sprinkle the house and yard occasionally with this mixture.

"Procrastination is the thief of time" is an old proverb that applies to the poultry yard as forcibly as anywhere else.

Well cared for, a man can make a good living with hens, says *Iowa Homestead*. There is no fortune in their keeping, but there is a good, steady occupation.

The *Baltimore Sun* says a safe cat among chicks is a nine times dead cat. That all depends how you raise and treat the cats. The writer always keeps about a half dozen cats on his poultry farm, but they were all raised among the chicks, and being well fed, they have no desire to catch chicks.

We want better egg records, and we want better carcasses, but it does not seem to have occurred to the average poultryman that it is far easier and better to secure or increase those qualities in the breeds we have, by proper care and mating, than it is to manufacture something new with the desired traits.

He who aims to make a living by poultry culture, says the *Poultry Messenger*, must be industrious and hard working. But hard work alone will not bring success. Some of the hardest working people in the world make a failure of life. The labor must be well directed—in accordance with a well thought out plan.

Breeding for beauty is all right in its place, says *Farmer's Voice*, but where beauty interferes with utility, is the place to let beauty take second place. There are mongrel hens that lay as many eggs as the most prolific Leghorns, but they cannot be depended on to transmit the tendency to their progeny. This is where the mongrel fails.

The late William Cook, of England, once said: "It is utility that the keeper of farm poultry has in view. His standard is, or should be, one made up of table qualities, laying powers, and constitutional hardness. He may attach more or less weight to table qualities or laying powers, according to circumstances, but both must always be kept in view."

The *Poultry Messenger* says the road to success is through a maze of mistakes and failures. The man who trips and falls and lies sprawling on the ground, bemoaning the misstep that brought him down, is not fit for the chicken business, or for much of anything else. The poultry business would lose half of its attractiveness if people of that stamp could succeed in it.

Among the reasons why many poultry raisers fail to meet with success, when they increase their flocks, the *Baltimore Sun* assigns the following: They fail to increase their accommodations in proportion to the increase in the flock; they fail to recognize the fact that large flocks are difficult to feed so that each individual may secure its allotted share; that various ailments have to be guarded against where large flocks are kept.

GUARANTEED SUBSCRIBERS.

To our subscribers the display advertisers of the American Poultry Journal are guaranteed; that is, if any advertiser using display space in these columns is proved to be a swindler, the American Poultry Journal will make good to the subscriber the amount lost. We do not guarantee that men in good standing shall agree in their opinions; we do not guarantee nature against infertile eggs, but we do agree that in case a downright swindler succeeds in swindling a subscriber, we will reimburse that subscriber and publish the rascality of the swindler. We ask, in consideration of this guarantee, that our subscribers, when writing to an American Poultry Journal advertiser, say, in every case, "Saw your ad in the American Poultry Journal." In no case will this be to your disadvantage, while in many cases it may serve you well. In either event we shall be obliged to you.

Twenty-Ninth Annual Meeting of The American Poultry Association.

This annual session will long be remembered as one of importance in the history of the American Poultry Association. Some comment has been made at the lateness of the day in the week and the hour in the afternoon at which the meeting was called. While this may have worked against the interests of some who had made other appointments for the latter part of the week, yet it is not without its recompense. The judging of the show and its consequent annoyance had been completely finished and those in attendance were at liberty to give their undivided attention to the business report.

It was evident before the meeting was

called to order that there was quite a feeling against the program which seemed to have been arranged. It has been charged against the American Poultry Association that it always elected its chief executive officer from the members who happened to be in attendance from the city where the meeting was held. This method, it is contended, did not bring out the best available candidates. It was rumored that a meeting had been held of the Minneapolis men and a selection made as to the president to be elected.

Quite a number of persons have made applications for membership, and it has always been charged that these new members join, becoming annual members, simply for the purpose of voting. In confirmation of this, it has been pointed out that the annual members did not, as a rule, follow up their membership by the payment of annual dues. It has been urged for many years that something should be done to stop the practice. On the other hand, it was now contended that it should not be done at this Minneapolis meeting. But when the executive committee met, it was found that a majority were opposed to admit any new members until after the election.

Mr. Holden, of Minnesota, was nominated for president. Mr. Crawford of New Jersey was put in nomination and it was urged that Mr. Crawford, as an old member has grown gray in the service and it was not fitting that we should pass over the many such members and give the honor to one who never had attended more than one session of the Association. Mr. Holden retorted that this was right, as he believed that Mr. Crawford ought to be elected. This remarkable utterance coming from a candidate carried with it such honesty of purpose, such a comprehensiveness of the needs of the Association, that the one who nominated Mr. Crawford saw fit to withdraw the nomination, stating that it was the principle that was at stake and not the man and Mr. Holden seemed to fit the principle. The argument was not like a two edged saw which cut two ways; while a man should not be elected simply on account of location, neither should an honest and able man be passed by because he happened to be a resident of the place where the meeting was being held. Thereupon, Mr. Holden was unanimously elected. Mr. T. E. Orr was put in nomination for secretary by Mr. Frank B. White of Chicago, ably seconded by Mr. Hewes, of Indianapolis and unanimously elected. Vice-Presidents and members of the Executive Committee, Auditing Board and Advisory Board were in most cases re-elected to the offices held by them the previous year.

The Rose Comb Rhode Island Reds were admitted to the Standard under the name of American Reds. The Pea Comb Buckeye Reds were admitted to the Standard under the name of the Buckeyes. The petition of the Rose Comb Rhode Island Red men received but slight consideration. It was urged that the constitutional requirements of the exhibition of specimens, old and young, of each sex at the show in connection with which this meeting was being held, had not been complied with. We may mention it is hard to understand, however, how the American Reds could have been admitted as the breed which had formerly been called Rhode Island Red, if there were not the proper

requirements as to the exhibition of the Rhode Island Reds. The meeting voted it would not admit the Rose Comb Rhode Island Reds.

Attention was called to the fact that when at Rochester, the Association adjourned to meet at St. Louis, it was with the proviso that it should be without expense to the Association. The officers had been obliged to attend and pay their own expenses whereupon a motion was made that the action of the Rochester meeting be resented and that the President be allowed his hotel and traveling expenses.

Mr. Smith, of Oregon, was voted a member, having paid, as it was claimed, his fee for life membership to H. A. Bridge. This statement was questioned by Mr. Kimmey who thought he recollected that the membership fee was paid to Mr. Orr.

The Association adjourned to meet at Hagerstown at a date to be appointed by the President and Secretary.

The Minneapolis Show.

The city of Minneapolis is to be congratulated on its possession of so enthusiastic and loyal a band of officers as that which has control of its annual exhibition. To them, Minneapolis and Minnesota is the world. They raise the most and the best wheat; their corn, if not the greatest in quantity, is the best in quality; a building seven stories high is a sky scraper; their chickens can crow the loudest and lay the most eggs; their show is the greatest on the continent and the largest, except alone New York; they took the most prizes at St. Louis and their prizes were the highest percent. All of these boast is the common talk around the show room and wherever one gets in contact with a member of the committee. Perhaps, many of these statements may create a feeling of envy in the breasts of the stranger, but is soon to be dissipated by the generous hospitality and good friendship with which he is enveloped.

The exhibition was held in the upper story of the court house. The building is large and commodious and furnishes ample room for the purpose. Right in the heart of the city, with elevators to take one from the street to the door of the show room, is something of which few shows can boast.

The exhibits of poultry, pigeons, cats, dogs, incubators, brooders, supplies and poultry appliances was good. It seemed as if the birds were of the finest quality. Some comments from strangers were made as to the condition, but it should be remembered that zero weather is not conducive to the best appearance of stock.

The judging was done expeditiously and everything was harmonious. Not a single complaint was registered. Either the selection of judges had been very fortunate, or else true sportsmanship which could smile at defeat was in attendance.

It was a busy time. No opportunity was given for loitering. The meeting of the American Poultry Association, of which we speak in another place, was on the program. This was followed Friday evening by a banquet to members and exhibitors, and such a banquet. Good fellowship and hospitality was in control. After satisfying the wants of the inner man (and woman), came a program of literary feasting arranged

with admirable care. Would that we could give the witty sayings of the toast-master, the eloquent words of welcome and the oratorical brilliancy of responses. Suffice, it is to say, all was above the usual standard of such occurrences.

Early the next morning special cars were provided for the visitors which gave them a trip around the city. All points of interest, including the world famed Minnehaha Falls were visited in turn. A brief rest was taken at the rooms of the Commercial Club of St. Paul where an elegant lunch was provided. It was with a feeling of thankfulness to Minneapolis and its friends and a fullness of its entertainment that the week closed.

To the Editor AMERICAN POULTRY JOURNAL.
BLOOMINGTON, ILL., Jan. 20, 1905.

Dear Sir: I have just finished reading the article by J. F. Davis, Esq., of Iowa, in your January issue, and I wish to congratulate both him and you on that article. At this season of the Poultry Show hundreds of people are taken with the chicken fever in a violent form, and that is the best article for them to read I ever saw in print. Every sentence is a gem from beginning to end. If it were printed in capitals by every Poultry Journal in this country and reappear in each succeeding issue for a year it would be giving the article its just deserts and be a lasting benefit to the poultry industry.

Yours respectfully,

H. RINGHOUSE.

The above letter from Mr. Ringhouse is so cordial and flattering to the editor of the AMERICAN POULTRY JOURNAL that we cannot resist publishing it, thereby again calling the attention of our readers to this article, who, perhaps, in the hurry of the busy season have not read it.

The value of this article by Mr. Davis was so apparent to us that we believe every reader of AMERICAN POULTRY JOURNAL should share in the good work and advice contained therein. Every season there are thousands of fanciers commencing in poultry business, and it is the work of the poultry journals to repeat year by year the instructions for the beginners, and carry the work forward month by month. In this way the AMERICAN POULTRY JOURNAL claims to be a text book for the guide and information of the fanciers each month. However, Mr. Davis has in a few columns so condensed and simplified the main features of the poultry business that no

beginner should feel content without having first read this article and absorbed the splendid advice that he has given.

It is hardly necessary for us to say that this article is only one of many equally good ones that we aim to give readers of the AMERICAN POULTRY JOURNAL, not only in one month, but in every month of the year.

* * *

An Englishman's ideas regarding our shows makes interesting reading—and doubly so when these ideas are caustic. Mr. William Purdy, in the December 30 issue of Poultry, published in London, gives his views to the English fancy on our late St. Louis show. He begins his article by saying "the greatest talked about show ever held in America has passed away." After criticizing the method by which the entries were numbered, he begins to compare the quality of birds with those of their International, Crystal Palace, Birmingham and London dairy shows. He says we are behind modern up-to-dateness. The cooping and sanitary arrangements also get a bit of touching up from him. We think our St. Louis show judged quickly, but he does not. He compares the twenty-four cattle barns with the Palace we hear about, for both light and comfort. He likes our Barred, White and Buff Rocks and the Silver Penciled and Partridge Rocks as well. "Charming," says he! Rapture filled his soul in our White 'Dotte alley. He laughs at our still hunt for "down" or "stubs" on legs and between toes! "Putting a premium on faking." Our Silver and Golden Wyandottes are inferior to theirs! Our Brahma type is so different! Cochins are poor, outside of four birds. Langshans were fair, but lacked finish. Dorkings—except the winning pen of whites—were an insult to the breed. Orpingtons were good, but he says: "Oh! the judging," in such a way that shows he doesn't like it. Hondans were "poor," Polish were "fair," Anconas and Andalusians "moderate." He likes our Leghorns and says we breed handsomer birds than they. Minorcas, in blacks, he compares to Black Hamburgs. Our Games in big and Bantams were disappointing. As a whole, his criticisms sort of reached our "phunny-bone." We cannot take all he says as being of great value.

* * *

The man who knows enough about Wyandottes to feel safe in paying \$800 for a Partridge Wyandotte male generally breeds and exhibits good ones. An English fancier recently paid this price for a bird of this breed and variety and was handsomely pleased over it. Beefiness and big bone, general coarseness and clumsiness are foreign to the real Wyandotte of a fifth century ago—so we are told. A discussion of this subject would do great good and help to show some of the modern beef-Wyandotte fanciers the error of their efforts. Give us cobby, rounded Wyandottes!

* * *

W. Theo. Wittman has so strongly allied himself with Brown Leghorns that fanciers will be surprised to learn of his new loves, the Silver Pencilled Plymouth Rocks. They are handsome and of great use, and if this gentleman gives them the pushing that other

Don't Blame the Hens

for leaving their nests when sitting; for failing to lay their full number of eggs; for being thin and scrawny; for moulting badly. It is not their fault. As long as lice are permitted to "rule the roost"—infest their bodies, these conditions will prevail. The feeder will feed the flock very much as he would fill a leaky pail with water—at a great loss, and until the leak is stopped—until the hen is ridden of lice—can full return or profit be expected. It will take but a few minutes to turn these conditions into comfortable and profitable surroundings with

Lambert's

Death to Lice

You'll find a few cents invested in this efficient lice remedy will bring returns worth dollars. It not only rids the henneries and fowls of the pests but kills them and the mites outright. Put it on your sitting hens and watch how easy and contented they will rest. It cannot hurt eggs, chicks or hen. Equally good for all body lice on poultry, horses, cattle, dogs, hogs, plants. It's the poultry keeper's "friend in need." A fine powder easy to apply that goes direct to the skin through hair or feathers. Lambert's Ointment is splendid for head lice on young chickens. Sample box of either 10 cents post paid; 100 oz. Death to Lice by express \$1.00.

H. P. RANKIN, Box 61, Hartington, Neb.

varieties have received at his hands, they will be made popular, indeed. They are undoubtedly closely related to the same variety of Wyandottes, and the two will vie with each other their places in the hearts of fanciers.

* * *

And now the Pit Game fanciers are out of patience! They do not want the A. P. A. to say a thing about or make a standard for their beloved games. If we take the Pit Games into the Standard we shall then have to provide classification for the Hennies, Smokeballs, Black Devils, Willow Legs, Cuban Greys, Japs, Aseels, Muffs, Tassels, Hurricanes, Demons—and fifty other sub-varieties. The fanciers of Pit Games will have to be contented without having a classification in the Standard if the kicks of the cockers who fight chickens amount to anything! And there are a few chicken fighters left in the country yet.

A breeder who knows a thing or two was heard to say recently that "dark horses" in big hen shows were common these days—and from the number who get into the prize list at the leading shows it must be true. The time is passed when one man can get the whole thing for himself. This man need not be "losing his grip"—it is entirely probable that some one has been watching his methods and profited by it. "Dark horses" wake us up and put new fighting blood, as it were, in our veins.

* * *

The past season has been especially notable for its many high-class exhibitions of pure-bred fowls. Beginning with 10,000 birds at St. Louis, and then a line of early winter and late fall shows, to say nothing of the grand state and district fairs held in August, September and early October, comes the biggest state shows seen in years at the poultry center of each state. Chicago holds two shows and makes them both "go;" New York did the same; Boston holds a better show than in the last decade; the west gives out its donation in the Denver, Lincoln, Cedar Rapids, Topeka, Minneapolis and other displays, while the large eastern shows have never been so well patronized. The Pacific coast holds her full quota, and most every state in the Union holds from one to twenty smaller ones. All this poultry enthusiasm means a greater interest each season in pure-bred fowls—an enlarg-

ing of the business that is the life of the poultry fraternity. The more shows the better. We should hold them at better seasons than winter for larger attendance can be secured. The first of November will see many a good show inside of five years—as also will the last of February. We should have them and we will!

* * *

This show season is nearly over and those who have attended any number of good ones know what an impetus they have given the industry. The past year has been notable because of its wonderfully large exhibitions, but this season bids fair to eclipse it. Beginning in October at St. Louis, and the big cities holding two each, both successful, the season has been unparalleled. Boom prices have not been paid for new varieties, and the industry seems to be on a sound basis. We hear of less dissatisfaction among exhibitors than ever before. And there really is less—which means that judges are getting together. In every show-room fanciers and farmers are buying and selling, and "dark horses" are coming out after years of conscientious breeding to show what they have been producing. And thus the business is being built up and made sounder and more profitable.

* * *

There is a whole planet waiting to give its work to a man who can make a good photograph of a bird. We have some greatly esteemed artists who can use pen and ink, but mighty few real, live poultry photographers! A few good photographs and half-tones of fowls appear each winter, but we wait for the man who can and will use his camera the year 'round for the poultry men.

* * *

Mr. Robert Condee, of Los Angeles, has weathered his "Western Fancier" through the trials of getting it "on its legs," and we cannot but congratulate him on its tasty appearance. He is making it one of the leading journals on the Pacific coast. Genuine western energy and plenty of "go-after-it-hard" is doing wonders for the "Western Fancier."

* * *

E. O. Roessle, in an address before the New York Farmers' Club, said if you fill a hen's crop before ten o'clock in the morning, you simply introduce a fit of indigestion.

Mr. Homer Davenport made another grand display of oddities of the pheasant and pigeon tribe at the Madison Square show this year. This gentleman would make a champion of any breed he took hold of. It would make fanciers "go some" if he were to take up White Dottes or Barred Rocks, for instance! His grey, red and green jungle fowls drew much attention. These are supposed to be the origin of the domestic fowl of today. His green jungles came from Borneo, and many claim them the only ones in America today. The Crowned Pigeons of Madagascar and the Vulturine Pigeon from that same island are wonderful in their oddness. Plumage on these fowls is handsome, indeed. Impayan, Himalayan Monsul and Peacock pheasants were also showed from Mr. Davenport's farm. Mr. Davenport exhibited a royal line of the various varieties of pea fowls. His zeal in collecting these strange and handsome creatures increases yearly. As a fancier of odd birds he will soon become as famous as for his cartoons.

FEEDING SYSTEM.

Several readers of the AMERICAN POULTRY JOURNAL wrote me in regard to my system of feeding, saying some parts they could not understand as given on page 86, January number. One party asks how I get 15 pens to eat 34 quarts of mash. The 34 quarts of mash is fed to 300 fowls, 250 Leghorns and 50 White Wyandottes. Sometimes they do not eat quite all of it, but usually they do. And the reason I feed corn after the mash is fowls will eat whole corn when they will not any other grain. The 300 consume from 4 to 6 quarts of corn after eating all the mash they will. My experience is if we want plenty of eggs we must feed heavy. A great layer is always a good feeder. Those long bodied birds have a great capacity for eggs and food. Don't try to economize with the food. Be sure to feed enough.

W. C. COFFMAN.

Marinette, Wis.

Drevenstedt says the road to success in poultry keeping, which reaches the goal of profit, is not all smooth and level. Where the road is most difficult, the owner must drive, for personal observation is necessary to avoid rocks that wreck.

Prize Winners Profit Bringers

The Poultryman and the beginner in the business are certainly more interested in knowing about the profit-bringing qualities of incubators and brooders than they are in hearing about their prize winnings. And yet the fact that *Prairie State* machines have been so universally successful in winning prizes ought to prove their sterling *profit-bringing* qualities as nothing short of a thorough personal trial possibly can. In competition with almost every prominent machine on the market, before acknowledged expert judges, under the most rigid requirements, covering every point of construction and operation, *Prairie State* machines have carried off 326 first prizes.

PRAIRIE STATE Incubators and Brooders

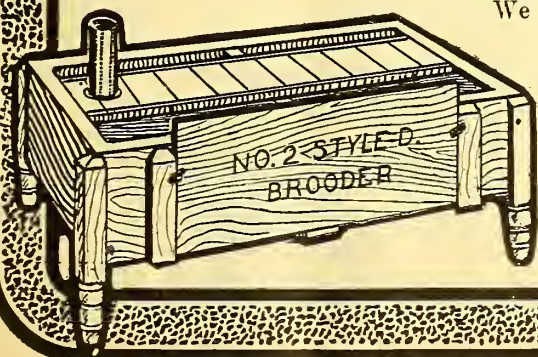

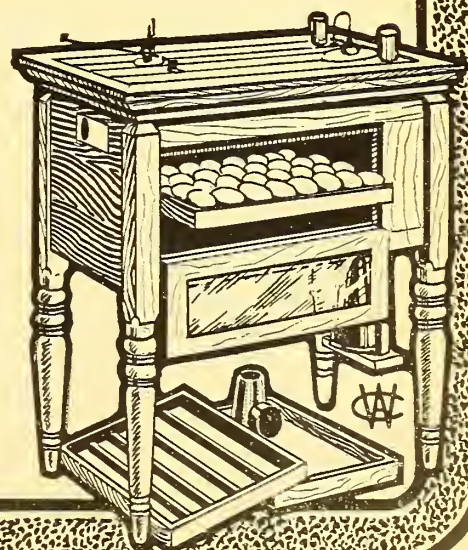

are *thoroughly practical, successful and profitable* machines to operate. They meet every requirement as no other machine does, and a personal trial will prove to you that all these prizes were justly bestowed. The construction of the machines—the materials used, the heating device and the means for regulating the heat, the moisture, the ventilation—all these points were carefully considered and severely tested by the judges, and found to excel all other devices for the artificial incubation and brooding of poultry.

But the thing that proves the most and pleases us best is that the foremost poultrymen of America, as well as of many foreign countries, have builded successful businesses through the aid of *Prairie State* machines, and are our most enthusiastic friends and largest customers. So, if history counts for anything, the beginner finds ample reason here why he should thoroughly investigate every claim made for our machines before he buys. To help you in this investigation we have just issued a new catalogue (facsimile of the cover is shown at top of this page) which sets forth the many reasons why *Prairie State* incubators and brooders are the best machines for you.

We mail it free upon request. Write for a copy today

HOMER CITY, PA.

The CHICAGO SHOW 1905.

The Ninth Annual Exhibition of the National Fanciers and Breeders Association was One of the best and Most Successful Ever Held in Chicago.

Reported by Thos. F. Rigg, Associate Editor American Poultry Journal.

Again have the exhibiting fanciers and breeders placed their seal of approval upon the management of the Chicago show.

The ninth annual exhibition of the National Fanciers' and Breeders' Association, January 23-28, was an unqualified success.

The Chicago show means the Chicago show.

The exhibition was held in the Coliseum Building. The great building was none too large to accommodate the entries tendered.

It was necessary to place the cat exhibit—more than 200 entries—upon the second floor in the Annex.

The show was splendidly cooped. The arrangement was most pleasing alike to exhibitors and visitors. The classification of the breeds and varieties was thoroughly systematized. The appearance presented was beautiful, and the unanimous verdict is that it was the best show, all things considered, ever held in Chicago.

The management of the detail in which the exhibitors are so much interested was warmly commended by all the exhibitors. There were no annoying delays in cooping specimens. Everything worked like clockwork. And this was a very pleasing feature to the men and women who were contestants.

Judging began promptly Tuesday forenoon, and the efficient corps of judges placed the awards satisfactorily upon the whole.

The quality of the stock shown was of the best, the leading fanciers of the nation here contesting for the high honors which winning at the Chicago show affords.

As a social function the exhibition was a pleasing success. Chicago show week is the holiday time for hundreds of fanciers who here annually meet and greatly enjoy themselves.

The display of pigeons was large, the noted lofts of the country being well represented.

The cat show, in the spacious room on the second floor, was a feature. The Beresford Cat Club and a Columbian Cat Club pooled their issues and gave one of the largest and best shows ever held in America.

Within view of all hung a banner,

"Chicago Show, January 24-29, 1906."

Every exhibitor and visiting fancier read that notice with pleasure and each was glad to say, "I will be there."

The attendance, although large, was cut short somewhat by reason of the severe weather of the early days of the week.

BARRED P. ROCKS.

One of the largest classes ever shown at Chicago, there being 120 specimens in the contest. In quality the classes were exceptionally good. In cockerels it was a close fight, and Judge Lambert found the placing of awards a very close matter so far as one, two and three were concerned. Here were cockerels that every Rock breeder present pronounced of rare merit. They were indeed marvels of beauty in color and form. In pullets the competition was of the very strongest character. The winner of first is a very near approach to a perfect gem. He was closely followed by several others. In cocks and hens there was abundance of quality, and the winners were specimens of great worth. There were birds in each class, while not winning, are worthy to stand in the front rank in any Barred Rock show.

BUFF PLYMOUTH ROCKS.

A showing of 121 Buff Rocks! That means there "is something doing." It was a strong showing and one which will do the Buff Rocks and their breeders a great deal of good. In every class there was quality along way down the line. The cockerel class was strong in its entirety. There were some wonderful productions shown in the pullets class. Hens and cocks were strong throughout.

WHITE P. ROCKS.

Forty-six White Rocks faced the judge. There was a number of birds of exceptional merit, chief among them being the first hen and first cockerel. An offer of \$100 was refused for this cockerel. Pullets and cocks were strong classes.

SILVER LACED WYANDOTTES.

It has become a settled fact that the Silver Laced Wyandotte exhibit at the Chicago show is the largest and best in America. This year there was no exception to the rule. Eighty-five silver beauties, many of them noted show birds of winning records and of great merit, were cooped here. It is but stating the truth when we say that the best S. L.

Wyandottes now shown in America as a whole were found here. The first cockerel was the winning cockerel at the World's Fair show. He is a magnificent bird as to color and shape. First and second cocks are the kind so much desired, but so seldom produced. In hens and pullets the judge found a problem in award making. Here were females of the correct color markings, being free from any brass and smut, and with the clear, pure white and black so much sought by all breeders of this variety. Many specimens of exceptional worth were, necessarily, outside the winning.

GOLDEN WYANDOTTES.

Another large class, there being 74 head cooped. Several of the most prominent breeders of the variety contested for the prizes. In each class the quality was of the best. Golden Wyandotte breeders have made a great deal of progress in color breeding during the past two years. They are, too, annually improving in shape of their birds, the game characteristics as to shape being nearly done away with.

WHITE WYANDOTTES.

Here, as they are in every show, the White Wyandottes were out in force, there being 117 head cooped. In each class the competition was very strong and the quality of the highest. A number of specimens changed hands at what would once have been called fabulous prices. It was a splendid showing of this very popular variety.

BUFF WYANDOTTES.

The largest class of Buff Wyandottes shown in Chicago for years, and of good quality throughout. It was conceded by all judges and breeders present who looked over the classes that the winning cockerel is the best Buff Wyandotte cockerel ever shown in America. He is buff of one even color from beak to feet. He is also of true Wyandotte shape. There were several other extra choice birds shown, among them being hens and pullets. The cock birds were very fine. It is such a showing of Buff Wyandottes as this that does the variety good.

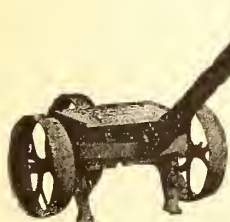

PARTRIDGE WYANDOTTES.

Fifty-eight Partridge Wyandottes made up one of the best displays of this variety ever cooped. In pullets were found some specimens which were marvels of beauty. In each of the classes birds of the highest type were plentiful, the plumage color in many cases being equal to that found on the best Partridge Cochins.

LIGHT BRAHMAS.

Some people have been saying that the Light Brahmas was "going out." Not so at the Chicago show. There were fifty-three in the classes, and among them some of the best ever shown in America. Nine Dark Brahmas were shown. It

Something
New

Strathmann's Poultry Yard Seeder

A machine any one that keeps a dozen chickens ought to have. The extra profits of same will pay for seeder in 1 year. Its weight is 30 lbs., hgt 9 ins., width, 18 ins., sows two rows 10 ins. apart and cultivates your ground. Will do what all poultrymen and journals say. Keep your chickens scratching. For sale by all leading poultry supply houses. Send for circular. No gearing, no levers; nothing to get out of order. Any boy or girl can operate same.

Strathmann Mfg. Co., 140 E. Fullerton Ave., Chicago, Ill.

To Distribute
Grain and Seeds
For Scratching
Fowls.

is unfortunate this beautiful and useful breed is not given better attention by fanciers and breeders.

THE COCHINS.

Forty-two Buff Cochins received the attention of all visitors. It was a strong class throughout. The winning hen is a wonderful specimen as to shape, and was the admiration of all Cochin lovers.

There was a small but beautiful showing of Partridge Cochins. A number of World's Fair winning specimens were shown.

White Cochins few in number, but of good quality.

THE LEGHORNS.

S. C. White, 65; S. C. Brown, 52; R. C. White, 44; R. C. Brown, 20; S. C. Buff, 20, and R. C. Buff, 3.

It was a strong showing of Leghorns, and several of the noted birds of the country were cooped. Messrs. Butterfield and Burgott, judges, informed us that the quality in all classes was very good.

THE MINORCAS.

In S. C. Black Minorcas there was a battle royal. The quality averaged high and some extra choice specimens were shown.

The fifty White Minorcas presented a very pretty sight and was the cause of a number of people becoming White Minorca fanciers. They were one of the most attractive classes in the exhibition. In all that goes to make up a Minorca they were more than good.

THE ORPINGTONS.

As usual, the Orpingtons were out in full force, the S. C. Buffs leading in numbers. The Buffs are becoming better every year in color and there were a number of solid buff birds. They seem to be on the gain in public favor and are among our most popular show birds. The showing of R. C. Buffs, Whites and Blacks was small, but the quality was good.

GAMES—VARIOUS.

There is not the showing in Standard games in the west that there used to be. Once upon a time Chicago was famous for its game entries, both in number and quality. The classes here were fairly well filled with several specimens of great worth.

Twenty-two Cornish Indians were cooped and among them were some of the best ever shown at Chicago.

OTHER BREEDS AND VARIETIES.

Where are the Black Langshan breed-

ers who used to come to Chicago in force? Just eleven of the stately black beauties graced the show pens. Seven Whites were thus near neighbors.

Only seven Houdans were shown.

There was a fair showing of S. C. R. I. Reds and about a like number of R. C. Reds. Many specimens were of the kind Red breeders are seeking.

Polish and Black Spanish were fairly well represented in numbers. Some of the best W. C. B. Polish ever shown in Chicago were among the lot.

Hamburgs were small in number but of good quality.

Columbian Wyandottes attracted no little attention. There is a boom ahead for this variety.

The Partridge Plymouth Rocks held a reception continually. They seem to have made a decided hit.

There were some magnificent Blue Andalusians shown—not as many as there should have been. It is a beautiful and useful breed.

NOTES OF THE SHOW.

A winner!

Now for the next Chicago show, January 24-29, 1906.

Mr. Fred L. Kimmey again proved conclusively that he can handle the details of a great show to the entire satisfaction of all exhibitors.

Superintendent of Poultry E. B. Eddy was upon the floor day and night seeing to it that all went well. And all did go well.

Superintendent of Pigeons, the genial K. J. Muir, was the right man in the right place. His work was of the very best.

Thomas Howard handled the dog department to the satisfaction of all concerned.

Prof. E. L. C. Morse, who has done more to advance the interest of Blue Andalusians than has any other breeder in America, showed a string of his winning strain. They are winners at Cleveland, Chicago and wherever shown.

The Black Javanese Bantams shown by Frank W. Radford were very fine specimens of this rare and beautiful variety.

U. J. Shanklin has become so used to winning with his Partridge Cochins that he is not surprised when he takes a big share of the good things offered. His stock is eagerly sought by Cochin breeders in every state in the Union.

Brent & Eddy showed some exceptionally good Cornish Indian pullets and cockerels. They have color markings down to a nicety and have been careful to secure correct shape.

When one hears of Buff Leghorns they first think of Geo. S. Barnes. Mr. Barnes has bred as many extra good Buff Leghorns as any man in America. His stock is always in the winning at New York, Chicago, etc. He has done good work for the variety and for any man who breeds them, as secretary of the National Buff Leghorn Club. There is no better or more careful breeder than Geo. S. Barnes.

Nate N. Cornwall did here what he usually does in Buff Leghorn alley—secure his full share of the winning ribbons. Mr. Cornwall has produced many of the winners at the leading shows for several years. He knows how to get the color and shape and to keep on getting it. He devotes all his time to the one variety.

C. H. Collins showed a cockerel and pullet in the Buff Leghorn contest that were beauties.

W. H. Wiebke has given his best efforts to the production of S. C. Brown Leghorns and has succeeded in giving to the fancier some of the best specimens of this variety ever produced. His string of Brown Beauties attracted all lovers of the Leghorn.

J. A. Leland's R. C. White Leghorns were most favorably received by all breeders interested in this now popular variety who had the pleasure of looking over the proud display made here. They are typical Leghorns.

The Studebaker Model Farm S. C. White Leghorns were out in full force.

A. B. Kaye made a big showing in S. C. Black Minorcas. The quality was there, also. The Kaye Minorcas are greatly admired by all lovers of this popular breed.

White Leghorn Poultry Yards filled several coops with their good S. C. White Leghorns. This firm tries conclusions with all the leading White Leghorn breeders in America and never fails to win their share of prizes.

A. Didriksen made a small entry in S. C. Black Minorcas. The quality was there, however, notwithstanding the small entry.

Dr. S. A. McWilliams is expected to do a great deal of winning wherever he

New Steel Roofing and Siding \$2.00 per 100 Sq. Ft.

Painted red on both sides. Most durable and economical covering for Roofing, Siding or Ceiling for Residences, Houses, Barns, Sheds, Elevators, Stores, Churches, Poultry Houses, Cribbs, etc. Easier to lay and will last longer than any other covering. Cheaper than shingles or slate. No experience necessary. A hammer or hatchet the only tools needed. It is semi-hardened high grade steel. \$2.00 is our price for the flat. Corrugated as shown in cut, or "V" crimped or standing seam costs \$2.10 per 100 square feet. We offer Pressed Brick Siding and Beaded Ceiling or Siding at \$2.25 per 100 Square Feet. Thousands of buildings throughout the world are covered with this steel roofing and siding, making their buildings

FIRE, WATER AND LIGHTNING PROOF.

Send in your order for as many squares as you may need to cover your new or old building. Time will prove its enduring qualities. Withstands the elements, best of all roofings. At prices noted in this advertisement.

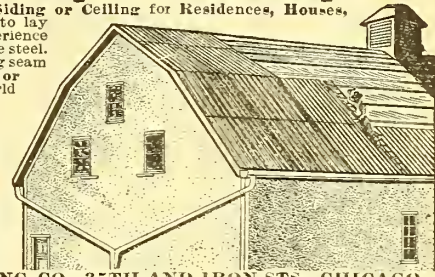

WE PAY THE FREIGHT

to all points East of Colorado, except Indian Territory, Oklahoma and Texas. Write for prices for shipment to such points. Ask for further particulars. Immediate shipment No. K-188 tells all about this roofing. It also quotes low prices on Building Material, Wire, Pipe, Plumbing, Wash, Doors, Furniture, Household Goods. Down spouting, Eave Trough and thousands of other items bought by us at Sheriff's and Receiver's Sales.

CHICAGO HOUSE WRECKING CO., 35TH AND IRON STS., CHICAGO.

If you mail us your order at once. Satisfaction guaranteed or money refunded. Our Special Catalogue No. K-188 tells all about this roofing. It also quotes low prices on Building Material, Wire, Pipe, Plumbing, Wash, Doors, Furniture, Household Goods. Down spouting, Eave Trough and thousands of other items bought by us at Sheriff's and Receiver's Sales.

THE ELGIN KING STRAIN OF SINGLE COMB WHITE LEGHORNS

Winners again at the Elgin Show, December, 1904. Won 1st cockerel, scored 95; 1st pullet, 95½; 1st hen, 95; 1st pen, 190 by Chas. McClave. Cockerels, pullets and yearling hens for sale. Eggs for hatching. Write for catalogue and mention A. P. J.

W. L. FERN

ELGIN KING POULTRY PLANT

Elgin, Illinois

enters the White Minorca contest, and he never disappoints his friends. He made a large display of his magnificent birds. It was one of the most attractive displays in the entire show.

F. C. Bailey showed a string of his winning R. C. White Orpingtons. He has no superior as a breeder of good Whites.

C. S. Byers cooped some of his S. C. Buff Orpingtons and did as he always does—showed good ones. He knows how to breed that kind.

W. R. Wooden had the sensational bird of the show—his first Buff Wyandotte cockerel. This bird is very close to perfect Wyandotte shape and in color is a marvel. He attracted a great deal of attention. Mr. Wooden also had some of the extra choice kind in the other Buff Wyandotte classes—of course. In Buff Rocks he had a number of the kind all the boys want.

S. D. Lapham made a large Buff Rock entry and among them some of the best Buff Rocks so far produced.

John J. Keig & Sons made a nice showing in Buff Rocks.

A few years ago the writer was in Mazon, Ill. A resident of the town, a business man, said: "Whatever Dr. Bennett does he does well." This is true of Dr. O. P. Bennett. When he was breeding Buff Rocks he bred them well—so well that he became the leader and went to the New York show and carried away about all the prizes offered. He has taken up Barred Rocks. He will breed them well. His first prize pullet was the center of attraction in Barred Rock alley. His winnings in this, one of the best Rock shows ever put forth in America, were: 1 pullet; 2 cock; 2 hen; 3 cockerel; 2 pen. Dr. Bennett's neighbor was right—what Dr. Bennett does he does well.

Barred Rock breeders and exhibitors except R. E. Haeger & Co. to show birds of rare good quality and to be winners. And they are never disappointed. The showing made by this firm in this very warm contest is a record any Rock breeder may be excused for envying. It is a great record. These gentlemen deserve it all, because they "had the goods." Their birds were the admiration of all breeders present. Note their winnings.

B. F. Weymer, of Exmoor Poultry

**For harness galls and sores
Pratts Vet. Healing Ointment.**

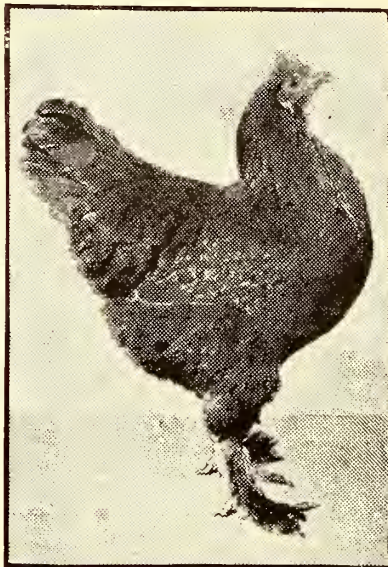

Made by Pratt Food Co., Phila. Over 30 years old.

Farms, has been coming to Chicago of late years and winning his share of prizes on Barred Rocks in the hottest kind of competition. He repeated his work again, and deserves all he got. He has a magnificent strain of Barred Rocks.

Chas. H. Ring entered five White Rocks and won four first prizes. How is that for a record? His winning hen is one of the best ever shown in America.

Dr. W. A. Crum put in three of his White Rocks just to keep the boys guessing.

Elmer B. McGaw showed a number of extra good S. C. R. I. Reds.

BLACK LANGSHAN

First prize hen at World's Fair. Bred and owned by J. E. Chilton, Dallas, Tex.

Ackley & Page were present with a number of their Buff Wyandottes. This means that all the other Buff Wyandotte exhibitors had a hard proposition to face. This firm were big winners at the World's Fair. They win always wherever they show. They have that kind of stock.

B. F. Hislop was well represented in the Golden Wyandotte section. He showed, as he always does, Golden's of the very highest order of merit.

R. E. Jones made a big winning in Silver Laced Wyandottes. His first cock and winning females are certainly the kind that breeders are striving so hard

to produce. In White and Golden Wyandottes he made large entries and won many prizes.

Ira C. Keller showed a number of his superb Golden Wyandottes. Keller's Golden's were winners at World's Fair and annually win in New York, Chicago and other leading shows.

Dr. C. M. Baskerville made a nice showing of a few of his good Partridge Wyandottes.

W. A. Doolittle had on show a large string of his noted Partridge Wyandottes. Mr. Doolittle stands well to the head among Partridge Wyandotte breeders. His strain wins annually in all the leading shows east and west. He won the majority of prizes at the World's Fair.

Dr. Gaskin & Co. entered two cockerels and won second cockerel. This strain has won at Indianapolis and Chicago.

Emma B. Poultry Farm made a good showing of White Wyandottes of extra good quality.

Clarence Ward helped to make the White Wyandotte class one of rare merit.

C. L. Duffield contributed a number of his extra choice Partridge Cochins to the magnificent display of this breed.

J. C. Stewart sent up a number of his winning Light Brahmas. Mr. Stewart has established a strain strong in wing and back and tail color. Last month his stock secured from 92 to 94½ in the show room at Monmouth, Ill.

Mrs. Fred L. Kimmey exhibited a number of her black beauties—African Bantams. She made a clean sweep in each class.

The Hon. Dave Nichols, Shelton, Conn., statesman, philanthropist, judge, fancier and gentleman, traveled the long distance to enjoy the delights of the Chicago show.

Talk about a man carrying a mountain of trouble and still being cheerful, pleasant and square on his pins all the time. Fred L. Kimmey is now president of a cat club!

INCUBATORS, APPLIANCES AND FOODS.

Manufacturers of incubators, foods, etc., appreciate the value of showing here, and as usual practically all space within the power of the management to let was occupied. The following was the line-up:

Cyphers Incubator Co. Model incubator, Axford Incubator, Cornell incubator, Humphrey bone mill and brooder, Ormas incubator, Geo. L. Harding's food supplies, J. W. Miller Co. Mathews' pest-proof coop.

The following journals were represented: Reliable, AMERICAN POULTRY JOURNAL, Successful, Poultry, Inland

 2d hen, 1st, 2d pullet, 1st pen, Gazette and two other
 specials.
 Chicago, December, 1903, 1st cock, 1st, 3d, 4th hen, 1st
 pen, \$25 cup display.
 Chicago, December, 1904, 1st, 2d, 3d, 4th cock; 1st, 2d,
 3d, 4th, 5th hen; 1st, 2d, 3d cockerel; 1st, 2d, 4th pullet,
 1st pen; cup for display and all specials.

Ackle & Page Strain Is
BEST

We raise our prize winners. We raise more Buff
 Wyandottes than any two breeders combined. We
 claim our strain is BEST, and prove this statement
 by competition at the largest shows. It costs no more
 to come to us and get stock that will benefit you than
 to purchase the "just as good."

Best Display, Chicago, December, 1903

World's Greatest Exhibition, St. Louis, 1904

1st Hen, Chicago, Dec. '03

On eight entries we won 1st cock, 2d cock, 3d hen, 6th cockerel, 6th pen, an unequaled winning and
 remarkable victory over all competitors in the best class of Buff Wyandottes ever shown. **More and better stock**
for sale than ever before. The Buff Wyandottes are the best general purpose breed; best layers, mature quickly
 and best to look at. Our prices are reasonable and our stock is best. We solicit inquiries. Catalogue free. We please
 or return your money. Please write us to-day.

Burr incubators and brooders are more popular this year than ever before for the simple reason that they have given universal satisfaction. People who use them are loud in their praise of the wonderful results accomplished. The company has thousands of letters from satisfied customers telling of the good luck they had with chickens hatched and raised in Burr incubators and brooders. One of the chief reasons for Burr machines giving such general satisfaction is their wonderful simplicity. It is so easy to operate them that even the beginner succeeds. Only experts can operate machines with complicated devices, but in the Burr everything has been simplified with the idea of producing an incubator and brooder that the busy farmer's wife can operate with success. Burr incubators and brooders are all sold on the thirty day trial plan. That is, a customer takes the machines and runs them for thirty days and if at the end of that time they are unsatisfactory they can be returned, when the money will be refunded. Anyone thinking of purchasing an incubator or brooder this season should write at once to the Burr Incubator Co., Omaha, Neb., for their free illustrated catalog, which tells all about the construction and operation of these exceedingly popular machines.

E. E. Pifer, Palestine, Ill., proprietor of the Glen Dale Farm, reports the following winnings on his birds at the Palestine show Jan. 11-14, 1905: Brahmas, 1st, 2d, 3d cockerel; 1st, 2d pullet; 1st cock; 1st, 2d hen; 1st pen. White Holland Turkeys, 1st, 2d, 3d, 4th cockerels; 1st, 2d, 3d pullets. He has some fine turkeys for sale, also a few Brahmas and Guineas left.

Kills chicken lice and mites Pratts Liquid Lice Killer.

HAWKEYE SPECIAL INCUBATORS.

In a preceding issue of this paper the announcement was made of a new machine recently added to the well known line of incubators and brooders manufactured by the Hawkeye Incubator Co., Newton, Iowa, known as the Hawkeye Special Incubator. A great deal of interest has been aroused among poultry raisers on account of the new principles of incubator construction embodied in this Hawkeye special.

This is owing to the increased efficiency of the new machine. In response to numerous inquiries we publish for the first time an interior view of this incubator, showing clearly of what these improvements consist.

The illustration herewith shows the Hawkeye Special Incubator with the top removed and the copper pipe heating system in position. This machine, as well as the complete line manufactured by the Hawkeye Company, is heated by hot water on an

entirely different principle from any other machine, and the pipes and heating boiler are constructed throughout of heavy cold rolled copper, making a heating system which will last for twenty years. By following the arrows in the illustration it will be noticed that the circulation of water from the heating boiler is both front and back near the side walls of the case. This is a very different thing from a pipe encircling the egg chamber, as the water is bound to be cooler on its return to the boiler. In the Hawkeye Patented Heating System this condition has been solved so that now an absolutely even temperature over every egg is assured. Pipes "C," direct from the heating boiler, carry the water to the extreme lamp end of machine, where it is retarded through the reduced return pipe indicated as "D." This plan of retarding the water opposite the lamp

offsets the heat lost by the water in traveling to this point, thus giving the same heat near all four walls. The return pipe "D" carrying the water across the center of the egg chamber is of sufficient size to keep the boiler supplied with cold water.

Here is an improvement used on the Hawkeye—the heating boiler, which is built throughout of heavy 12-oz. sheet copper, the same as the pipes of the egg chamber. This makes a heating system that will do twenty years' good service. The construction of this boiler utilizes all the heat created by the lamp without any back pressure on the burner or oil fount, which is the cause, many times, of smoky lamps. Careful tests of this heating system have been found to mean a saving of 50 per cent of the oil ordinarily used while operating through a hatch. Such great confidence have the Hawkeye Company in this Special Incubator that they send it anywhere on thirty days' approval, giving every purchaser a chance to take off a trial hatch. They have a new Quick Delivery Plan which is proving very popular.

The business methods of this company in the past have been open and above board. They manufacture nothing but the highest grade of machines and we predict an ever increasing demand for their goods among those seeking the best.

The catalogue of Hawkeye Incubators and Brooders, recently received from the printers, gives full particulars regarding their special advertising and profit-sharing offer and may be had free on request. This book is well worth having, as it contains invaluable advice to every poultry raiser. Address: Hawkeye Incubator Co., Box 2, Newton, Iowa.

Mrs. U. R. Fishel of Hope, Ind., is certainly having great success in the raising of Bronze Turkeys. She sent eighteen turkeys to Madison Square and won eighteen prizes Jan. 17, 1905, as follows: Two 1sts, five 2ds, six 3ds, five 4ths. At the St. Louis Show she won three 1sts, two 2ds, one 3d, two 4ths, two 5ths, two 6ths, two 7ths and silver cup for best display. What better proofs does one want as to the quality of Mrs. Fishel's turkeys? She has mated up twelve different flocks, each one headed by a prize winning Tom, six World's Fair winners and six New York winners, all hens being of the very best, among which are over thirty prize winners.

W. R. Curtiss & Co., proprietors of Niagara Farm, Ransomville, N. Y., have an important announcement in this issue. They breed White Wyandottes, S. C. W. Leghorns and Mammoth Pekin Ducks. They have stock for sale and can supply eggs after April 1. They can supply readers of the AMERICAN POULTRY JOURNAL with males or females in large or small lots at low prices. Their stock is bred for business, but they win at such shows as St. Louis, Madison Square, Chicago, etc. In addition to this they are headquarters for Cut Clover and Poultry Supplies. As an idea of the magnitude of their business we will state that they have 2,500 breeders for sale.

Eggs For Hatching

FROM PRIZE WINNING

SINGLE
COMB

WHITE LEGHORNS

Exhibited at Madison Square Poultry Show, New York City.

A GAIN we were prize winners at the 1905 Poultry show in New York. At the Coliseum, Chicago Poultry Show, we were successful, winning the following prizes: 1st and 5th cock, 1st and 4th chl., 2d and 5th hen. All of our prize winners were from our own stock. We shall have eggs for hatching for sale from these prize winning matings. If you wish to breed prize winning stock, write us at once, and get prices of eggs for hatching from these special pens.

Eggs for hatching from special mated pens of heavy egg producing strain, \$2 per 15, \$5 per 45; \$8 per 100, \$70 per 1000.

CHOICE BREEDING COCKERELS

We have for sale about 200 extra choice breeding cockerels at very reasonable prices. These birds have particularly fine plumage, carriage and head points. Their ancestors for generations have won prizes in all the shows in the United States. On request we will mate up for the purchaser trios or pens, which will produce the very best results. If you need birds for breeding or eggs for hatching, write us at once for description and prices.

P. Harold Hayes, Buffalo, N. Y.

READ BEFORE THE PENINSULAR HORTICULTURAL SOCIETY, JAN. 18, 1905.

Tree Breeding and Tree Growing.

The subject assigned me is one of importance at this time when every fruit grower is eager for the best strain of varieties. It was Delaware and Maryland orchards that made the reputation years ago for fine fruit, they are to-day being replaced and fruit is now grown with equally as good quality as ever in the past.

This Peninsula was first known for its fine fruit and the reputation made by our forefathers should be maintained and can be by the fruit grower who has grit, and push to select and breed from the start.

From a conservative estimate I believe there has been planted the past year more than four hundred thousand trees on the eastern shore of Maryland and Delaware by the best fruit growers.

Why are our growers able to plant

produced best and bud from them. I understand he has followed that system and has made a success. When I was in Toledo last summer I found his goods on the market there from his plant in Texas. I am informed he will plant one hundred thousand Elberta peach trees alone. This looks like peach growing from a lesson learned from tree breeding.

During the last fruiting season I was in twenty different states and more than one hundred orchards. When at Ft. Valley, Ga., in June, at Mr. Hale's place, he gave us a side-show for only a few minutes when he demonstrated what could be done in handling different varieties from the tree to the refrigerator car from a large field of trees. Many varieties have been discarded and other varieties budded as they proved unprofitable. He had been able by close observation to see the ones that earned their expenses.

I was at Marshallville, Ga., on the spot where the famous Elberta peach was originated. There the original spot of land is planted to Elberta the second time. Cross-pollenization produced this famous peach and the originator is a large peach grower from the results.

In West Virginia, the Miller Brothers started growing in a small way from seeing varieties that proved of value and have practiced so far as possible tree breeding or cutting buds from their best trees and are to-day the largest growers in the East.

In Maryland we have many growers who value the strain of varieties in the orchard of value. If tree breeding is to be practiced to any great extent, it must be with the closest co-operation between the orchardist and fruit growers, by marking the trees, feeding them well to make sufficient wood growth for buds.

TO GROW A TREE.

To grow a tree is much like the development of a business and its financial success depends very much on the same kind of treatment. To being with the article upon which the business is based must be good.

The class of customers should be suitable, so should the seed be the best produced and the soil in a fit condition to receive it.

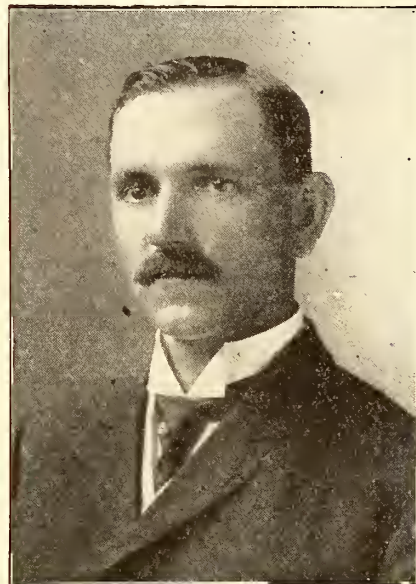

The care of business must be thorough and careful, so must the care and cultivation of a tree. A business that does not grow and develop continually loses its vitality and often dies, so does the tree that does not grow from the lack of proper care begins to droop and die.

Tree-growing from the nurseryman's stand-point has increased many times in the past ten years, and to-day they are grown with more watchful care and the growing of trees has developed in a large business on the Peninsula, the soil and climate is right and the trees grow well.

No growth however, can be systematical and solid if care is not taken to cultivate the soil and prevent diseases. Its adaptability to every state accounts for the universal demand.

To-day hundreds of thousands of trees sprouted on the eastern shore are planted in every state and territory as well as in Canada and their growth is quite rapid and systematical as ever, so not only the fruit is grown but the trees as well. When it comes to tree breeding and tree growing, stay where you are on the Eastern shore and plant an orchard and improve your opportunities.

ORLANDO HARRISON.

ORLANDO HARRISON.

now as they have not for twenty years or more? This question is unanswered in part.

The master of the Delaware State Grange, in a recent horticultural meeting held in Pennsylvania, said: "Much credit is due the nurseryman for this by more careful selection of peach seed." Others contribute success to small orchards scattered over the greater acreage. Now that this second planting is being done, most of the planters to-day on this Peninsula have had some experience in varieties and the different strains of varieties.

Some years ago there was much said about the Reeve's favorite being such a shy bearer. To-day we do not hear that complaint by many. I planted some Reeve's favorite ten years ago to cut buds from and they have had annual crops of fine fruit.

I was in Mr. Morrill's orchard in Michigan some eight years ago, when he went over the orchard he emphasized that certain varieties had paid him much better than others and he thoroughly believed in the breeding system of varieties, that is he would select the trees that

DUSTON'S NEW FARM.

Illustrations and Description of Arthur G. Duston's New Farm at So. Framingham, Mass.

Our readers know that Arthur G. Duston, the White Wyandotte man, formerly of Marlboro, Mass., recently moved to So. Framingham, Mass., securing a larger plant and better facilities for his growing business.

There is a little story regarding his new farm of interest to readers.

The accompanying photos were recently taken for AMERICAN POULTRY JOURNAL.

No. 1 is a pullet which Mr. Duston believes cannot be beaten for shape as a Wyandotte. This was taken in November, and Mr. Duston has fitted her for one of the strongest exhibitions in the country, and believes she will give a good account of herself. Our readers and all those interested in White Wyandottes will appreciate that this

rather a model. Certainly they are for business, and not for looks.

Having moved onto an old place, of course many things have had to be done during the first year which have taken time, but will not count for very much; but another season he hopes to do quite a little in the way of building and improving his place.

He has what is known as one of the best grass farms in this section, and naturally put stock enough, in the shape of thoroughbred Guernseys, to eat it up, thus bringing his place up and getting some revenue from his cows.

He believes he will make a more marked improvement in his stock the coming year than he has been able to make in several years, inasmuch as he is just living with his birds, and shall know the individual characteristics and merits of each specimen that he puts into his pens. He believes it is a good deal to know the disposition of the birds, and to have seen them round out from chickenhood.

The bird in illustration No. 1 shows for itself, its depth of body, close clean

PETALUMA GETS THE GOLD MEDAL.

Owing to the unfortunate controversy between the National Commission and the Exposition authorities, the official announcements of awards in many cases were long delayed. The official notice has now been issued, however, and the Petaluma Incubator Company of Petaluma, Cal., receives the Gold Medal on their Petaluma Incubators and Brooders, as exhibited at the Louisiana Purchase Exposition. It came over the signature of J. A. Filcher, Commissioner, who warmly congratulated the Petaluma Company upon the excellence of their machines. This is a high honor from high authority. It must be remembered that the Board of Judges, as well as the exhibits, was international in character. Foreign judges assisted in making the awards, and foreign machines, as well as all leading makes in our country, were in competition. It must serve to confirm the opinion already held by a great army of users that the Petaluma Incubators and Brooders are unexcelled.

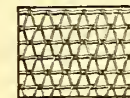

W. H. Wiebke of Fort Wayne, Ind., sent his Single Comb Brown Leghorns to Madison Square Garden, in January, 1905, and won as follows: 1st cock, 3d pullet. The cock was an elegantly marked, good, well finished bird of sound color, and an easy winner, strong in head points. The pullet had the rich golden penciling and fine Leghorn shape. The cockerel that he sent, not placed, was a beautiful Leghorn and a sure winner in most shows. Of course the competition at Madison Square is very strong.

JOHN BAUSCHER, Jr., Box 130 Freeport, Ill.

Scenes on the farm of Arthur G. Duston, So. Framingham, Mass.

is something exceptional in shape, and believe it to be what would be termed an advanced copy of what the new standard will call for.

No. 2 is a coop of a few pullets and cockerels. This was taken just at night and shows somewhat dark, and as the birds are a little timid, they do not show to best advantage. But it is an easy matter for one acquainted with the taking of pictures to figure out how difficult it is to make a good snap shot of a coop of chickens.

No. 3 is a photograph of Mr. Duston's home, taken from the southeastern exposure. This huge elm is probably one of the largest in this section, and is given credit as being the largest. It is a tremendous specimen. He has fifty acres of land, about thirty of it being tillage, and ten acres or so of pasture, the balance woodland.

Back of the house to the east, with a fine southern exposure, is a slope on which he is going to erect his poultry buildings. He has five fifty foot ones, which were started the first of November, and will erect seventeen of this same kind of house, being twelve feet wide, five pens, six feet in front, five feet in the rear, double pitched, one short roof, and a long roof to the north. He will have something in these that is going to be

comb, standing low, especially well-spread tail and full cushion, and short, flat back. He considers her a marvel, and the artist had to walk all over the field to get anywhere near her, and then, as you see, she was so far away that it was impossible to get the very best view of her.

This is to certify that we have sold to Mr. F. C. Tabor, of Worcester, N. Y., all the R. C. Brown Leghorn females shown by us and winning prizes at the World's Fair, St. Louis, Oct. 21 to Nov. 5, 1904.

Trusting this will be satisfactory and that the birds will be all that you expect, we are, yours truly,

STEINMESCH FEED & POULTRY SUPPLY CO.

A. Steinmesch, President.

The Emma B. Poultry Farm, of which S. E. Lane is superintendent, at Gurnee, Lake county, Ill., is offering this month 300 fine breeding Barred Rock hens at a wonderfully small price, especially if the whole lot is taken by one man. This is an opportunity that will not often occur. The well known quality of the stock on the Emma B. Poultry Farm is in itself a guarantee of the value received, and AMERICAN POULTRY JOURNAL readers should look up this offer.

Joe Farmer, Flushing, Ohio, is offering his poultry farm for sale. This farm is known all over the United States and into foreign lands and has been the home of thousands of Barred Rocks in the past twenty-one years. Mr. Farmer is now in his 70th year and poor health compels him to give up active work. Write him for prices and particulars.

Cyphers Incubator Co.

Grant M. Curtis, President.
Buffalo, New York, U. S. A.

22 GOLD AND SILVER MEDALS

have been awarded the **Genuine Patent-diaphragm, Non-moisture, Self-ventilating and Self-regulating Cyphers Incubators** in 12 different countries, within the last fifty months. Our latest triumph was at the **WORLD'S FAIR** (Louisiana Purchase Exposition) St. Louis, Missouri, U. S. A., October 12, 1904. A "practically perfect Incubator" was what the

International Jury of Awards,

(English, German, French and American) pronounced the Standard Cyphers, 1905 pattern, for it was on this basis that the **GOLD MEDAL** (the highest award on incubators and brooders) was awarded under the Exposition rules. Note also that we won the **Gold Medal** at the Pan-American Exposition.

The Sample Medals shown on this and the opposite page—medals won by Cyphers Incubators and Brooders in the foremost civilized countries on the globe—represent just so many reasons (a victory in each country!) in support of our claim that incubators of this company's manufacture are now widely recognized as

"The World's Standard Hatchers."

Another convincing reason for this claim is the almost universal adoption of this company's make of incubators and brooders by the **Government experiment farms of 46 different countries, states and provinces** in all parts of the world—a record not approached by any other make of incubator or line of brooders manufactured in this or any other country. These **Government experiment farms** are established and conducted for purposes of **public instruction**. To satisfactorily instruct their thousands of students, they must have the best of everything with which to work—the best instructors, the best animals or breeding stock, the best seeds, etc. The instructors on these farms have themselves studied hard and long; the animals have been well-bred and the seeds have been improved year after year by the selection of the best. **Can you doubt** that the **Genuine Standard Cyphers Incubators and Brooders** are the best when they are used and publicly endorsed by these Government experiment farms, located in all parts of the civilized world? **To do their best work in their chosen field**, to satisfactorily instruct their students, these institutions must secure and use the **best incubators and brooders**. Our 228-page catalogue for 1905 contains the personally signed endorsements of the managers and poultrymen on these public institutions—see opposite page.

1905 PATTERN STANDARD CYPHERS.

Notwithstanding our enviable position at the front, we do not stand still, in evidence of which the attention of the experienced operator is called to the following condensed summary of important improvements embodied in the **1905 pattern Standard Cyphers Incubators**:

1. A right angle lamp support, attachable without screws, self-locking, and which cannot be misplaced.
2. A rigid-bowl, seamless bottom lamp that will not "buckle" and cannot leak.
3. A solderless heater of heavy galvanized iron tightly riveted to light-weight, gray iron castings, and guaranteed smoke-proof.
4. Mechanically perfected quadruple action Thermostat, with increased power and more sensitive bearings.
5. Removable top diaphragm, so that upper felt can be dusted, cleaned, aired and easily replaced, should occasion demand.
6. "Split" or double lower diaphragm, so that burlap chick nursery floor can be removed, washed, aired, replaced and space between burlap and felt readily cleaned.
7. Positively uniform ventilation and equable temperature in all parts of the hatching chamber.
8. Better **Materials**, because more carefully selected, and better **Workmanship** because more critically supervised.

REDUCTION IN PRICES

Not only have we improved these Standard Hatching Machines, especially in their mechanical construction, and in the quality of materials used, but we have accomplished an important saving in the **cost of manufacture** by increasing our plant, introducing labor-saving machinery, buying in larger quantities, taking advantage of all cash discounts and greatly enlarging our out-put. **In keeping with this company's new policy**, (see January advertisement, this journal,) we now offer our customers, in the shape of reduced prices, the large savings we have accomplished lately in the manufacture of our goods. For the season of 1905, regardless of consequences,

Our \$14, 60-egg size incubator will be sold for \$12.00.
Our \$20, 120-egg size incubator for - - - \$17.00.
Our \$29, 220-egg size incubator for - - - \$24.00.
Our \$37, 360-egg size incubator for - - - \$30.00.
Our \$58, 440-egg size double-decker for - - \$48.00.
Our \$78, 720-egg size double-decker for - - \$60.00.

In addition to the foregoing we are offering for 1905 two special, low-priced incubators at \$10.00 and \$6.50 each, the **Farm-Economy** (100-egg capacity) and "**Boy's Choice**" (50-egg capacity,) respectively; also two new styles of brooders, the **Storm King Outdoor Brooder**, two sizes, which sell at \$6.00 and \$8.00 each, holding 50 and 100 chicks respectively, and the **Hare-Curtis Hygienic Brooder**, a new departure in brooder construction that we believe will prove a great boon to poultrymen—see opposite page.

Cyphers Incubator Co.

Grant M. Curtis, President.

Buffalo, New York, U. S. A.

"Poultry Requisites" now manufactured by this company embrace more than sixty useful articles needed by up-to-date and progressive poultrymen. These are articles it pays to use. They are not foolish trinkets, worthless by-products nor harmful concoctions. Every appliance we make is of practical value, built of high grade materials and mechanically constructed. Every poultry food produced by us is scientifically balanced and composed of sound, wholesome grains—each selected for the purpose, not a

gathering together of waste products. Every insecticide, disinfectant and remedy we sell is put up by medical and chemical experts, for the specific purpose, and is guaranteed to be efficacious. **Positively Every Article** we list on this page is manufactured in our own factory, mills or laboratory. We

know, therefore, all about what goes into these goods and are in a position to guarantee their quality as to workmanship and their purity as to ingredients. We manufacture practically every article the earnest poultryman needs with which to achieve the maximum of success, and he can equip and conduct his poultry plant small or large, first to last, with Cyphers Company goods. He can buy every article he needs in this line from the same source and thus make sure of obtaining the best goods at the lowest possible prices, not only on his original purchase, but also on later orders.

We Make a Specialty of Complete Outfits for poultry plants, including plans for buildings and yards, all necessary equipment and every article required for best results. You can buy from us everything you need from a "Book of Plans" to the breeding stock or eggs for batching, and will obtain superior goods, at lowest prices, and receive prompt and courteous treatment. See our list of "free books to customers," page 45 of our main catalogue, which include "Poultry Plant Construction," "Hints to Aid the Beginner," "Profitable Poultry Feeding" and "Directions for Operating Standard Cyphers Incubators." Our six places of business bring the Cyphers Company's goods near to you, thus saving you freight charges and valuable time. A trial order will demonstrate the profit to you in dealing with us. Our constant aim is to make a Cyphers Company friend of every Cyphers Company customer.

NO MATTER WHAT YOU WANT in the way of incubators, brooders, appliances, foods, clover and alfalfa products, standard supplies, remedies, books, plans, etc., write for our complete catalogue and guide for 1905 and our separate poultry supply catalog before placing your orders elsewhere. Among the exclusive articles we manufacture that are of guaranteed quality, each and every one being the best, or as good as the best, on the market—this, or your money back—are the following:

FIVE STYLES OF BROODERS:

BUFF WYANDOTTE PACE SETTERS.

Ackley & Page, Woodstock, Ills., the
Home of Prize-Winning Wyandottes.

By the Editor.

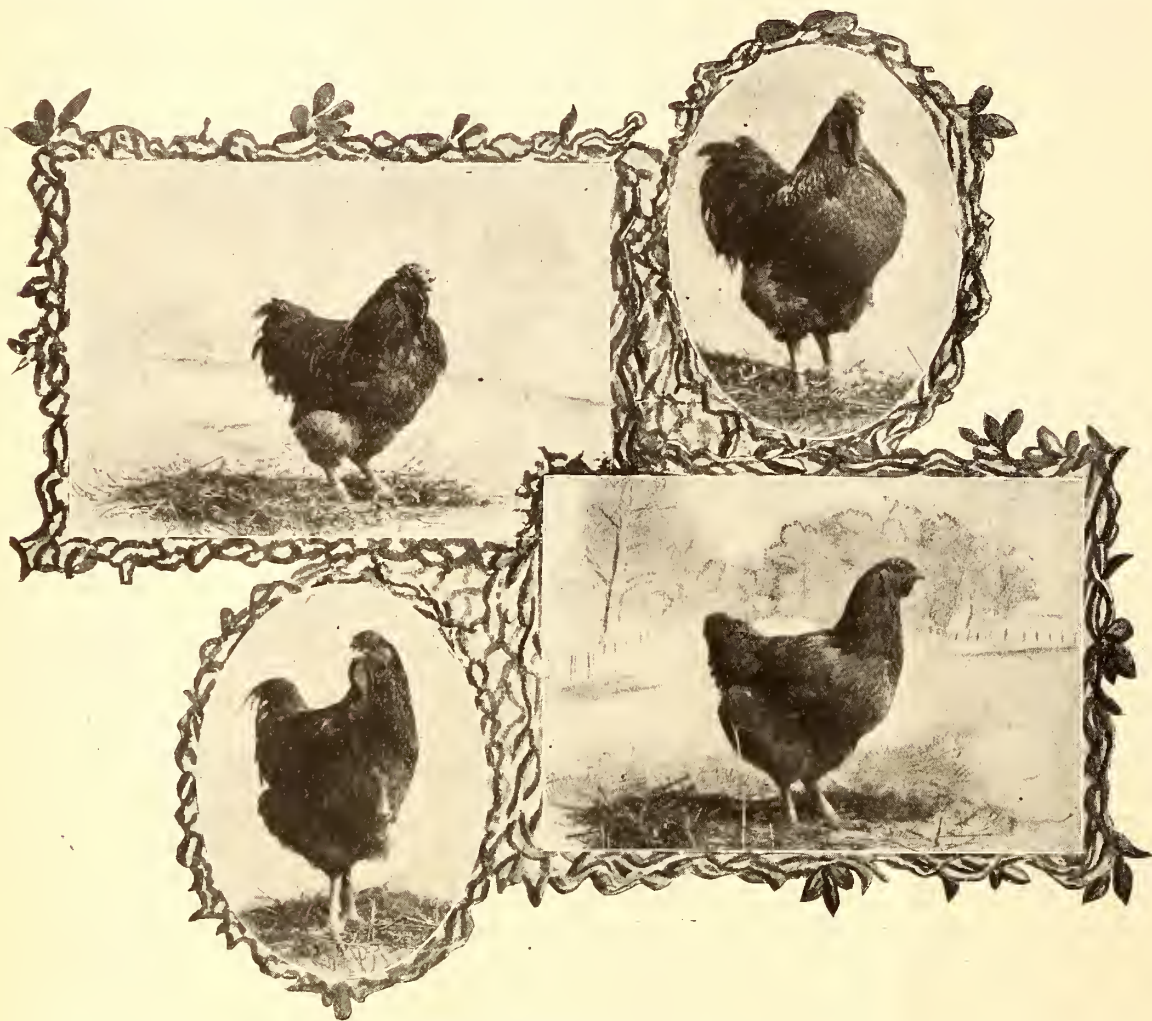

About one mile from Woodstock, Ills., is located the farm of Ackley & Page, where the birds reproduced in

ter, with commodious houses, ample range, and shade. Fifteen hundred birds have been hatched and reared there during the past twelve months.

Ackley & Page can honestly claim the honor of breeding annually more Buff Wyandottes than any one concern in America. On this farm is raised many of the prize winners at our leading shows where was produced the 1st and 2d prize cocks, and the 6th prize cockerel at the St. Louis Show, besides many other famous prize-win-

for Mr. Ackley to have considerable additional help, for the business is growing by jumps and bounds, and it keeps them all hustling to look after the birds and fill orders.

Their prize-winners are grand in shape, remarkably good in comb and the correct Wyandotte shape, short, broad and deep, and beautiful in color. They are remarkably strong in hens, and we believe they have the finest line of show and breeding specimens that can be found in this country. The

FOUR NOTED BUFF WYANDOTTES.

First cock, at St. Louis. Second cock, at St. Louis and first at Chicago, 1902. Sixth hen at St. Louis. Third hen at St. Louis. Bred and owned by Ackley & Page, Woodstock, Ill.

the accompanying two illustrations were raised. This is, without doubt, the largest farm in this country devoted to the exclusive breeding of Buff Wyandottes. The farm consists of 40 acres, a part of which is well covered with trees and shrubbery, which affords plenty of shade in the summer and protection from the cold winds in the win-

ners and others that will be prize-winners before the season is fully over.

Mr. Ackley's entire time is given to the fowls, and in Dr. Page one will have to go a long way to find a more enthusiastic fancier or one who has more at heart the production of this beautiful variety. The constantly increasing business makes it necessary

young stock has rounded into shape and have developed into the splendid specimens that they gave promise of early in the season.

Ackley & Page's Buff Wyandottes are purely standard in color, that rich golden buff, not the light lemon or buckskin, in fact there is little to criticize in their whole flock of 1,200 birds.

BLANCHARD'S WHITE LEGHORNS

are no experiment, having been carefully selected and bred for over twenty years. No labor or expense has been spared in building up and perfecting this strain, and while the production of large, pure white, fancy market eggs has been the main object, standard qualities have not been neglected. They are large, vigorous, active and handsome. Good winter layers and keep at it all summer. Unexcelled for introducing new blood or as foundation stock. Exhibition and breeding stock for sale. Illustrated circular free.

No Better Anywhere
At Any Price.

Winners at Madison Square Garden, N. Y., 1903-1904-1905

H. J. BLANCHARD

Box 997, Groton, N. Y.

White in males or females is practically unknown on this farm, and it would take a hard hunt to find any black, much less than is usually found in buff birds of any variety. A magnificent feature of their stock is the harmonious and pleasing shade of buff that is found throughout.

This firm conducts their business on a strictly business basis and are in the business to stay, treating their customers in a manner that will insure the placing of future orders when more stock is required. This is done by living up to the absolute guarantee to please the buyer. The commercial value of Ackley & Page's fowls is just as great and as much a care with them as their breeding of strictly fancy show specimens. They aim to perpetuate their best layers in their show females and their hardest, quickest growing males in their show cocks.

After trying many experiments for winter eggs, they have decided upon a canvas front house, and the only protection from cold being the thin sheet of canvas tacked on the frames; and last winter when the mercury was at its lowest, the hens in these houses made the best egg records. This demonstrates that it is hard to freeze a matured Buff Wyandotte, owing to its having the heaviest coat of feathers of any of the Wyandottes obtained from the Cochon cross, which makes them remarkably good cold weather layers.

Ackley & Page's Buff Wyandottes can be depended upon for deep breasts, rose combs and a sound buff color, and guaranteed to lay eggs in winter as well as in summer. A foundation of this stock will put any breeder on the road to success, backed up as it is by the wonderful success as egg layers and prize winners.

Their record of winnings stand at the top among Buff Wyandotte breeders since Jan., 1902. This firm has made six shows, three of them in Chicago, one in Nunda, Ills., one at Indianapolis, and one at the World's Fair, St. Louis, all with the strongest competition. In these six exhibitions they won thirteen 1sts and nine 2ds and 15 specials.

To those who are acquainted personally with these men that is a sufficient guarantee and to those of AMERICAN POULTRY JOURNAL readers, who have not this acquaintance, we can introduce them again with the strongest of recommendation.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—Will you kindly answer the following questions through your paper:

1st. At what age should light Brahmas reach standard weight for cockerel and pullet, and at what age should they reach full standard weight for cock and hen?

2nd. Is it a sign of impure blood for White Wyandottes to throw off single-comb chicks?

R. R.

Crawfordsville, Ia.

1st. Light Brahma cockerels and pullets should reach standard weight at seven months. Hens and cocks at one year.

2d. Yes.

The chief peculiarities of the English method of dressing poultry are: Killing by wringing the neck, not by chopping or sticking; feathers are left on the neck for a few inches from the head, also a few feathers on tail and tips of wings; the breast bone is sometimes broken down by pressing it to one side with the thumbs, and the wings are twisted to the back of the bird.

MR. WARD IS SMILING.

Just before going to press with this issue of the Journal, we received the following note from Mr. Clarence Ward, proprietor of the Congress Park Poultry yards, of Congress Park, Ill. He also encloses his latest photo, taken after the ribbons were placed at the Chicago, 1905 show, which we publish herewith. We don't blame him for smiling and heartily congratulate him. The note and photo follow:

EDITOR AMERICAN POULTRY JOURNAL.

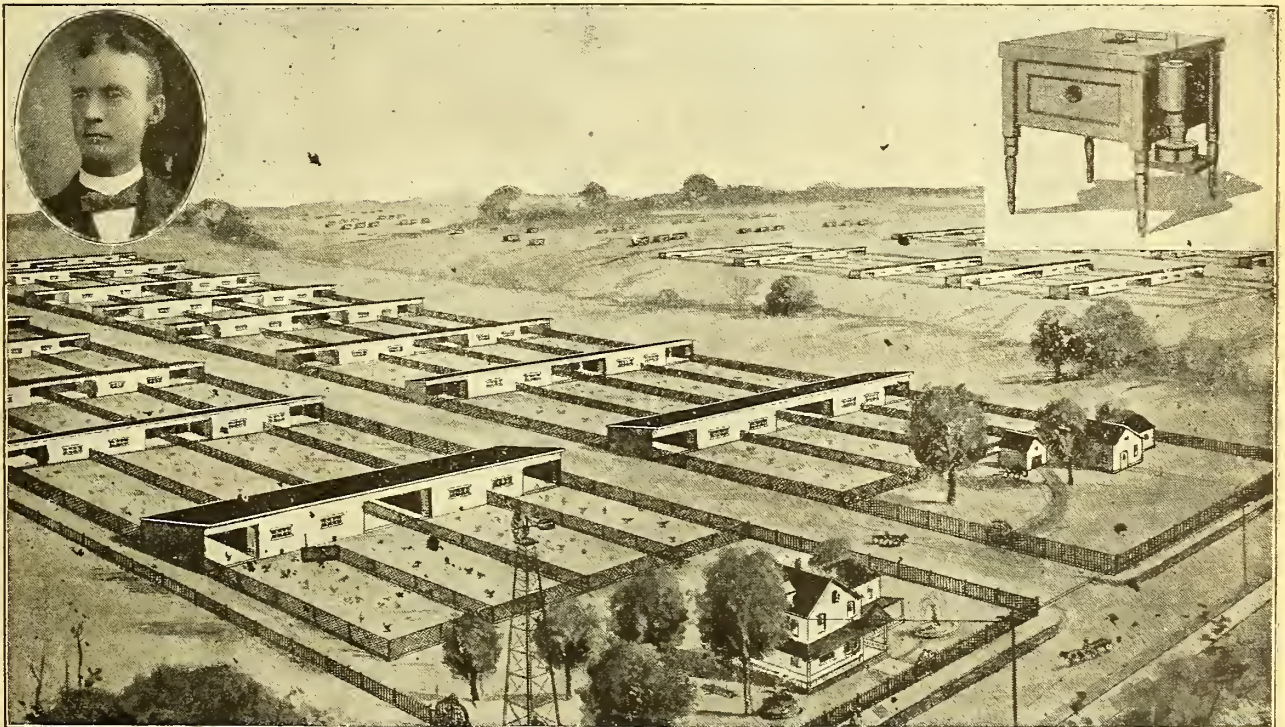

Dear Sir—I am smiling all over my face and half way down my back and feeling pretty good, thank you. I won first cock and first pen, White Wyandottes on six entries at the great Chicago, 1905 show, in one of the hottest classes ever shown in Chicago. This looks as if I had the goods in White Wyandottes, does it not?

Thanking you for the many kind courtesies you have extended me, and wishing your valuable journal every success, I am

CLARENCE WARD.

Congress Park, Ill.

P. S.—Please tell your many readers to read my half page egg ad. in this issue of the Journal.—C. W.

Crescent Poultry Farm, Des Moines, Iowa. The Largest and Most Complete Poultry Farm in the Country

Our New Book, "MONEY IN POULTRY," Just Out.

FRANK FOY proprietor of the CRESCENT POULTRY FARM, has just issued a new and valuable book called "Money in Poultry." This book contains 84 pages and probably gives more reliable information about the business based on actual experience on the farm than any other book of the kind published. It tells everything about the poultry business from start to finish; describes our 25 leading varieties of pure bred fowls, and the Frank Foy Incubators and Brooders. Quotes extremely low prices on fowls, eggs, incubators and brooders. Mailed for 4 cents in stamps. Address

FRANK FOY, Box B, Des Moines, Iowa

LEARN TO RAISE POULTRY PROFITABLY

If you are raising poultry, your flock should under ordinary conditions be yielding a clean profit of 50 per cent. Are you getting this result? If not you are making costly mistakes. You are not conducting your yard on the right principles. Success comes, primarily, from knowing how to do some one thing well. It will pay you to master the subject of Poultry Culture. Chickens are veritable mortgage lifters. The sooner those who are now raising poultry, or who contemplated doing so, realize this fact, the sooner the number of happy homes will be increased. A very small proportion of the people in the United States are permitted by circumstances to learn any of the professions or to enter active commercial life, but there are thousands of men and women of this class who can profitably raise poultry in back yards, on village lots or small farms and actually realize a far greater percentage of profit than can the city business man and with not half so much worry and trouble. You can learn the interesting, healthful, and profitable vocation of Poultry Culture in your own home without interfering with your regular work. We can teach you by our correspondence method. It is complete in every detail. It clearly explains every phase of the subject from beginning to end. Nothing is left uncovered. Thousands of dollars and years of hard work by some of the greatest poultry specialists in the country have been spent in perfecting it. The authors are men who know what it means to get right out into the yards and conquer the obstacles which confront poultry raisers. You are not asked to experiment with fine cut theories emanating from an office desk. The lessons are sent regularly to your home. You can study the course at night and put the principles into practice next morning. The benefits are immediate. The instruction of each student is conducted individually and is made to suit each separate case. Anybody, anywhere, whether beginner or old hand at the business, should take a course of instruction with us. The study can be taken up at any time. Our teaching is an unqualified success. We have placed numbers of students in

GOOD PAYING POSITIONS

We are constantly in receipt of requests from owners of poultry farms, located in all parts of the country, asking us to recommend properly qualified men as managers. Many of these positions pay large salaries, some include a liberal business interest also. Qualify yourself for one of these lucrative positions. We can place you the moment you are ready.

We have just published a new book, dedicated to all who keep chickens, yet don't make as much out of them as they might, and to those who **don't** keep them, yet **could** if they **would**, and who if they **did**, could make important additions to their income. It is bright and interesting. It is free. Write for a copy—**Now**.

COLUMBIA SCHOOL OF POULTRY CULTURE

Box 716, Waterville, New York

COLUMBIA SCHOOL

WATER

RESIDENCE COURSE OF INSTRUCTION IN POULTRY CULTURE

Many of our students in Poultry Culture have become so deeply interested in the subject, and have been so much benefited by the instruction we have given them, that they have written, asking if we could not take them for a course of **personal instruction** at our Model Poultry Farm. After careful preparation we have arranged to accommodate a limited number of students of both sexes. This personal course is as thorough and comprehensive as active brains and human ingenuity can make it. It means the actual, practical application of the principles we teach, from the very moment the student reaches our farm. There are regular hours for study each day and regular lectures by members of the faculty. On arrival, each student is given a flock of chickens to handle, and is required to keep accurate statistics and report on results. By diligent application this course of study can be completed in four weeks. Students can enter at any time. The cost of tuition is small. At no other institution in this country can such a thorough and practical education in Poultry Culture be obtained. We make no exception whatsoever.

The buildings on our farm are of the latest and most approved type, and included in our poultry equipment are incubator cellars and incubators, with a capacity of 7500 eggs at one sitting; three large pipe brooder houses, with a total floor space of 6000 square feet; eight long laying houses, with floor space of 17,000 square feet, affording quarters for 2000 breeding birds; two feed houses, work shop, fattening house, with capacity of 750 birds in crates, and a large number of colony houses. These buildings are all constructed in the very best manner and equipped with modern appliances. The farm of 60 acres is devoted exclusively to the poultry work, there being no other live stock, excepting a few registered Holstein cows. Our birds are practically all Single Comb White Leghorns and are extremely well bred, having won leading honors at many of the largest shows in the country. However, for the benefit of our resident students, we have added a few birds of the following varieties: Barred and White Plymouth Rocks, Partridge and White Wyandottes, Black Orpingtons, Black Langshans and Light Brahmas.

No school on earth, neither public nor private, can boast of equal facilities. Visitors are always welcome at our farm, which is located in the outskirts of Waterville, N. Y.. This village is on the D. L. & W. R. R., 250 miles from New York and 22 miles from Utica. We invite all interested persons to come and get acquainted with us and investigate our methods. These details will show in what a thoroughly practical way every phase of poultry culture is taught by us, and will readily explain why all our students, both suburbanites, farmers and fanciers, meet with such unqualified success. If you are interested in taking a personal course in Poultry Culture, write us. We will promptly furnish full information and advise you regarding your individual case.

COLUMBIA SCHOOL OF POULTRY CULTURE

Box 716, Waterville, New York

of POULTRY CULTURE.

E. N. Y.

LEARN TO RAISE POULTRY PROFITABLY

If you are raising poultry, your flock should under ordinary conditions be yielding a clean profit of 50 per cent. Are you getting this result? If not you are making costly mistakes. You are not conducting your yard on the right principles. Success comes, primarily, from knowing how to do some one thing well. It will pay you to master the subject of Poultry Culture. Chickens are veritable mortgage lifters. The sooner those who are now raising poultry, or who contemplated doing so, realize this fact, the sooner the number of happy homes will be increased. A very small proportion of the people in the United States are permitted by circumstances to learn any of the professions or to enter active commercial life, but there are thousands of men and women of this class who can profitably raise poultry in back yards, on village lots or small farms and actually realize a far greater percentage of profit than can the city business man and with not half so much worry and trouble. You can learn the interesting, healthful, and profitable vocation of Poultry Culture in your own home without interfering with your regular work. We can teach you by our correspondence method. It is complete in every detail. It clearly explains every phase of the subject from beginning to end. Nothing is left uncovered. Thousands of dollars and years of hard work by some of the greatest poultry specialists in the country have been spent in perfecting it. The authors are men who know what it means to get right out into the yards and conquer the obstacles which confront poultry raisers. You are not asked to experiment with fine cut theories emanating from an office desk. The lessons are sent regularly to your home. You can study the course at night and put the principles into practice next morning. The benefits are immediate. The instruction of each student is conducted individually and is made to suit each separate case. Anybody, anywhere, whether beginner or old hand at the business, should take a course of instruction with us. The study can be taken up at any time. Our teaching is an unqualified success. We have placed numbers of students in

GOOD PAYING POSITIONS

We are constantly in receipt of requests from owners of poultry farms, located in all parts of the country, asking us to recommend properly qualified men as managers. Many of these positions pay large salaries, some include a liberal business interest also. Qualify yourself for one of these lucrative positions. We can place you the moment you are ready.

We have just published a new book, dedicated to all who keep chickens, yet don't make as much out of them as they might, and to those who **don't** keep them, yet **could** if they **would**, and who if they **did**, could make important additions to their income. It is bright and interesting. It is free. Write for a copy—**Now**.

RESIDENCE COURSE OF INSTRUCTION IN POULTRY CULTURE

Many of our students in Poultry Culture have become so deeply interested in the subject, and have been so much benefited by the instruction we have given them, that they have written, asking if we could not take them for a course of **personal instruction** at our Model Poultry Farm. After careful preparation we have arranged to accommodate a limited number of students of both sexes. This personal course is as thorough and comprehensive as active brains and human ingenuity can make it. It means the actual, practical application of the principles we teach, from the very moment the student reaches our farm. There are regular hours for study each day and regular lectures by members of the faculty. On arrival, each student is given a flock of chickens to handle, and is required to keep accurate statistics and report on results. By diligent application this course of study can be completed in four weeks. Students can enter at any time. The cost of tuition is small. At no other institution in this country can such a thorough and practical education in Poultry Culture be obtained. We make no exception whatsoever.

THE NEW YORK SHOW

The Sixteenth Annual Exhibition of the
New York Poultry, Pigeon and
Pet Stock Club a Success.

Like its predecessors, the Madison Square Garden Poultry Show scores another grand success. It ushered in the New Year of 1905 with a show that was not only a record breaker, but a record maker. When it becomes necessary to double tier the Garden with poultry coops, there is truly "something doing." Other shows may come and other shows may go, but Madison Square goes on supreme as ever. "If you want to see the cream of the poultry yards of America you will always find it at Madison Square," said a veteran poultryman to the writer. He might also have added, if you want to see the "men behind the fancy" who have made pure-bred poultry the ideals they now are, visit Madison Square. It is the Mecca of Poultrymen of all degrees. Those that have made past records, those that are coming to the front, those that are just entering the friendly arena of competition, mingle and discuss with the spirit of true fanciers the fine points of the breeds that are on exhibition.

At Madison Square the advent of all wonderful advancement in poultry breeding is first shown to the public. When a breeder succeeds in evolving anything better than the usual best, the first introduction to the poultry world is generally made through Madison Square Garden poultry show. One thing every poultryman recognizes is that no other show gives such a prestige with its awards. Visiting poultrymen always find the arrangements or classifications such that they seem to know just where to locate the varieties they are individually interested in. If certain fancies are inquired for the enquirer is directed to go to Plymouth Rock alley or other breed "alleys," as the case may call for. "Once a fancier

always a fancier" is always strongly illustrated at Madison Square. There you find scores of men who have grown gray and full of wisdom sauntering through the long aisles of coops. Some of them have not kept a bird for years, but their hearts beat as true and warm as ever for their first loves in the poultry world—such is the true fancier. What a wonderful impression the Garden has on poultrymen who visit it for the first time. He is awe struck at the immensity, lost in admiration of the beautiful and extensive decorations, dumbfounded at the tremendous crowing concert. He had imagined how great everything was, but as he had made his comparison with other shows, no wonder he was surprised.

Bordering on two sides of the entire Garden there were displays of incubators, brooders, poultry yard appliances, foods, etc. The display was an object lesson to many visitors. The fact that the growth of the poultry industry has kept equal pace with "general prosperity" of that of any calling, was satisfactorily illustrated. The fact is that hens now-a-days need only lay the eggs, and artificial methods "will do the rest" towards perpetuating her increase in family. And even under such circumstances there is not the remotest danger of any race suicide among the hens.

It was a pleasing sight to see the "Midway" row of booths, across the Fourth avenue side of the Garden, that represented the poultry press. Each was attractively decorated, and side by side was business transacted in pleasant harmony. Good—a nice start for 1905.

One of the most remarkable exhibits of rare varieties of ornamental fowls that was ever made by a single individual was that of Homer Davenport, the well-known caricaturist. There were 37 varieties of the pheasant family and 28 varieties of rare water fowls in Mr. Davenport's collection. Among those most interesting to poultrymen was the Adam and Eve (Sonnerants

Jungle fowl) of poultry creations. Said to be the first time the genuine jungle fowl was ever exhibited at a poultry show. No wonder some of the beautiful colors of some breeds of domestic poultry come from inheritance. Well might Mr. Davenport's display be said to be a show within a show. Speaking generally of the exhibits it can be truly said that it was as much of a quality as a quantity show. After the winners had been selected and the ribbon honors were on the coops, there were many "others" that seemed equally deserving of high honors in all the classes. That many breeds are making rapid improvements was conspicuous in many classes. Notably so were the newer buff breeds. There was a more marked uniformity in breed requirements with the Orpingtons. There was quite a display of Lakenvelders, Faverolles, Columbian Wyandottes and other comparatively new breeds. The specimens were of a character such as to give a better general idea of what the breeds look like than any other display has ever offered.—Geo. O. Brown in American Fancier.

LIST OF AWARDS.

Light Brahmas—Cock 1-4 Norwood Farm, 2 Klee Bros., 3 Woodcrest Farm, 5 J. W. Shaw; hen 1-2-3-5 Norwood, 4 Shaw; cockerel 1-4 Norwood, 2-5 Shaw, 3 Balch & Brown; pullet 1-3-4-5 Norwood, 2 Shaw; pen 1-3 Klee Bros., 2 C. P. Nettleton, 4 Norwood, 5 Philander Williams.

Dark Brahmas—Cock 1, hen 1, cockerel 1, pullet 2 Arthur H. Leach; cockerel 2, pullet 1 W. A. Fuller.

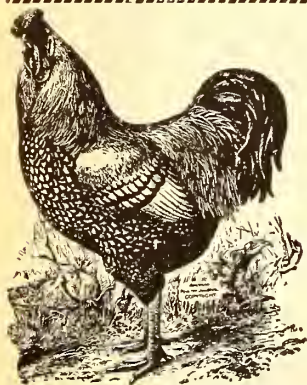

Buff Cochins—Cock 1 C. C. McLean, 2 Geo. Ball, 3 Chas. Magee; hen 1 Magee, 2 McLean, 3 Ball; cockerel 1 Magee, 2 McLean, 3 Ball; pullet 1 McLean, 2 Magee, 3 Ball.

Partridge Cochins—All awards to Geo. W. Mitchell except hen 5, cockerel 5 R. John Davey.

White Cochins—All to Adolph E. Anderson; pen 1 C. P. Nettleton, 2 E. L. Freeman.

Black Langshans—Cock 1 H. C. DeTurk, 2 E. F. Gibson, 3 R. P. Keasbey, 4 Henry Cundell; hen 1 Gibson, 2-5 Keasbey, 3 DeTurk, 4 Cundell; cockerel 1 Bert M. Bratt, 2 DeTurk, 3 Gibson, 4-5 Keasbey; pullet 1 Cundell, 2 Gibson, 3-5 N. C. Reynal, 4 Keasbey; pen 1 Keasbey.

White Langshans—Pullet 1 N. C. Reynal.

New Stock For The New Year

Improve the quality of your stock by adding a pair, a trio, or pen of our high grade

PRIZE WINNING FARM BRED POULTRY

Last Fall at various State and County Fairs we won **1628 Prizes**

The stock we sell you is just as good for breeding purposes as our prize winners. We guarantee the purity of the breeding and general health, vigor and condition of everything we ship. Special prices if you write and call attention to this ad.

Our New Catalogue is in press and will be ready for mailing in a few days. It is the most practical poultry book on the market. No high sounding titles; just plain "Chicken Sense." Write and send five 2-cent stamps for a copy. It will save you money.

HERE ARE A FEW of the breeds shown and described at the special prices.

Light or Dark **Brahmas**; Partridge, Buff or White **Cochins**; Black **Langshans**; Barred, White, Buff **Ply. Rocks**; Black or Mottled **Javas**; Golden, Silver White or Buff **Wyandottes**, Black, White or R. C. Black **Minorcas**; S. or R. C. W. or Brown **Leghorns**; or Buff **Leghorns**; Buff **Orpingtons**; Blue **Andalusians**; Cornish Indian or B. B. Red **Games**, Pekin **Ducks**; Toulouse or Embden **Geese**; Mammoth Bronze or White Holland **Turkeys**. See catalogue for complete list.

EGGS

We pay as great care to the selection of eggs for shipping as to the mating, breeding and choosing of stock for filling orders. We guarantee all eggs shipped by us to be pure bred and fresh. We pack with greatest possible care. **No better eggs from anyone at any price.** Write us now for what you want and get our quotations before you buy.

The Remarkable Growth of our business has necessitated largely increasing our farm acreage and removing our business offices to commodious rooms in the Seitz Block, opposite Freeport College of Commerce. These changes give us vastly improved facilities for handling all branches of our business. We get our mail every hour and can be instantly reached by Long Distance Phone or Telegraph. Address all correspondence to Freeport. **We have no branches.**

GREAT CENTRAL POULTRY FARMS, The F. W. NIESMAN CO., Props. Box 40 FREEPORT, ILLINOIS

Barred Plymouth Rocks—Cock 1 C. H. Latham, 2 Sound Cliff Poultry Yards, 3-5 Gardner & Dunning, 4 John Ridgley; hen 1-3-4 Latham, 2 Ridgley, 5 F. D. ELM POULTRY YARDS

Established 1888. P. O. Box 121, Hartford, Conn.

System in Poultry Practice

BY JAMES SHACKLETON.

30 Chapters, 147 Pages, One Dollar, Postpaid.

In 17 days just elapsed I have received orders for 87 copies of this book from California; chiefly because many Californians bought the book a year ago, have tested it in their own experience, and told others of its value. Not the least bit like any other poultry book, but many people say it is better for that. New circular that convinces, for a stamp. A chapter of book postpaid for ten cents. The book and American Poultry Journal for one year for \$1.10, new or renewal.

JAMES SHACKLETON,

Box A 12, Milburn, New Jersey

"CLEANINGS IN BEE CULTURE"

The authoritative publication on bee-raising; ably edited—well printed—filled every half month with 40 to 60 pages of meaty, easily understood bee information. For beginners and the experienced. Teaches you to observe the bee's habits and how to get the most and best flavored honey. Write your name and address on a postal card. Mail it to us. We'll send you a free booklet highly interesting—and a free copy of our paper. Read it. Then subscribe. Six months' trial twenty-five cents.

A. I. Root Company, Pubs., Medina, Ohio.

Makes more milk and butter
Pratts Cow Tonic.

Made by Pratt Food Co., Phila. Over 30 years old

Wyckoff's S. C. White Leghorns

Acknowledged everywhere the world's greatest laying strain. None better in standard qualities. By our 30 years of continuous breeding and selection we have placed them unquestionably in the lead as the most profitable strain of poultry in America. You assure your success by using them as your foundation stock. Eggs for hatching in any quantity from the choicest and most carefully selected matings. Eggs, \$2 per 15; \$3.75 per 30; \$5 per 45; \$10 per 100. Send for free catalogue and let us know your wants. Address

WYCKOFF'S FARM,

Aurora, Cayuga Co., N. Y.

BENNET'S BARRED ROCKS

—WON AT CHICAGO, 1905—

Second cock, 2d hen, 3d cockerel, 1st pullet and 2d pen. Birds of the same breeding, scoring to 93, for sale.

DR. O. P. BENNETT,

Box 328, Mazon, Illinois.

Black Langshans

I won the \$25 Challenge Trophy Cup for highest scoring cock, cockerel, hen and pullet at the great Chicago Heights Show, 1905. Also silver cup for highest scoring pen in Asiatic class. Also won at the Chicago Show, 1904. Stock and eggs for sale. Send for circular and price list.

R. A. HEWES,

Box 1, Crete, Illinois.

Single Comb White Leghorns

America's most profitable variety. Cockerels and pullets for sale. Eggs \$2 per sitting; good hatch guaranteed. My birds are farm raised.

H. G. HAUSER,

633 West 62 St., Chicago, Illinois.

96 Point Pullet. The White Kind.

Ring's Rocks

Won at Chicago, January, 1905, 1st cock, 1st and 5th hen; 1st and 3d pullet, 1st pen on five entries.

Ring's Wyandottes

Won at Detroit, 1905, 1st and 2d ckl., 1st and 2d hen, 1st, 2d, 3d pullet, 1st pen on seven entries. Write for free catalogue.

Decatur, Mich.

\$225.00 GIVEN AWAY

for Experience and Results in Hatching and Rearing Chickens by Artificial Methods. Any one may take part in the competition. Simply notify Incubator Editor, Farm and Home, before March 1, that you propose to submit reports for the \$225 cash prizes we offer.

INCUBATOR-BROODER CONTEST

To help poultry keepers and farmers make more money from their poultry, and to find out the best methods and profits in hatching and rearing chicks by artificial means in comparison with natural methods, this contest is undertaken by Farm and Home. It is the most unique thing of the kind ever conducted, and must prove of absorbing interest.

FULL PARTICULARS

of this contest will be found in our great Poultry Annual. Send 10 cents now for three months' trial subscription including this great issue, which alone is worth 50 cents. Address

Chinese Geese—Gander 1-2, goose 2-3 Alta Crest Farm; gander 3, goose 1 Springfield Field.

The exhibit of the Columbia School of Poultry Culture at the New York Madison Square Show occupied a desirable position at the left of the main entrance. The booth was 20 feet in length and consisted of three arches. The entire structure was decorated with red, white and blue bunting. One of the principal attractions of this exhibit was the set of chick embryos, twenty-one in number, which clearly illustrated the development of the chick during each successive day until the time of hatching. These specimens were preserved in formalin. Several microscopes were also used and slides exhibited showing feathers, poultry parasites and also particularly interesting phases of the development of the embryo. Among the latter slides may be specially mentioned one with a small piece of skin taken from a seven-day embryo showing the beginning of the feather development. This part of the exhibit was looked after by Mr. George H. Lamson, Jr., a man who has for years made a special study of the subject. Photos of

the large model poultry farm connected with the school, together with recommendations from students and from gentlemen who have hired Columbia students, were shown under glass. Messrs. Brainard and Stoneburn with two assistants were kept busy answering questions concerning the school and its work and passing out literature. A large number of visitors were enrolled as students and names of many prospective students taken.

H. Murray Conners of Castana, Ia., has been breeding poultry for years, and has won the blue ribbon each and every time he showed. He has the best blood that is to be secured from the best breeders. He has Barred Plymouth Rocks and has won under Shellabarger, Russell and Tucker. His birds this year are bred from the finest mates of Richardson and Latham. If you want choice show birds at the right price Mr. Conner can furnish them.

Old Trusty Incubator.

The new machine by an old hand. Made by Johnson, the Incubator Man. Only a year old, and it didn't have to be improved for 1905. Johnson made it right to begin with.

Johnson
Pays the
Freight

You Can't Know Too Much About Johnson's Pay-for- itself Hatcher.

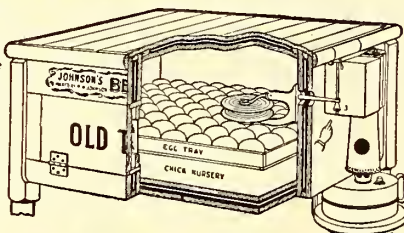

The more you know about it the better you like it. Johnson wants you to know all about it. **Take a square look at the cuts and read:**

Made of select California redwood and 12-oz. cold-rolled copper. Miller Safety Lamp, Taylor Bros.' guaranteed incubator thermometer, double doors, sides, bottom and top. There could be no better material or construction.

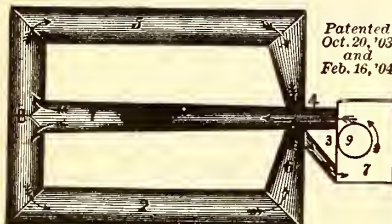

Forty Days Free Trial

And Johnson Guarantees Every Machine 5 Years.

This cut shows the workings. Johnson's system is planned for results and convenience. Note positions. All parts below the level of the lid, leaving the lid for a table. Automatic regulator comes already attached and connected, a single adjusting nut on the outside of the machine. The double wafers well out over the eggs and down close to them. Regulator counter-balanced within itself.

Copper Pipe Heating System

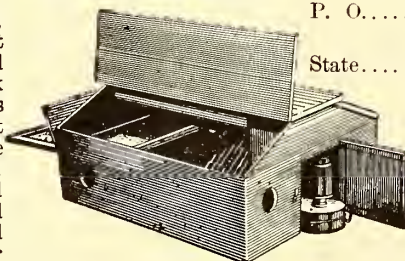

Patented
Oct. 20, '03
and
Feb. 16, '04

The hot water discharged to opposite end of the egg chamber, divided and returns back to boiler, No. 7. Pipes 2 and 5 and 1 at point No. 4 equal in radiation to pipes 2 and 5 at any point. Boiler No. 7 fitted with patent return hood, saves half the kerosene and draughts of air do not affect the lamp.

OLD TRUSTY BROODER

Made of best California redwood, never shrinks, swells or pulls apart at joints. Miller Safety Lamp in solid iron lamp box, no gas can enter chick chamber. Inclined floor prevents chicks from piling up. Enough heat under floor to take chill off. Note the hover cloth frame, partly withdrawn. Chicks hover under cloth warmed from above. Chick backs are warmed and sleepy nerves soothed the natural way. Chicks don't pile up, chill or become overheated.

Nearly 13,000 Old Trusties

Incubators and Brooders, used the first season. That's the record for a new machine. The only machine that ever got into the first rank the first year. They went out on Johnson's long trial plan and with Johnson's guarantee. They went at a reasonable price, too, for you know

JOHNSON PUT INCUBATOR PRICES DOWN.

None came back for no better machines can be made at any price. Johnson has made 80,000 Incubators and Brooders. He put all his experience into his new Old Trusty—the only machine he has anything to do with now. Get his new catalog and Advice Book. Over 100 pages, 300 reproduced photographs, records, house and yard plans, etc. Mailed FREE.

M. M. Johnson Company, Clay Center, Neb.

Special Order Blank

Since this advertisement has appeared in a number of papers, hundreds are writing Johnson that it is a better and more satisfactory description than is found in many catalogues—good enough to order on.

Johnson is a progressive man; borrows ideas from no one, but listens to suggestions from every one. Hence he has decided to attach an order blank and make special prices, freight paid to any Railroad Station in the United States that is east of the Rocky Mountains.

Complete easy instructions accompany each machine. Your money's worth or the money back when you deal with Johnson.

PETALUMA INCUBATOR CO'S NEW PLANT,
PETALUMA, CALIFORNIA

THE PETALUMA INCUBATOR FACTORY.

The growth of the Petaluma Incubator Company's business has recently been so enormous as to require the erection of a large new factory, shown in the illustration, and which is recognized to be the acme of convenience in factory construction. Twenty-seven years of incubator experience has demonstrated the necessity of plenty of room, good light, practical machinery, convenient methods of handling the work, good mechanics and first-class materials to produce the best incubator in the world. That is the combination that exists in the Petaluma Incubator factory. The celebrated California redwood lumber, copper, iron and other materials out of which Petaluma Incubators and Brooders are made enters the factory on the ground floor, where it passes through the varied woodworking and metal working machinery necessary to complete the parts with exactness, then by the use of elevators and other rapid means it is conveyed to the second floor or assembling department, where mechanics of the best class receive it, and here, as on the ground floor, a series of progression takes place, each mechanic performing his particular part of the work in which he has become an expert, and when an incubator or brooder has taken this circuit it is passed to the paint and varnish department, and afterward to the packing and crating department, by being elevated to the third story, and thence through the viaduct or upper bridge into the storage and shipping department, occupying the entire upper story of the large brick building over the office and sales-room, from which place the goods in turn pass down the endless quick-jim and away to the customer.

The making of Petaluma Incubators and Brooders is one continuous progression from start to finish, from raw material to the consumer, not a single step backward, but always advancing. That is the history of the Petaluma Incubator Company, whose matchless incubators and brooders are in successful use in every state in the Union and in every corner of the globe. Hatching chickens twenty-seven years ago more successfully than by hens surprised many people, but it was done by the Petaluma Incubator, and it has been doing the same thing ever since, demonstrating itself to be the most perfect and successful incubator made.

The Superior Jury of Awards at the St. Louis Exposition awarded the Gold Medal, the highest honor that could be accorded, to the Petaluma Incubator as a peculiar mark of distinction, and very justly so, for no incubator is so well made, of such superior materials, nor shows such efficiency in hatching as the Petaluma; besides, it is the most economical to operate. The Petaluma possesses features not to be found in any other machine, and everywhere, in all countries, in all climates and at all altitudes, the same universal results are obtained.

Besides the large factory and main office at Petaluma, Cal., branch stores are operated at 33 Market St., San Francisco, Cal., and 147 N. Delaware St., Indianapolis, Ind. A beautiful catalogue can be had by writing to any of these places.

ver Laced Wyandottes, Rhode Island Reds and Light Brahmas. This stock is from some of the most noted breeders and winners at shows, including some of the highest scoring birds at Chicago and other shows. In the building of this immense plant, upon which thousands of dollars have been intelligently spent, they have catered to clean quarters, good food, fresh water and careful attention. The loss from sickness is a very small item. No expense has been spared in erecting the most up to date buildings, and stocking them with the best poultry, and they have one of the most expert poultrymen in charge, who has had years of experience. They have been a number of years reaching this point, and are now satisfied that they have stock that they can sell and guarantee and stand by the guarantee. Prices of eggs and stock are very reasonable. The home of the plant is in Bangor, Mich., but all letters should be addressed to 1408 Fisher Bldg., Chicago, Ill.

The Millville poultry yards, Millville, N. J., has purchased from Ross C. H. Hallock the cockerel and pullet out of the first prize White Wyandotte pen at Madison Square Garden, paying \$200 for the cockerel and \$100 for the pullet.

Partridge Wyandottes

On two entries at the great Chicago show, January, won second cockerel. Eggs from pen headed by sire of this cockerel and other pens containing females of superb markings and shape headed by extra choice males, \$3 per setting.

DR. GASKIN & CO. Plainfield, Illinois

For Farmers —AND— Homeseekers

The January number of The Southern Field contains an article of great interest to Farmers and Stock Raisers, on the relative place of Southern Agriculture to that of the United States and showing the relative profits of farm products in the South as compared with returns in other sections. This article is of unusual interest, showing from government and other sources a condition of affairs as respects nearly all farm crops and all lines of agriculture not generally understood. HAVE YOU SENT YOUR NAME FOR THIS FREE BOOK?

Every reader of the AMERICAN POULTRY JOURNAL is entitled to a free copy of "The Standard Feeder," a book of 160 pages, full of useful information concerning the care, feeding and profitable management of livestock of all kinds. It contains 10 special chapters, written by experts; more than 300 illustrations, besides tables, statistics, directions for computing balanced rations and other matter which the stock growing feeder and farmer will find of money-making value to him. All you are asked to do to get this book is to write a postal card to the Standard Feeder, ... Howard St., Omaha, Neb., saying how much stock and poultry you keep. Do it today while you think about it. You'll be glad you did it.

WEST MICHIGAN POULTRY FARM.

In Michigan has been established one of the largest poultry plants in the west, at Bangor, Mich. To give an idea of its magnitude, we would state its capacity. The plant has over 1,000 feet of breeding houses, over 250 feet of hot water heated brooding houses, 50 individual brooders, 50 colony houses, one incubator cellar with 1,200 square feet, and one of 600 square feet. The plant has a capacity of over 10,000 eggs a month. This plant is stocked with some of the best Barred and White Plymouth Rocks, White Partridge and Sil-

Admission of R. I. Reds to American Standard of Perfection.

EDITOR AMERICAN POULTRY JOURNAL.

Dear Sir: A statement from the writer may be helpful in informing readers respecting the two applications of the Rose Comb Rhode Island Reds for admission to the Standard of the American Poultry Association, and in explaining the present status of the American Reds.

The application of the American Red Club was for the admission as American Reds of the "breed of fowls heretofore known as Rose Comb Rhode Island Reds," under a standard different from the standard under which the single comb Rhode Island Reds were admitted to the Standard of the American Poultry Association. The other application was for the admission of the rose comb Rhode Island Reds under that name and under the same standard adopted for the Single Comb Rhode Island Reds, with of course a statement as to the difference in comb.

The application of the American Red Club prevailed and the Rose Comb Rhode Island Reds were admitted as American Reds, under which latter name they are now to be known officially.

The motion made at the meeting and passed in the regular way was framed in the following language: "In accordance with the application of the American Red Club for admission to the Standard under the name of American Reds of the breed heretofore known as Rose Comb Rhode Island Reds, I move that the said Rose Comb Rhode Island Reds be admitted to the Standard

of the American Poultry Association under the name of American Reds, and with the Standard proposed in this application and made a part thereof, the said Standard to be modified so as to make it conform with the forms of the said Standard of the American Poultry Association, but not in such manner as to change its meaning in any part."

The motion was carried by unanimous vote, and the secretary was thereupon directed to cast the ballot admitting the Rose Comb Rhode Island Reds as American Reds, under the application of the American Red Club. It is proper to say that this movement in the interest of changing the name of the Rose Comb Rhode Island Reds to American Reds, and for a new standard separating these birds from the Single Comb Rhode Island Reds, has been advertised as much as possible since last March, when the application for admission was made to the American Poultry Association. Advertisements have been run in several papers on the subject and it is fair to say there is scarcely a Rose Comb breeder who did not know of the movement. A systematic plan of giving due notice to every breeder was adopted and each was requested to offer suggestions or to send in his objections to the plan but not a single protest against the movement has ever been received by the writer from any exclusive Rose Comb breeder or from any exclusive Single Comb breeder, and so far as the writer is informed, none of these breeders has ever made a protest to any person.

The membership of the club at the time of the Minneapolis meeting was over seventy-five, including most of the

best known breeders, and many were waiting to see the result of the application before uniting in favor of the movement, promising their support in case the application succeeded. It is fair to presume that the membership will be doubled within the next two months, and the club will proceed on progressive and energetic lines in the interests of this breed, whose destinies have now been placed in its charge.

The greatest pains were taken to have this case decided on its merits, so that, for the sake of the breed, it would not be possible for any person afterward to say that any action had been taken without due deliberation, or that any snap judgment had been attempted. It was thoroughly understood that the writer had not attempted, and would not attempt, to secure a vote by any bargain whatever, or by offering any poultry editor, or any other person, any support in return for his vote or his influence. The matter was well understood by all who voted on the proposition, and there is no doubt that the supporters of the motion will be as fully satisfied with their action at any future time as they were the time the vote was taken.

To show the attitude of the poultry press on the question, it is pertinent to state that there were present at the meeting at least nine editors and accredited representatives of poultry papers, including editors of poultry departments in agricultural papers, there were present at least eleven editors and representatives of poultry papers, every one of whom gave the motion his vote and his support.

DUSTON'S WHITE WYANDOTTES

Duston's White Wyandottes always in the winnings, the great World's Fair no exception; birds of my breeding and from stock sold by me win the prizes in the biggest class the world ever saw. That is the kind of goods Duston has, and a few testimonials tell the story of the kind of stock he has and is sending out this year.

—, Mass, Nov. 7, 1904.

Mr. Arthur G. Duston, So. Framingham, Mass.

Dear Sir: Please ship the cock and cockerels as soon as possible. I have visited most all of the large Wyandotte breeders this fall, and I must say that I have not seen a healthier or better lot of fowls than I saw at your place. Thanking you for your past fair dealings, and hope to have many more. Please ship the birds by American Express to —

(Signed) H. W. K., Supt. of Poultry.

—, Ill, Nov. 6, 1904.

Dear Sir: The cockerel came on O. K., and I am proud of him. He is truly a \$10.00 bird, and not a \$5.00 bird, which I could properly have expected. Thanking you for the honorable deal and the very courteous treatment accorded me, I remain,

Yours very truly, J. E. H.

—, Tenn., Nov. 7, 1904.

Dear Sir: The cockerel came yesterday, and he is a beauty. Am well pleased with him. Thanking you for your selection, I am, Yours respectfully, J. F. C.

—, New York, Nov. 2, 1904.

Dear Sir: It was my pleasure to receive this morning the case containing three pullets and one cockerel. * * * * * You have dealt most generously with me. I am deeply grateful to you. * * * * * They are the most beautiful birds I have ever seen of that breed. I am proud of them, and my one aim will be to bring my entire flock up to their standard. I hope I can send you favorable reports in the future as to my progress, and will use every effort towards influencing my friends who are otherwise interested, to deal with you. Thanking you again for the beautiful pullet, also the kindness extended, I remain

Respectfully yours, H. L. C.

—, New York, Oct. 19, 1904.

Dear Sir: I write these few lines to let you know that I have received the White Wyandotte cockerel. He came in fine condition, and I think he is a BEAUTIFUL BIRD. I am very much pleased with him, and THANK you very much for sending me such a beautiful bird. Yours truly,

G. M. Z.

—, Providence of Quebec, Oct. 25, 1904.

Dear Sir: The birds arrived in good condition. I am very much pleased with them. Yours very truly,

V. W. F.

—, New York, Nov. 9, 1904.

Dear Sir: The birds arrived safely last Wednesday. I am well pleased with them. Since their arrival they have laid thirteen eggs. Thanking you for sending me such nice birds, I remain Yours truly,

G. K.

These are a few of the splendid letters that I have received, and they give you, my dear reader, an idea of the kind of goods that Duston has; and is the same kind of stock that has started so many of our largest White Wyandotte breeders on the road to success. Aren't you interested to make as good a start? Stock at all times. Eggs \$5 a setting, two settings \$8, three settings \$10, five settings \$15, \$20 in hundred lots. Remember the best is the cheapest.

A NEW YORK PRIZE WINNER BRED AND OWNED BY
ARTHUR DUSTON, MARLBORO, MASS.

ARTHUR G. DUSTON
Box 1020 - South Framingham, Mass.

This club purposes to have no quarrel with the Single Comb breeders. They have their standard and we have ours, and each club will proceed in the way that seems best suited for the advancement of the breed it represents.

There is no valid reason why Single Comb breeders should be admitted to membership in this club, and since one of the main purposes of this movement was to separate the Rose Combs from the Single Combs, in name and in characteristics, it seems to the friends of the American Reds that the interests of both breeds will be better protected by excluding from membership in this club all who breed the Single Combs, at least until such time as the whole country is fully informed of the differences between the two standards, and all breeders have accepted the plan for separating the Rose from the Single Combs. It is much better in any case for one breeder to have but a single breed of birds so nearly alike that it is easy on the part of unscrupulous men to send both combs from the same pen, and the supporters of this movement believe that the best interests of all would be conserved by such a restriction. The plan will tend to decrease the number who breed both varieties, and at the present stage of the development of these birds, a breeder needs to give his careful attention to but one of the breeds in order to bring it forward in the most satisfactory way. The promoters of this plan are in many cases sinking their own interests for the advancement of the breed, and this fact will in the end be fully understood. The writer may be permitted to say that he has given his labor and money as no man has ever given his time and money in absolutely unselfish devotion to the breed, and though now he feels that others should do their part of the work required, yet he does not propose to relinquish his efforts or lose his interest.

The standard is framed for the future and will never need to be changed, and there is set up an ideal which will allow constant improvement and make it possible to breed from year to year to a definite plan. And being framed for the future, in some respects the standard makes it hard for breeders at present to sell specimens satisfactory to themselves, yet there is but one way to develop fine poultry, and that is to work to make every specimen as good as the best ideal specimens that have been or can be produced.

The weights will not please some, but those weights were not established in the interests of the writer, several men of the best reputation already having found it easy to bring out birds above the required weights, and deeming it advisable to place the birds at a weight which will allow them to compete as market poultry with the large American breeds, one man even having gone so far as to suggest that the weights should be put near those of the Orpingtons. These men also claim that the egg producing qualities of the birds are more satisfactory in the larger specimens than in the smaller ones. Certainly it seems as though the breed should maintain a standard for weight equal to that of the Rose Comb Black Minorcas.

**Cures distemper and pink eye
Pratts Distemper Cure.**

Made by Pratt Food Co., Phila. Over 30 years old.

Take also the matter of the black in the hackle (erroneously called "ticking," since the black almost always appears as a lacing.) Some will find it hard for a year or two to get rid of this, and the writer will be among the number, but several breeders known to the writer have very much less of this black in their birds, some having it almost entirely eliminated simply because they have not taken pains to preserve it.

The Single Combs now have the name and can make the most of it, and they have certainly no reason to complain of the new movement in favor of the Rose Combs. The Rose Combs have their own name, American Reds, and a distinct standard, and the breeders of this fowl will soon find, if they have not already discovered, that the separation of the breeds will mark a great step in advance for the Rose Comb Reds, and if there is any opposition which has not become known to the writer it will certainly disappear in the light of future progress.

Let all proceed in the interest of a true and uniform type of birds that will add grace and beauty to the show room while fulfilling to the fullest extent all the requirements of a great utility bird.

The proposed standard will be sent to all Rose Comb breeders who apply for it, though it must be understood that this standard is to be modified to some extent to make it uniform in style with the other standards of the American Poultry Association.

F. D. BAERMAN, Secretary,
American Red Club.

Dunellen, N. J.

J. M. HOLT'S WINNINGS.

J. M. Holt of Marshalltown, Ia., has for so many years demonstrated the value of his stock by his winnings, that it is a pleasure to again refer to his winnings of this season. Mr. Holt has bred Barred Plymouth Rocks for many years, and has always succeeded in making a record in the show rooms. Almost without exception they are birds of his own breeding, as he rarely pushes exhibit specimens. This season he has been able to make but two displays, one at Wayne County Poultry Association, Humeston, Ia., Dec. 19-23, 1904, with W. S. Russell as judge, as follows:

First, cockerel, 93; 2nd, pullet, 92½; 3rd, pullet, 92½; 4th, pullet, 92½; 1st, pen, 185¼.

At the Webster Poultry Association, Webster City, Ia., Jan. 9-14, 1905, I. K. Felch, judge, as follows:

First, cockerel, 93; 1st, pullet, 94½; 2nd, pullet, 93½; 3rd pullet, 93; 1st, pen, 186¼.

The above winnings demonstrate the fact that his birds won on their merits, as he did not attend either show in person or send any one to take charge of his birds, and they took chances with the others in a strong competition. All of the birds he raised himself.

CLEMENT & FIKE'S CATALOGUE.

In no way can the energy and determination to give the best be better determined than by the catalogue or printed matter that breeders send out in response to inquiries received through their advertising. This is very plainly demonstrated in the case of Clement & Fike, Libertyville, Ill., breeders of White Wyandottes and Pekin Ducks.

Their latest catalogue, from the press of the Recorder Publishing Co., Chicago, is printed on splendid paper: it is written briefly and to the point, beautifully illustrated and with an artistic cover. This catalogue contains illustrations from photographs of their principal winning birds at St. Louis and other places; views of their Poultry Plant, and in one illustration the portrait of Mr. Fike claims equal attention with a 95 point bird, making a pair that that you cannot pass by.

As a work of art it should be in the hands of every reader of the AMERICAN POULTRY JOURNAL, and once you have seen it it will certainly lead to your open-

ing up business relations with these gentlemen. Very seldom have we seen a handsomer and more to the point catalogue than this last one of Clement & Fike's.

Geo. A. Heyl, of Washington, Ill., one of the largest breeders of land and water fowl in Illinois and also Shetland ponies and Poland-China hogs, won twenty-four prizes on twenty-seven entries at the state show held at Peoria recently. Mr. Heyl was also elected to officiate as judge at the next state show. While Mr. Heyl is perhaps not so well known to our readers as he will be later on, his ad having commenced in last issue, he is certainly one of the men whom every one should know, and the best way to get an introduction is to send 15 cents for his catalogue, consisting of ninety pages and nicely illustrated. This treats on all diseases of poultry and how to cure them, how to mate and grow prize winners, as well as a complete price list of the 2,000 land and water fowls he has for sale. It also contains full description and illustrations of his Shetland ponies and Poland-China hogs.

C. N. Hansen, Warsaw, Ky., on four entries of S. C. Rhode Island Reds and shipping his birds one thousand miles from Warsaw, Ky., to Madison Square show at New York City for the first time, he won 1st cock, 1st hen, 1st cockerel, 1st pullet and three specials for color and shape. This certainly is a remarkable record.

ALFALFA AS A POULTRY FEED.

Owing to the shortage in the clover crop of the past season, and the scarcity of clover meal, poultry men are facing the proposition of finding some food material to take its place and fulfill the mission of Clover Meal.

To those who are in doubt, as an experienced poultry man I suggest that alfalfa meal, which is now advertised by several reliable companies, is a very valuable substitute and even gives better results than the clover meal.

Alfalfa, although not so widely known in the United States as clover, is one of the oldest of our forage plants, having been known to exist in European countries as early as 450 B. C., where it was called "Lucerne."

Alfalfa and clover belong to the same family of plants: "Leguminosae (or nitrogen gatherers), although quite different in nature of growth and appearance.

Alfalfa is a perennial, while clover is a biennial. Alfalfa produces three to four crops per season, yielding from three to seven tons per acre of fine hay, whereas clover yields on an average of two tons of hay per acre, and of coarser quality.

In appearance alfalfa is greener, has smaller and much more numerous leaves and finer stems.

The following table shows the chemical analysis of the two plants:

	Feed.	Protein.	Carbo- hydrates.	Fat.
Alfalfa		16.15	35.8	1.2
Clover		6.8	35.	1.7

Note in the above comparison that alfalfa is over twice as rich in protein, the egg forming element, and nearly equal in fattening elements. Further, alfalfa is much greener and when fed to poultry

more nearly presents grass conditions, the qualities we are looking for in our feeds.

We have been experimenting with alfalfa meal for some little time and are convinced of its superiority over clover meal.

Mr. Parrot, expert poultry feeder at Manning, Iowa, says: "It beats clover meal and chickens like it better."

We find that as a rule our hens fed on alfalfa meal lay very fertile eggs, which produce strong, vigorous, hearty chicks. We also find that they will molt quicker in the fall and commence to lay earlier in the season.

For laying hens we put several quarts of alfalfa meal into a closed vessel, then pour boiling water over the meal until it is thoroughly moistened; place a cover over the vessel and let the mixture steep for a while. Just before feeding dash a little cold water over the feed. This brings out the green color, and the whole presents a very green, pleasing appearance and is as near grass as any feed can be.

Some prefer to mix the meal with table scraps or grain, both of which add palatability and variety to the mash.

Bone meal and meat scraps make excellent additions to alfalfa or clover meal, both of which are concentrated feeds and great egg producers.

For parties who have only a few chickens I would advise them to get the alfalfa mixed with these various meat products as the firms who do this usually employ experts to mix the feeds and get them in proper proportion and in convenient form to handle, whereas one not experienced would be likely to over feed some of these highly concentrated feeds and bad results will follow.

As in everything else feed as directed by the company, and if this fails then call

the firm to account and they will usually suggest a remedy for the difficulty or "make good" in some other way.

Judging from our experience and from the experience of others who have used alfalfa meal, we are satisfied that it not only is equal to clover meal, but is superior, being richer in nutritive value; more palatable and in every way a more valuable feed.

For young chicks we feed it dry, mixed with grain or bread crumbs. On this feed they grow very fast, keep hearty and strong and feather out quickly.

Several firms are putting out alfalfa meal, and judging from our experience I have no doubt but that alfalfa meal is one of the best additions to our present poultry feeds.

A. L. COTTRELL.

Iowa State College, Ames, Ia.

Thos. P. Smith of Hoopston, Ills., has made the following winnings this year: White Wyandottes, Illinois State Poultry Association, Peoria, Ills., Jan. 2nd to 7th, 1905, tied for 1st cockerel, 2nd cock, 4th pullet on three entries. Chicago Heights, Ill., Jan. 10th to 17th, 1905: 1st cockerel, 2nd, 3rd hen; 1st, 2nd pullet, 1st pen: \$10 silver cup for highest score pen for highest class. Polish—Chicago Heights, Ills., Jan. 10th to 17th, 1905: 1st cock; 1st cockerel; 1st, 2nd hen; 1st, 2nd, 3rd pullet; 1st pen; \$5 silver cup for best pen.

Gen. Carey of Robinson, Ill., won at their recent show on Cornish Indian Games, 1st, 2d and 3d cock; 2d and 3d hen; 1st, 2d and 3d cockerel; 1st, 2d, 3d and 4th pullet; 1st and 2d pen; also all specials in his class. He has a limited number of cockerels for sale, some very good ones, but no pullets.

Your money back quicker than quick if I don't suit you. That's fair, isn't it? Surely I am not doing business for fun; if I didn't know positively that I had as good as the best, I would not offer your money back, if not satisfied, would I? Look up my record at the great Chicago Show in this issue. Send 4c in stamps for my book, on approval.

CONGRESS PARK POULTRY YARDS

Clarence Ward, Prop.

Congress Park, Ill.

A NEW INDUSTRY WORTHY OF YOUR ATTENTION.

When the general public clamor for an article, and an individual is found who combines brain, foresight, practical experience and capital, to produce this desired product that man is a genius, and a person to command the admiration of the multitude who use the perfected product.

We take pleasure in presenting to the readers of this paper, the picture of Mr. G. H. Payne, known as "The Alfalfa man."

Mr. Payne has been extensively engaged in the raising of alfalfa for a number of years. Perhaps no man in the state of Nebraska has had larger interests in western Nebraska and devoted more time to the cultivation and raising of alfalfa than Mr. Payne. In fact he is considered the best authority on the subject throughout the alfalfa district.

Mr. Payne is the first man who ever ground alfalfa into a meal. At least, the first man who ever made it known to the public.

Mr. Payne conceived the idea of cutting or grinding this alfalfa to take the place of bran and shorts for a winter feed on account of bran and shorts being very high in price that season. Mr. Payne tackled this problem and after careful study perfected machinery which handles this proposition perfectly.

The value of alfalfa as a feed for poultry, swine, horses and cattle has been demonstrated for years. The only question now remaining was how to get rich with one kind, while a rich put it in such shape that hogs, and especially poultry, could get its true value after the alfalfa pasture was dried up in the fall.

After perfecting the machinery to supply their home purposes Mr. Payne conceived the idea of milling alfalfa in large quantities and placing it on the market, as an absolutely pure food for all kinds of stock, and especially poultry, as it is much greener and better than clover meal. Analysis showing it to contain 15 to 19 per cent pro-

tein while clover has only 6 to 7 per cent protein.

Soon after this the Alfalfa Meal Company of Omaha, Neb., was organized with Mr. Payne at its head, and during the winters of 1903 and 1904 the sales of alfalfa meal for poultry were quite successful, although it did not seem to take quite so well with feeders of cattle, swine, or horses, on account of the meal being too fine and therefore hard to feed to cattle or horses unless it was dampened.

Mr. Payne after careful study of the experiments conducted by French investigators and the U. S. government in feeding molasses to all kinds of stock, concluded that molasses was the feed to mix with his alfalfa meal. The molasses will absorb the alfalfa flour or dust, which is the best part of the meal, thus placing two of the strongest feeds known together and adding a fattening element to high protein feed, which helps to balance the ration, also a great tonic for the animal system; palatability.

This feed was placed on the market under the name of "Alfalmo," and has been on the market now for about a year and the remarkable increase of sales and especially to first customers indicates the success it has already attained. Soon after alfalfa meal and alfalmo demonstrated their superior value as a general feed for stock, and the alfalfa meal as an unexcelled feed for poultry, small poultrymen, who preferred to buy their feed mixed, began to clamor for a complete poultry feed consisting of alfalfa meal and meat products. Mr. Payne after careful consideration and advice from the best poultry men in the land set about to satisfy this demand. He secured the services of an expert poultry feed man, and with his help perfected Payne's Alfalmo Poultry Feed, which consists of the greenest alfalfa meal combined properly with meat products, bone, and in fact everything poultry need except grain, which Mr. Payne surmised was cheaper for the poultrymen to add than to ship it to him mixed.

The success* of this feed has been phenomenal.

Mr. Payne has organized a large company at Omaha, Neb., to present these alfalfa products to the stock feeders and breeders of the land.

The International Stock Food Company are making a very liberal offer to our readers in allowing their incubators and brooders tested for thirty days before they will ask the customers to pay a cent for the machine. It is not necessary for us to introduce this company to our subscribers, as there is no other concern so well known in America as the International Stock Food Company. Their incubators and brooders are of standard make and are guaranteed in exactly the same way as they guarantee all preparations they manufacture.

Jewel Incubators are sold on their merits, and those who use them may expect most excellent results. The Poultry Supply Department is under the management of Mr. N. C. Sprague, who is perhaps one of the best known poultrymen and expert incubator men in the country. Orders that are intrusted to the International Stock Food Company and placed in the hands of Mr. Sprague will receive his personal attention and everything will be done to please each customer, no matter how large or how small the amount they may buy.

Their handsome Catalogue is ready for distribution and you should send for a copy and become acquainted with their plan of doing business, as it is quite unique.

The Exmoor Farms, of Lebanon, Pa., are importers, exporters and breeders of high-class poultry, ducks, geese and Collie dogs. This is one of the best known of the eastern breeders and they have in this issue their February announcement to AMERICAN POULTRY JOURNAL.

Our readers will be interested in knowing that these people recently purchased Theo. Wittman's Brown Leghorns and have added them to their own. They raise sixty-two varieties of poultry. They are putting rock-bottom prices on top this month, and are offering our readers honest bargain values. In Brown Leghorns they are undisputed champions. They bred the first prize pullet at Madison Square Garden this year, the seventh year that this line has won first pullet.

The Exmoor Farms have produced probably as many winners for the New York and Chicago shows as any in the country. Among their specialties will be noted Brown Leghorns, White Leghorns, Buff Rocks, Black Hamburgs, White Minorcas and S. C. Buff Leghorns.

Their ad this month gives their special February prices, and after reading their offers each AMERICAN POULTRY JOURNAL reader should write them for more complete information, and by sending 4 cents in stamps will receive their 42-page illustrated catalogue, including their special Brown Leghorn circular. Edgar A. Weimer, 354 Harmon Court, Lebanon, Pa., is proprietor, and C. A. Dutton, the Leghorn specialist, is the farm superintendent.

Mr. Lester S. Tarrell, of Darlington, Wis., who has an ad on another page of AMERICAN POULTRY JOURNAL, recently had a letter from Joseph Kwasinewski, of Milwaukee, Wis., saying that out of thirteen eggs received from Mr. Tarrell he got thirteen nicely marked little chicks. He adds that, of course, he could not expect any more, but did not expect so much. He appreciates the honest deal he got from Mr. Tarrell very much and whenever he is in need of any more eggs for hatching will send his order

POULTRY ON THE FARM.

The Kind of Hens—Houses and Yards— Care and Feeding—Housing and Cooping—Marketing—Profits.

That poultry on the farm will liberally repay considerably more care and attention than it receives on the average farm is apparent to any one who has the least idea of the possibilities of the profit there is in a well managed flock of farm poultry. Poultry culture when properly carried on in connection with diversified farming is one of the most profitable departments of farm work, considering the time and money invested. The small farmer is so situated that he can keep a small flock of laying hens at a much greater profit than can the villager or subur-

and forth. The poultry house should be placed as near as can be conveniently to the dwelling house, especially where, as is generally the case, the women folks have most of the work to do in the care and feeding of the flock. The majority of women on the farms would make a handsome profit from a small flock of hens if convenient arrangements were made for the care of the fowls, and the poultry house located near by, where too much time and strength would not need to be consumed in running back and forth between their housework and the work with the hens.

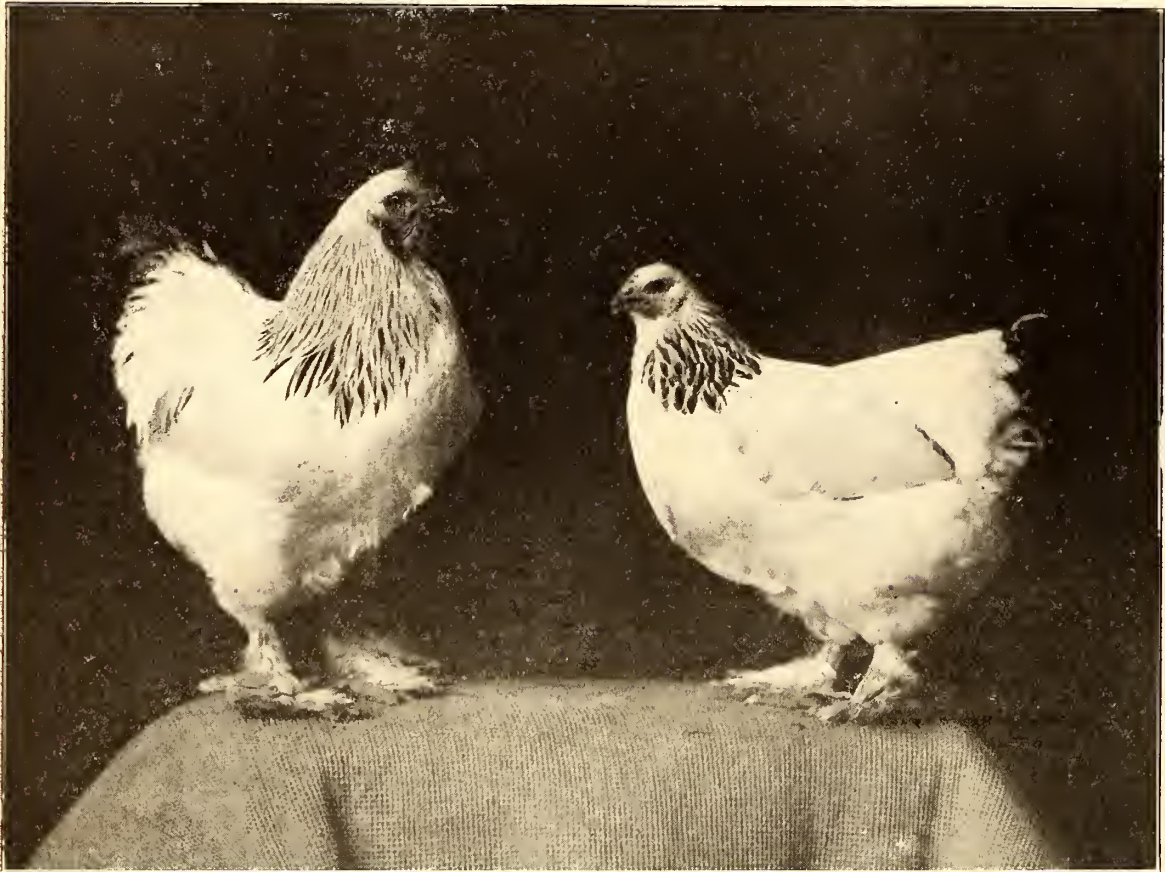

THE KIND OF HENS.

The breed of fowls for the farm is not of as much importance as is the way they have been bred. In the majority of cases hens are kept principally for the eggs they will produce, and it is important that the poultry kept be the product of hens which have been

ing each year from his best laying hens and improving his strain in egg production. If eggs alone are desired the smaller non-sitting breeds will probably be preferred, but where eggs and dressed poultry are both desired some of the general purpose breeds will do best.

HOUSES AND YARDS.

The house and yard room for the poultry ought to receive more attention than it does on the average farm. Houses should face the south and be high enough to permit the attendant standing up comfortably inside while doing the work. They should not be built more than twelve feet wide from north to south, and whatever length is necessary to accommodate the fowls to be kept. If buildings are wider than that, the sunlight will not penetrate to the north wall, and the buildings will be damp and musty, and not a healthy

A PAIR OF PRIZE WINNING LIGHT BRAHMAS.

First prize Cocker and pullet at Chicago, Nov. 1904. Bred and owned by Dr. N. E. Mighell, Marshalltown, Iowa.

banite who is required to buy practically all that he feeds his fowls. On the farm where hens are allowed more or less free range whenever the weather conditions permit them outside, they will forage for a considerable portion of their food, picking up scattered material which would otherwise be wasted and converting it into two of the most salable products the farmer has to market, fresh eggs and dressed poultry.

Among some of the reasons poultry are so generally neglected and allowed to shift for themselves on the farm is, that the poultry house is not conveniently located near the dwelling house, where the needs of the hens can be properly attended to, with the least possible time required in running back

carefully and systematically bred for layers. It is hardly necessary to say that pure bred poultry is so far ahead of the mixed fowls for egg production that there is no comparison, but many are not aware of the fact that some pure bred fowls are worth four or five times as much for layers as are some others equally as pure blooded, but which have not been specially selected and bred for prolific layers. As one man of considerable experience wrote me the other day. A poor man would get rich with one kind, while a rich man would get poor with the others." So the important point in selecting the breed for the farm is to select the breed you like best, and buy the stock from a breeder of that variety, who is breed-

place for the hens. A building twelve by twenty-four feet would house a flock of forty or fifty hens if the entire floor space was utilized for a feeding floor. The roosts could be placed in the north part of one end of the building with droppings board underneath to catch the droppings and high enough up from the floor to allow the entire floor space for scratching, this should be about two and a half or three feet. Then by boarding up the roosting place at the ends and arranging a curtain of common sheeting to drop down to enclose the front on extreme cold nights you have a very comfortable as well as a very convenient poultry house. The nests, water jars, grit boxes and other internal arrangements can be arranged

along the walls, up out of the way of the litter and dirt. Two common sized windows in the south front would furnish plenty of light for a building of this size, but it might be a good plan to have a door or two also in the south front, to throw open on nice sunshiny days in winter, thus converting the building into an open front scratching shed. If a small pen was added on to one end of such a building for a fattening pen for cockerels and a place to keep over a few of the best hens for breeders it would make an ideal house for a farmer's flock.

Where the hens can be given free range all summer, the yard room is not of so much consideration, but on most farms there are certain seasons when the hens must be kept in, and a good sized yard then with a little extra care in feeding, will well repay any expense incurred. Two rolls of four foot poultry netting will make a yard about one hundred and thirty-five feet long and as wide as the length of the building, running south from the house, and would give the flock ample room for good results in egg production any time during the growing season, and in the spring it would be an elegant park for the use of a small pen of the best hens with their male escort to furnish the eggs for hatching purposes.

CARE AND FEEDING.

The care of the laying hens in the summer time on the farm is not very exacting, if they are allowed the run of the farm. The principal thing is to see they are allowed a sufficient amount of grain, mostly good plump oats, together with what they can find on the range, to keep them in good laying condition. Water and sweet skim milk should be kept before them in clean dishes and the nest boxes and roosts gone over occasionally with kerosene oil to prevent the red mites getting a start. In the fall and winter when the other farm work is not so rushing the hens should have extra care and should be fed a regular mash food, made up in good part of steamed cut clover or clover chaff, with the boiled potato parings, table scraps, a little meat, meal or beef scraps and mixed crumbly with bran and ground feed. They should be fed daily all the mangels or other green food they will eat and given constant access to all the grit and oyster shells they will eat. All the whole grain should be fed in straw or other litter from six to ten inches deep on their feeding floors to induce the exercise necessary to best results in both health and egg production. A flock taken in off of free range and deprived of this exercise will soon cease laying and get all out of condition for a profitable winter's work. Exercise in confinement is essential to the most profitable work of the layers.

In the spring the few hens selected for breeding and kept over winter on rather light rations to prevent them laying heavy should be fed heavier on whole grain and just given an occasional mash, say twice a week, as the object is to get strongly fertilized eggs, rather than a large number with weak germs and consequently poor hatches. Where very many chicks are hatched

and raised incubators and brooders will hatch them out faster and earlier than is generally done with hens, and if the little chicks are given free range and fed dry feed such as cracked corn and cracked wheat in hoppers, where they can have constant access to the grain all summer they will not require a great deal of the housewife's attention during the summer.

HOUSING AND COOPING.

The housing of both old and young stock on a poultry plant is one of the most important points of consideration, from a standpoint of either the health or profitableness of the flock. Roomy, airy, storm and rat proof coops for the young stock is absolutely essential to the successful raising of a fine bunch of youngsters, that will make money for their keeper. Overcrowding of the growing stock in filthy, poorly ventilated coops is one of the causes of poor success on many farms. And coops which do not protect the chickens from driving storms and the nightly raids of rats and skunks will usually have very few occupants in the fall, when the young stock are ready to be placed in their winter quarters. Many of the failures in getting eggs in the fall and winter months from the hens, is due more to neglect in regard to this matter of housing the laying stock than in anything else. The young stock that has been properly cared for on the range during the summer, cannot stand close housing in their winter quarters in the fall and early winter months. Doors and windows should be protected with inch mesh wire netting so they can be left open to give the hens fresh air night and day, in mild weather, whenever there is not danger of its getting cold enough to freeze their combs. The laying stock must be protected from sudden changes in temperature or feeding; this is imperative, to the best results in egg production, no matter what other rules may be disregarded. And even the chill resulting from giving real cold water to the layers in winter will have a strong tendency to retard laying. For best results the water should have the chill taken off. Every little detail which adds to the comfort of the hens is important in obtaining the maximum amount of winter eggs.

MARKETING.

The marketing of the poultry products is by no means the least important thing in the profitable management of the farm flock. The amount of profit derived from the flock will depend on whether their product is dumped promiscuously on the common market to compete with and bear the suspicion and censure attached to the poorest quality of scrub poultry and stale eggs, or properly and neatly prepared and sold as fancy dressed poultry and fresh table eggs. Properly fattened and neatly dressed poultry of good market quality will readily sell almost anywhere at a very considerable advance over the common market stock. Strictly choice dressed poultry is the result of careful selection and systematic breeding for the best possible development in plumpness of breasts, wide deep bodies and a generally well rounded, attractive appearance. I am living in a village of only about six hundred people, yet with my strain of White Plymouth Rocks, which have been carefully bred for market quality, I am able to get

Too Late to Classify.

SINGLE COMB White Leghorns, celebrated Van Dreser strain. World's record winter layers. Fine early broilers. Eggs \$1 per 15, \$6 per 100. White Star Poultry Farm, South Amboy, N. J. 1-2

WHITE PLYMOUTH ROCK COCKERELS, pure Fishel direct. From Fishel's best stock, price \$2, \$3, \$5, \$7, as some ask \$10 to \$20 and \$25. Fine shape, yellow beak and legs; white as snow. WAINRIGHT LEA, R. F. D. No. 2, Brooksville, Ky. 2-3

It is Pratt's Animal Regulator.

Made by Pratt Food Co., Phila. Over 30 years old.

five cents per pound above the retail market price for all the dressed poultry I have to sell and could sell several times as much as I do, if I was in the market poultry business. And the principle holds good in almost any place in the marketing of a choice quality of fresh table eggs. The possibilities in the sale of a fancy article in poultry products at remunerative prices is far beyond the conception of many farmers who have been content to drift with the crowd and take what the general market would give them for their products, as they happened to reach it. To a greater or less extent all poultry products bear the suspicion attached to the article of poorest quality, until they have established a reputation for superior quality. Naturally, therefore, the poultry keeper who is working for the best prices must be content to go a little slow, until his goods have been introduced to the public and established for themselves a reputation that will command and hold a regular trade at top prices.

PROFITS.

The profits from a small flock of fowls is proportionately greater than it is from a larger number, especially on the farm where the birds are allowed free range the greater portion of the year, owing to the greater proportion of food picked up on the range by each hen of the small flock, than would be the case where a larger number of hens occupied the same ground. The profit to be derived from a farm flock will depend a very great deal on the breeding of the hens that are kept, but with a good stock of fowls properly fed and housed, the profits will be most encouraging and considerably greater than where all food is bought at retail market prices. Hens which have been carefully selected and systematically bred for layers can easily be got to lay upwards of an average of one hundred and fifty eggs per hen in a year with reasonably good care and feeding, and on the farm where expenses are reduced to the minimum and all food furnished at first cost, it should not be difficult to make each hen of a small flock yield a profit of two dollars or more a year. Some flocks have done considerably better than that, where a few of the best cockerels were sold at one dollar and a half and two dollars each for breeding purposes, but such sales should be made in the fall to make it pay, for good sized Plymouth Rock cockerels of good market quality, dressed and put on the market in attractive condition will readily sell for one dollar each and cockerels will eat as much or more feed than laying hens during the winter while producing nothing. One of the products of the flock that is of no little value to the farmer is the poultry droppings, which can be scattered thinly over the garden or grass lot and thoroughly incorporated into the soil by a thorough harrowing of the land. Treated in this way they are one of the most valuable fertilizers on the farm. By planting

the poultry yard to plum trees the ground will not be given exclusively to the fowls and the plum trees will be kept pretty nearly free from injurious insects by the flock, and being systematically fed by the droppings from the hens will bear remarkably good and regular crops if the location is not an unusually unfavorable one for hardy fruits. A small flock of fifty hens, bringing in an annual profit of from seventy-five to one hundred and twenty-five dollars would be quite a lift towards independence on many farms, and it is easy within the reach of any farmer who will get the right kind of hens and give them the right kind of care. There is no stock on the farm that will more quickly respond to good care and proper attention or yield a larger profit for time and money invested than a well bred flock of pure bred poultry.

VICTOR D. CANEDAY.

Taylor's Falls, Minn.

It isn't at all surprising to those who are familiar with incubators and brooders that the Gold Medal—the highest award—of the great St. Louis World's Fair was given to the Reliable Incubators and Brooders. The jurors who made the awards were experts on artificial incubation and they readily recognized the superiority of the Reliable machines. Their award was for an incubator of highest hatching efficiency. The double-heating, double-ventilating features of the Reliable are such pronounced improvements that the judges could do nothing else but award the Gold Medal as they did.

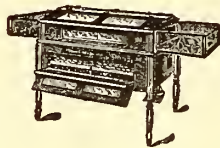

Twenty years of experience in the building of incubators and brooders are crystallized in the Reliable of today. The secret of their success is that the builders have kept "results" ever in mind. They have no "hobbies" to overcome. They have improved here and discarded there until they have attained very near to perfection. As a result the Reliable is universally known as "The World's Favorite."

In buying an incubator you don't care to buy a lot of theories; what you want is a reliable, sensible hatching machine that will hatch the highest percentage of strong, healthy, vigorous chicks that will live and grow into money with the least trouble and expense to you.

The Reliable Incubators and Brooders are so simple and the directions so comprehensive that any one with the least bit of "gumption" can operate them and make money from the start; while the expert who examines them critically is delighted with them, and finds all that advanced science can suggest for effectiveness, simplicity

and economy embodied in Reliable machines. The Reliable Incubator and Brooder Co., Box A1, Quincy, Ill., have issued an exceptionally valuable catalogue of their wares. It also contains a lot of poultry hints—a book easily worth 25c. They will be glad to send you a copy on receipt of 5c in stamps to pay postage.

B. S. Beckington of Garden Prairie, Ill., has 500 birds for sale, and also will take orders for eggs. He has been a successful prize winner, and has never had a better lot of poultry than now. He breeds Brahmas, Langshans, Buff Cochins, Rhode Island Reds, S. C. White, Buff and Brown Leghorns, B. B. Red Games, Black Minorcas

and Pekin Ducks. He aims to send out the money's worth or more to each customer, and more than satisfies them. He has hundreds of fine Cocks and some Yearling birds that will score way over 90 points, which certainly should do someone good.

Floyd C. Tabor of Worcester, N. Y., has a change of ad this month in an increased space, advertising his 200-egg strained Rose Comb Brown Leghorns. His New York winnings of 1905 were especially fine and were as follows: First Cockerel in the strongest competition of Rose Comb Brown Leghorns ever shown at the World's Fair Show, St. Louis, fourth and sixth hen, sixth pullet, second pen. At Central New York Fair, first and second cock, first and second cockerel, first and second hen, first and second pullet. At Binghamton Industrial Exposition, first cock, first cockerel, first pen. A catalogue will be sent on request by mentioning the AMERICAN POULTRY JOURNAL. Mr. Tabor recently bought of Henry Steinmesch of St. Louis all the Rose Comb Brown Leghorn females shown by Mr. Steinmesch, winning prizes at the World's Fair, St. Louis, Oct. 25, 1904.

Dr. N. E. Mighell, Marshalltown, Iowa, breeder of Light Brahmas and Partridge Wyandottes, reports the following winnings for the past year: On Light Brahmas at World's Fair: 1st, 3d cock; 4th cockerel; 5th, 6th, 7th pullets. At Chicago: 1st, 3d cocks; 1st, 3d, 5th hens; 1st, 2d, 3d, 4th cockerels; 1st, 2d, 3d, 4th, 5th pullets; 1st pen. At Topeka, Kan.: 1st cock; 1st, 2d hens; 1st, 2d, 3d cockerels; 1st, 2d, 3d, 5th pullets; 1st, 2d pens. At Polo, Ill.: 1st cock; 1st, 2d hens; 1st, 2d, 3d cockerels; 1st, 2d, 3d pullets; 1st pen. Showed at Topeka and Polo at the same time. On Partridge Wyandottes—At Chicago: 1st, 2d cocks; 1st, 3d, 5th cockerels; 2d pullet; 5th hen; 2d pen. At Topeka: 1st, 2d cocks; 1st hen; 1st, 2d, 3d cockerels; 1st, 2d pullets. In competition with some of the best of the country in both places.

Klein & Anderson, Macon, Ill., have been very successful in their show winnings since the first of September, 1904, winning in all 120 premiums at the Illinois State Fair and in southern expositions. At the St. Louis Exposition they won on Cochins 3d, 4th, 5th hen, 6th cock, 2d pen. At the Peoria State Show they won 2d, 3d, 4th Barred Rock, 1st pen and special for the ten highest scoring females. On Partridge Cochins 3d, 4th on cock, 1st, 2d, 3d, 4th hen, 2d, 4th cockerel, 1st, 2d pullet, 1st, 2d pen.

Kills and expels worms Pratts Vet. Worm Powder.

Made by Pratt Food Co., Phila. Over 30 years old.

SINGLE COMB WHITE LEG-horns exclusively, free range, Wyck-off strain, headed by prize-winning cockerels. Fertile eggs. My best mating eggs, \$1.25 per 15; \$3 per 50; \$5 per 100; \$20 per 500. Satisfaction guaranteed. E. E. WISE, 2-3 Route 1, New Brighton, Pa.

ROSE COMB AND SINGLE COMB Minorcas. They are winners. At Michigan State Show, on six entries, we won five prizes; Ann Arbor, 16 out of 24. Eggs \$2 per sing. Stock for sale. WAGNER BROS., 2-3 Ann Arbor, Mich.

80 Bu. Macaroni Wheat Per Acre,

introduced by the U. S. Dept. of Agr. It is a tremendous cropper, yielding in good land in Wis., Ill., Ia., Mich., Ind., O., Pa., N. Y., 80 bu. per acre, and on dry, arid lands, such as are found in Mont., Idaho, the Dakotas, Colo., etc., it will yield from 40 to 60 bu. This Wheat and Speltz and Hanna Barley and Bromus Inermis and Billion Dollar Grass, makes it possible to grow and fatten hogs, sheep and cattle wherever soil is found.

JUST SEND 10c AND THIS NOTICE

to the John A. Salzer Seed Co., La Crosse, Wis., and they will send you free a sample of this Wheat and other farm seeds, together with their great catalog, alone worth \$100.00 to any wide-awake farmer. [F.P.]

MILLS' 1905 Seed, Plant and Poultry Catalogue

IS NOW READY. Best one we have ever issued. Many novelties just out. Choice new flowers for the ladies. Thousands of thoroughbred fowls, also eggs for hatching of over 20 varieties. One of the best INCUBATORS built, used exclusively on our farm. Many Great Bargains of all kinds which will interest you. Our "Lesson on Vegetables" is something new and very interesting. This new catalogue is free to any one, and if you mention this paper we will send you a sample packet of very choice new Sweet Corn free for trial. Will not be offered until next year, but earliest corn in the market. Worth dollars to you. Send for catalog to-day.

F. B. MILLS, Seedsmen, Box 40 Rose Hill, Onondaga Co., N. Y.

A NEW POULTRY BOOK.

Especially Written and Designed for the Beginners—Mr. Clarence Ward is the Author—Sent on Approval.

Last month we gave a hasty review of a new poultry book, entitled "Successful Poultry Culture for Pleasure and Profit," by Clarence Ward, proprietor of the Congress Park Poultry Yards, of Congress Park, Ill. We have since then given this book a more careful perusal and find it to be one of the best books for the beginner in poultry culture that has come to this office for some time. It is verily a gold mine of valuable information on this subject and we believe it will prove to be a gold mine to anyone following its instruction, as it is both practical, up-to-date and scientific.

The book treats at length on the great profits in poultry culture, citing many cases where splendid incomes have been made from this fascinating business. It is a well established fact that there is big money in poultry culture. There are thousands of men and women who are earning princely incomes from it, while there are many more thousands who are making a snug little income every year conducting it as a side issue. To make from \$100 to \$1,000 clear profit every year, just in the spare moments, is no small matter with most people. And yet there are thousands who are doing this very thing raising poultry, and this same thing can easily be accomplished by anybody who will conduct it in an intelligent manner. It is just for this latter class that Mr. Ward has designed his book and by following its simple instructions success will be sure and the profits large.

SENT ON APPROVAL.

Mr. Ward wants every beginner to read his book, and is willing to send it free on ten days' approval to every man, woman or boy interested who will take the trouble to write to him for it. In order to assist our readers to get this book on approval we print the following coupon, and advise our novice friends to fill it out, cut off, and send it today: Congress Park Poultry Yards, Clarence Ward, Prop., Congress Park, Ill.

Enclosed find 4c in stamps for which please send me on approval, your new book, "Successful Poultry Culture for Pleasure and Profit." If I want the book I agree to send you 50c for it. If I don't want it, I agree to return it to you within 10 days.

Poultry Supplies.

As we are the largest as well as the oldest dealers in poultry supplies west of the Mississippi river we can offer many items of interest to poultry breeders. We also handle thoroughbred poultry and EGGS FOR HATCHING. Don't fail to send for a copy of our new illustrated price list. Complete catalogue of seeds, plants, etc., also free if you mention this paper. Write at once. IOWA SEED CO., DES MOINES, IOWA.

S. C. B. Minorcas

—AND—

R. C. BUFF ORPINGTONS

World's Fair prize winners. Stock for sale. Eggs \$2 to \$5 per sitting. Incubator eggs, \$6 to \$10 per 100. Write for circular.

ROSEDALE POULTRY FARM G. M. SHOOK, Joplin, Mo.

What Wm. Ellery Bright is Doing.

Wm. Ellery Bright of Waltham, Mass., never had so many fine birds at one time, and is having splendid trade. He sold his first prize St. Louis Exposition Single Comb Brown Leghorn Pullet for \$100.00, and a good number of other Leghorns and Barred Rocks at good prices, but what pleases Mr. Bright most is that his birds have been going to some of the old and well known breeders, which have not only pleased them, but have won prizes for them.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—Please answer the following questions in your question and answer column:

1. What should be the size of a winter poultry house for 75 laying hens?
2. What kind of feed should be fed in the morning, at noon and at night for a flock of laying hens to produce the best results?
3. What is the best remedy for head lice on chicks?
4. Would it be better to cook beets, cabbage, etc., for poultry or feed raw?
5. Should laying hens be fed all the corn they will eat at night?
6. What is the best feed for young chicks?

N. B. M.

Lamar, Col.

1. A house 18x30 will accommodate 75 laying hens very nicely.
2. A warm mash fed in the morning is advocated by a great many breeders. This mash can be composed of bran, chopped feed, clover meal, kitchen scraps, etc., and mixed with water or milk and fed in a rather dry state. At noon dry wheat is the best. In cold weather a full feed of whole corn should be given.
3. We have found lard and kerosene oil very effective for head lice on chicks.
4. Cabbage is best fed raw; beets, turnips, etc., may be cooked and mixed with the mash.
5. In very cold weather. In warm weather wheat is better.
6. Most breeders advocate a dry grain feed for young chicks, made up of various small grains, or use some one of the various chicks' foods advertised in these columns.

EDITOR AMERICAN POULTRY JOURNAL:

Please answer the following in your question and answer department:

1. What is the matter with my S. C. B. Leghorn pullets, they appear in very good health, except when they drink it seems to gag them. One breathes through her mouth all the time. Could this be a case of crop bound?
2. Would it be a good plan to floor about two-thirds of a poultry house and leave the remainder for a scratching bed?

E. M. N.

Parkville, Mo.

1. Your description is too indefinite for an intelligent answer.
2. No; the part you put the floor on would be a harbor for rats.

Buff and White Orpingtons
BUFF LEGHORNS

Good breeders for sale, one and two years old. Also young stock from imported prize-winning strains. Satisfaction guaranteed.

F. A. CRGWELL, - Granger, Minn.

The Leghorn is not a desirable broiler breed, owing to the difficulty in getting it into a plump condition at a profitable age. It requires fully four weeks longer to get it to the desired weight than it does our American breeds, but when it is there it is a fine breasted and attractive looking carcass.

The three grains that should go each day in the winter bill of fare are wheat, oats and corn—and their by-products; bran, middlings, ground oats and cornmeal.

J. A. Bailey of Denver, Colo., won at the show January, 1905, on S. C. Brown Leghorns, 1st cockerel, 2d pen and silver special for the best cockerel of any breed in the show.

Prevents and cures cholera

INTERESTING POULTRY CONTEST.
\$700 IN PRIZES

That progressive Poultry Journal, COMMERCIAL POULTRY, is now conducting a very interesting poultry contest. They will give \$700 in prizes to those writing the best articles on the subject of "Care of Little Chicks." Every reader of this Journal should write Commercial Poultry, Inquiry Dept. 102, Chicago, and secure free, the particulars of this Contest.

CYPHERS INCUBATOR CO.'S NEW CATALOGUE.

We have received a copy of the new catalogue from the Cyphers Incubator Co., of Buffalo, N. Y. This is certainly a mammoth catalogue and should be in the hands of every reader of the AMERICAN POULTRY JOURNAL. An illustration of the front cover is reproduced below.

The Cyphers Incubator Co. have spent more money on this catalogue than on any of its predecessors. They are issuing 110,000 copies, 90,000 copies for domestic circulation and 20,000 copies for foreign distribution. The complete book consists of 228 pages and cover and is 8x11 inches in size and weighs 1 1/4 pounds. The total edition requires more than 130,000 pounds of paper or four and one-third carloads, 30,000 pounds to each car. These books cost them 18 cents per copy in one hundred thousand lots, and the postage is 10 cents per copy. In other words, it costs them approximately 30 cents, envelope and handling included, to place these catalogues in the hands of persons who ask for them in response to their advertisements, exclusive of the cost of the advertising.

This company at its Buffalo factory is now manufacturing an incubator complete every four and one-third minutes. Additional to this they are manufacturing hundreds and in some cases thousands of smaller articles daily. At present they have on their pay-roll more than 400 persons. This illustrates clearly to our readers how they have been able to reduce the price on their machines, as related in their advertisements, and still keep up the quality.

The capacity of their new poultry food, clover and alfalfa mill at Kansas City, Mo. (floor space 30,000 square feet) is 90,000 pounds poultry food per work day of ten hours, and 10,000 pounds of cut, meal and shredded clover and alfalfa, about four carloads daily.

No doubt our readers are well aware that there are now more than one hundred companies and individuals in the United States alone who are engaged in the manufacture of incubators and brooders, whereas the number engaged in the manufacture of various poultry supplies probably approaches one thousand. Truly the poultry business has become a great industry when we consider it in all of its far-reaching branches.

Readers will be especially interested in the photographic full page illustrations of poultry editors, fanciers, judges, etc., which appear throughout the catalogue. The catalogue is now ready for mailing and can be secured by writing for it and mentioning AMERICAN POULTRY JOURNAL, and by ad-

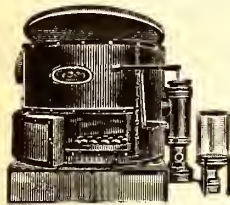

dressing Cyphers Incubator Co., at any one of their offices nearest to you, viz.: 310 Fifth avenue, Chicago, Ill.; 34 Merchants Row, Boston; 23 Barclay street, New York, or Buffalo, N. Y.

The Rose Comb Black Minorcas exhibited by S. T. Campbell of Mansfield, Ohio, at the Coliseum, Chicago, in January, 1905, were a fine lot of birds. They had the fine head and comb so characteristic of Mr. Campbell's birds and good typical Minorca shape. Besides winning at the Coliseum, he has won at Madison Square Garden, New York; Rochester and other shows. His Trap Nest Records demonstrate his birds to be, as he claims, the greatest in existence. His is a strain with a record of over 247 eggs per hen a year.

John J. Keig & Son, Lockport, Ill., breeders of Buff Plymouth Rocks, writes that at the November Chicago show they won 3d cock, 1st hen, 2d cockerel, 2d and 5th pullet and 1st pen.

The advertisement of the Cousins Automatic Egg Turning Tray for Incubators will be found in another column. Mr. Cousins writes us that he has made trays for nearly all makers of incubators and has shipped them to every state in the union and to many foreign countries. He has received many flattering testimonials from those who have used them. He claims that his tray increases the hatch of all incubators for the reason that it turns all sizes of eggs alike and holds them in proper position. It also increases the capacity of many machines. He states that his business is opening up better this season than ever before, having recently received orders for 157 trays in one day.

Another interesting analysis given is that, compared with well-rotted barn manure, there are 48.60 pounds of phosphoric acid in hen manure to 6 in barnyard manure; 41 pounds potash to 10 in barnyard manure, and 67 pounds nitrogen to 11 in barnyard manure. The analysis is based on a ton of hen and barnyard manures.

AXFORD INCUBATORS

Have stood the test 30 years. First Diploma 1875. Gold Medal 1879

The only PROPER MOISTURE INCUBATOR on the market. BUILT ROUND. Cut out the corners—you have no cold eggs. Catalogue if you ask.

"CARE OF THE LITTLE CHICKS"

\$700 CONTEST

To more widely advertise COMMERCIAL POULTRY we offer prizes amounting to \$700 for the best articles on the following subject: "Care of Little Chicks." First prize, \$500 piano; 2d prize, \$50 in cash; 3d prize, gold watch and chain (any style or movement); 4th prize, genuine diamond (ring or pin); 5th prize, \$15 cash; 6th, 7th, 8th, 9th and 10th prizes \$5 each; 11th 12th, 13th, 14th and 15th prizes, \$3 each. Contest closes March 15th, 1905. Articles must not exceed 750 words. Prizes awarded immediately afterward by a committee of three disinterested poultrymen. We retain the privilege of publishing all competing articles. Only condition: Every article must be accompanied by 50 cents to pay for one special new or renewed yearly subscription for COMMERCIAL POULTRY, the brightest, neatest and most practical poultry paper published. Circulation now over 40,000 copies each issue. Sample copies of COMMERCIAL POULTRY, also names of winners in our other poultry contests and further particulars sent free on request. We have distributed \$2000 in cash prizes during the last eight months. Write for further particulars to-day.

COMMERCIAL POULTRY, 67 Washington St., Contest Dept. 202, Chicago

SATISFACTION

Isn't this enough for any man to expect?

Matthews, Ind., Dec. 11, 1904.

Dinsmore & Co.

Dear Sirs:—The one hundred White Wyandotte eggs I bought of you proved the best investment I ever made. I hatched fifty-three nice chicks. I have just returned from Marion poultry show, where I won 1st, 2d, 3d cockerels, 3d pullet, 1st and 2d pens, seventeen specials and \$10 silver cup for best display of any one variety. If you will sell me eggs the same price I will take 500 or 1000 next spring. Wishing you success I am

Yours truly, R. B. LITTLE.

We have ten grand pens mated for best results, and we guarantee our eggs to be 75 per cent fertile. \$2 per 15, \$10 per 100.

Hillcrest Poultry Yards

Dinsmore & Co., Props. Kramer, Ind.

Try the New

Majestic Tomato

The greatest vegetable novelty of the season. By all odds the largest, finest flavored and most productive in existence. Thousands of our customers who received small trial packages last spring wrote us in the fall that it surpassed all other sorts and produced 100 lbs. to 147 lbs. of fruit to the plant. Many reported single tomatoes, weighing 3 lbs. to 5 1/2 lbs. each. Just think what this kind of a crop would mean on an acre of ground. The fruits are not coarse grained and poor like other large sorts, but are smooth, solid, have few seeds, and are unsurpassed in quality. Of fine shape and beautiful color. Last year the seed sold at 40c per packet of 100 seeds, but this season, we have reduced price to 10c, and in addition to this are offering

\$100.00 in Cash

prizes this year for the

largest tomato grown.

Our large illustrated cat-

alogue describing the above

and many other choice novel-

ties will be sent free if you

mention this paper.

IOWA SEED CO.,

Des Moines, Iowa.

A BEGINNERS EXPERIENCE

Two years ago about this time the first symptoms of the "fever" began to trouble me, and in a short time a genuine case was developed. Those about me soon discovered what was ailing me and certain ones in the distance learned of my case and were delighted. My mail suddenly began to increase—stimulating literature and letters arrived informing me what to do. The "fever" grew apace, feeding upon descriptions of money-making poultry plants, detailed accounts of individual success with hens, until one day in late March there came a notice from the express office that an incubator was there for me. A four-horse team was necessary—not because of great weight, but deep mud, to land that machine. Then a little later a load of new lumber—a new saw, hammer and other things. In the meantime the new incubator had been very carefully unpacked and set up. The directions for operating were most conscientiously studied—then the lamp was lighted and after a study of the machine for a day or two some 175 eggs I had obtained from the neighbors for a first hatch were consigned over to fate or fortune I couldn't tell which. Before the hatch was due my first house was up and a home-constructed brooder installed within. This brooder has been a success from the first and I would gladly enlarge upon it here but for lack of space—and descriptive powers. But to my surprise instead of 175 disappointments as I had feared, my care and travelling was rewarded with a first-class hatch of 89 chicks from 122 fertile eggs. And I

raised them all but five.

Another notice from the expressman informs me that a package of eggs awaits me. Several western breeders of White Rocks had heard of my ambition to start a poultry plant and all had written encouraging letters. One of the specialists now had my first order and the eggs at the office were from his pens. He had written me the best letter. One

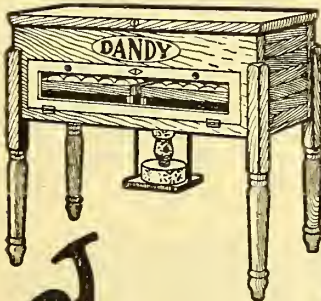

WHITE WYANDOTTE HEN
Score 94½ points. Owned by Warren Sloan,
Eldorado, Ill.

hundred jewels—no ordinary eggs were these—were to be entrusted to the "big red hen" as we had come to call the incubator. My cares and anxieties were now beginning to double up—a machine still full of mystery working on my valuable eggs and an untried brooder working

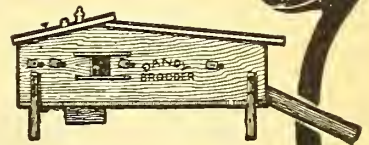

at the destiny of my first hatch of little chickens—these things were well calculated to drive dull care away as it often exists in the winter on some farms. In fact this was exactly one of the motives that started me to raising chickens—to have something worth while to do in the winter when time drags heavily if one hasn't enough work to keep him awake and healthy. My expectations in this respect have been more than met. If you want to get busy just launch out into this business of raising chickens by artificial means, determined to succeed. If you have it all to learn as I had you may wish sometimes that you had undertaken something easier. But the beginner can have plenty of informing literature and if he be willing to learn can acquire a great deal of information in a short time. As for myself I thought there was no other way to succeed, so I read and reread the best things I could get bearing upon this many-sided subject. Experience is the great teacher here and a great amount of this may be had in the first season's effort if you are ambitious.

In my investigation of the merits of the various breeds I had decided on the White Plymouth Rocks and the White Wyandottes and I believe now the choice was a wise one for me. About the time the 100 eggs I have spoken of were due to hatch I made another trip to the express office for another package of eggs. These came many miles and to my mind were very precious both because of what they cost me in dollars and cents and from the latent possibilities with which my imagination had endowed them. These were to start me with the Wyandottes and were endowed richly with the brood-to-lay idea. The birds from these eggs

They're all Dandys

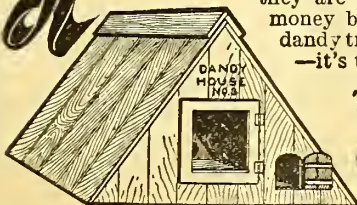

That's what users call them. They are all so simple and effective that beginners are successful from the start and raise "dandy" chickens that bring "dandy" prices with very little trouble and not much labor. The Dandy Incubator—the latest addition to the dandy line—is a new departure in incubators. It is the simplest to handle and operate, the most unique and effective hatching machine ever constructed. Possesses a number of features never before embodied in an incubator. The greatest of these is the heavy one-inch walls of kiln-dried white pine with a one-inch lining of soapstone between. Soapstone holds heat better than any other known substance suitable for such purpose, consequently the

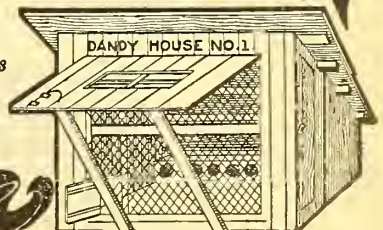

DANDY INCUBATOR

may be operated with a much less lamp flame than any other, at the same time it is better able to stand sudden changes of temperature. It may therefore be run in almost any sort of an outbuilding, does not require a specially constructed incubator house or cellar to insure successful hatches. Another marked improvement is to place the entire regulating apparatus in a compartment within the machine which may be locked up when properly set, and cannot be tampered with or changed accidentally. The Dandy Incubator has many other improvements all fully set forth in our new catalogue. Dandy Brooders, Dandy Portable Poultry Houses, Colony Houses, Exhibition Coops, Trap Nests, etc.,—the best line for practical poultrymen and beginners ever built. Each and every one of them has features different, and we think better than all others. Write for free catalogue and let us tell you why we think they are better, and why you can save money and make money by using them. Send for catalog today—now's a dandy time to get it, and get ready to raise a lot of early birds—it's the early birds that bring the best prices.

THE DANDY POULTRY NOVELTY CO.,
Box 23, DANVILLE, ILL.

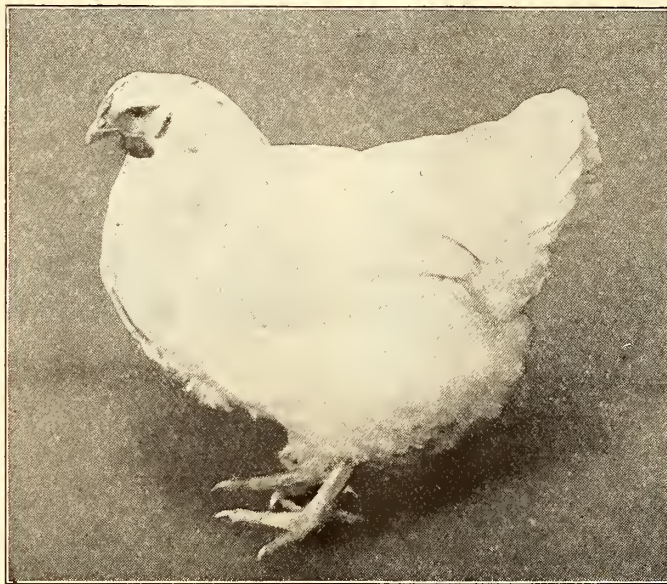

were to be especially business birds. They were to lay eggs and lots of them because they had been born and bred to do so for years. And they have not disappointed me. I firmly believe the trap nest and the careful keeping of individual records with a view to developing a strain of great layers is destined to work great things for the breeder who will devote the extra time and care involved.

The end of my first year's work found me possessed of some valuable information and several score of good looking grown-up chickens. Most of my time had been given to the routine work of a 120 acre farm, but I had been as faithful—almost—toward this side issue I had taken up as though it had been my sole occupation. The incubator had "swarmed" four times and the brooder had taken care of all, doing double duty and more under the stress of circumstances. I will not state here how many eggs went to the enrichment of the garden, or how many chicks fell by the wayside, except to say that there was enough of this to try my courage. But the beginning of the second year found me with a good start in thoroughbreds and a purpose to expand—more fixtures and more houses must be secured. A second incubator arrived in due season, larger and very unlike the first one. My faith in these machines was now well grounded and the new one was less mysterious to me and was more tractable than the first one. Confidence in my self-made brooder prompts to the making of two more with some improvements over the first. I believe the plan of my houses for the breeding pens will interest the beginner as well as the average egg-farmer. So I give it here: The house is 24 feet long and 7 feet wide, 5 feet in the rear and 7 feet high in front. It is made of matched lumber and covered with Swann's extra heavy felt. The sun has a chance at this time of year at every square foot of the floor except a little of two corners, the windows extending from the floor half way up and taking the central 12 feet of the south side. The door is at the east end and is provided with an inner door made of canvas

which is used in mild weather, the outer remaining open insuring a well-ventilated house. The roosting quarters are in the west end, with nests beneath dropping boards. A curtain is provided for use on very cold nights making the place quite comfortable indeed. This end of the house is lined inside. I find this to be a cheap house, easily constructed and very convenient. All but 6 feet on the west end constitutes a scratching shed and is bathed in sunshine these winter days all day long.

looking steadily up. The egg basket is now level full and is worth \$3.08 at present prices.

Have I been rewarded sufficiently for my time, labor and moneys expended? My experience during these beginning years as an investment in further developments is invaluable. My present equipment in fixtures and stock is worth several hundred dollars, not to mention the sale of stock and eggs last year and this to the amount of \$125. I am quite satisfied with the venture, and I hope the

A winning White Wyandotte Pullet at the World's Fair Poultry Show, St. Louis, Mo., Owned by Ira C. Keller, Prospect, Ohio.

The layers are happy and are laying eggs every day and lots of them.

During the second year ending now, I have raised over 500 chickens and have now a fine lot of attractive looking birds—birds I know will more than meet my expectations in every way. I have 100 pullets that are beauties and they are now doing business in the way that delights one when the egg market is

time may come when, in a better location, I can devote my whole time to this work.

(Established 1817.)

LOUSE SOLUTION.

Knowing that all poultry fanciers and chicken cranks suffer more or less from chicken lice and mites and appreciating the fact that it requires an immense amount of labor as well as some money every year to battle with these pests, I offer the following narration from my own experience after years of study and deliberation. I know that the reader of this article will at once pronounce me a crank but this will not change facts in the case. All improvements and all progression has been made by cranks who have studied and experimented on a certain subject until people have pronounced them insane on this certain subject. I expect all this when this article comes before your readers.

Now we start out with this assertion and court successful contradiction. There never was or never will be a louse or a mite on a healthy fowl. The old remark that "my chickens have lice and they are killing them" is as *erroneous* as it is *ridiculous*. The fowl becomes diseased from injury or lack of proper food and housing and no sooner does this occur than nature begins her work of forcing the poison from the system through the skin of the fowl and nature at once creates multitudes of the scavengers to consume this poison and restore to health the sick body of the fowl. In animals and human beings this is worked off through the agency of the kidneys but with fowls it must exude through the skin. I have had lice on a pen of Wyandottes and on no other pen on the premises, and I find that my S. C. B. Leghorns are seldom troubled with lice or mites. *Why?* because they hustle and if I do not furnish them with the proper food they hunt about the premises until they find it, aside from this breed, I find that my S. L. Wyandottes and White Wyandottes, without a balanced ration especially green bone and plenty of grit, will become diseased and then look out for lice and mites.

You may take a new poultry house with all new and improved apparatus, clean and sanitary food troughs of galvanized iron, metal drinking fountains. Keep them sweet and clean, give your chickens nourishing, but clean sweet food as I did and for two or three years you will never see a louse or a mite, and all at once you find myriads of lice or mites in your house and nest boxes and on your fowls. Where did they come from? Do you think they came in flocks like birds and stopped at your particular house instead of your neighbor perhaps only a few rods away? Were they hidden in your new material from which you built your plant and waited patiently for two or three years for you to get a fine lot of show birds and then come forth and commit their depredations? Why should they have a grudge against you in particular? When you set quietly down and look after the cause of things you will make up your mind that sick chickens cause lice and mites and not lice and mites sick chickens. Then instead of smearing your house up with liquid lice killer and insect powder you will do as I have done, get out among your fowls, look them over carefully and set to work to giving them a change of diet, something they have not had in sufficient quantities, green bone, green food, grit or something, you can find out what is lacking if you think and you will find that soon all traces of lice and mites will dis-

appear. *Why?* Because they will have nothing on which to feed as soon as the fowl ceases to exude poison through their skin the insects will *starve to death* and mingle with the dust. They have performed the work they have been created to do and their mission is ended.

Wishing all my brethren a happy and

prosperous New Year and admonishing them once again to seek the *cause* of everything pertaining to poultry before they treat the *effect*. I submit my case to the jury of chicken fanciers and await their verdict.

L. H. NUTTING.

Kenilworth Poultry Yards,
Davenport, Ia.

Free to Readers of Am. Poultry Journal

My Big Illustrated Book on Poultry and Incubators

Wouldn't You Like to Run

a poultry business that would really pay? One out of which you could pull several hundred dollars each year. A small gold mine on your farm with no big sum of ready money needed to invest. Of course you would if you could. You can know how if you will try.

The First Step

is to get my illustrated book. It contains no exaggerations. It does tell some simple, straightforward stories of how a lot of other people made good tidy sums keeping chickens. They had to have an incubator. They found that my Globe Incubator helped them make this money. In fact, they could not have made their business pay but for it.

There Are Many Good Reasons

why you should have this book. Not because it's free. Not because it contains an almanac for 1905 and many interesting photographs. Not because it tells all about how I make the Globe. Those are some good points about it. But because by reading it over carefully and profiting by what others have done and are doing you can avoid mistakes so

common in poultry raising and really succeed in making a nice thing out of your poultry business.

You Won't Be At Sea

about what incubator to get if you read the book. That alone is a good cause for getting it. Don't make the mistake and think any old hatching machine is good enough. You must have the best machine—and you can't get one better than the Globe. I won't give all the hackneyed statements that my machine is the best, that it has them all beat and that no others are in it. I will say that it is the simplest to understand and to run. It couldn't be made better. The regulator is as good as any and can be depended upon to keep the temperature right day or night. It will hatch every fertile egg because that's its purpose and that is what it has to do. And that is all you want of an incubator.

Let Me Tell You All

about it in my book. Send for it today and then you will send for a Globe. Thirty days' free trial if you doubt its being the machine you want.

C. C. SHOEMAKER,

The Man Who Raises common scrubbs doesn't make the big money in the poultry business. You must have good stock and eggs. You must get them from a thoroughly reliable poultry breeder. I run one of the biggest and best equipped poultry plants in the States. I am building one of the biggest poultry businesses in the world.

I Wish You Could See My Place

I don't think you can realize how many thousands of fowls and settings of eggs I sell each year. But you can find out pretty quick that they are of good reliable stock. I have sold thousands upon thousands of farm fowls and settings. My customers were pleased because the orders were filled just as they had expected, and because they got a little better quality than they would get anywhere else for the same amount.

In My Poultry and incubator book you will find a good many pages devoted to illustrations and descriptions of the different varieties of farm poultry. You may need some stock or eggs this season. Get the book now and make your selection.

I Have For Sale

thoroughbred Light Brahmans, Dark Brahmans, Buff and White Cochins, Barred Plymouth Rocks, and White Plymouth Rocks, Wyandottes, Leghorns, Minorcas—in fact every breed that you can get anywhere, and it would be strange if I could't suit you better than any one else. The prices are low considering the quality of the stock—low enough that you couldn't afford to place an order somewhere else without getting my list and making comparisons.

I Have Been Advertising

in American Poultry Journal a good many years. If you want to know more about me, you might ask the publishers, or you can ask anyone in the poultry business. Or I will send you references. The American Poultry Journal wouldn't let me have this space if they thought I would not be able to make good on every claim I have made. So you need not hesitate on account of being afraid you won't get just what you order. I take more pride in my friends' and customers' good opinion of the business I am doing than in getting the dollars from subscribers to any farm or poultry paper. So send me a trial order and I will make good. Write today for my poultry and incubator book. It is absolutely free.

Barred Ply. Rocks Exclusively

My breeding yards are represented by birds of royal breeding and grand individuality. **Cockerel matings:** Yard 1 headed by chl, whose sire was a first place winner at Chicago, '03. THE BREEDING YARD.

Facts worth Noting about this Very Important Part of Thoroughbred Poultry Raising.

Written by Rev. C. E. Petersen.

That the "Breeding Yard" is the poultry fanciers stock in trade we are all of us ready to admit; for without it we might raise poultry, but at the same time any definite improvement, as far as fancy points, utility qualities, or both would be very difficult of attainment, if not an absolute impossibility.

That this is not as well known as we might think it is, is seen from what is generally called a Breeding Yard. With very many poultry breeds the breeding yard simply means a half or a whole dozen fowls, containing one male in the flock, the birds may be the result of one or more settings of eggs purchased from some breeder the spring before, and as a good price was paid for the eggs, the birds must out of a necessity be all there is to be desired, that is, thus

very many reason.

Now if nothing else were wanted than a flock of pure bred birds no one could find fault with their reasoning, and we are positively sure that this is all the multitude desire, and all the trouble it cares to take in the matter of raising pure bred poultry. That year after year, eggs from such yards are shipped all over the country, as eggs coming from fancy stock, and as far as it only means from stock breeding true to color, and breed characteristics this also is all right, and mostly gives general satisfaction, where not a great deal of money is expended in the purchase of the eggs. But if this method is employed, with the idea that this is breeding fancy fowls, then such reasoning is very much at fault, as this is all what the market poulterer is doing, he uses pure bred stock, as well as the fancier, with this one exception, that he does not sell his eggs at fancy prices, to do this much more care and selection is necessary, and because of this selection being necessary, a breeding yard is necessary, not the kind of a yard as above mentioned, which simply amounts to the raising of pure bred poultry, but a breeding yard, and all that it includes.

In the jargon of the Fancier, breeding yard, stands for improvement, how often in conversation with a fellow fancier, we have heard him say "I have one of the finest matings you ever saw," or "I wish you could see my breeding yards." What does he mean by this? That he has selected a very few of his very best birds, with some notable improvement in view when he made his selection, and this is what is to be understood by breeding yard, a few fowls put together by an experienced breeder, or by an amateur, Standard in hand, that the output from these few selected birds, may have in greater perfection, what there progenitors lacked, or were deficient in. This is the sole purpose of breeding by selection, improvement always, and nothing but improvement.

We have heard quite frequently about "The unattainable Standard," but there is nothing in it unattainable, it is true that we have all of us our discouragements, but they come to every breeder worthy the name, and who sets before himself a high ideal, which ideal, is always a difficult task to reach, but not by any means unattainable.

"The unattainable Standard?" Well even if it were unattainable, we shall

Blue Ribbon Winners

FIRST COCK and FIRST PEN ON White Wyandottes

AT THE GREAT 1905 CHICAGO SHOW,

Held in the Coliseum Building, *January 23 to 28, 1905*, on *six entries*, I won **1st Cock and 1st Pen, White Wyandottes**, in one of the largest and hottest classes ever shown in Chicago, any variety and any Chicago show. The quality in White Wyandottes at this great show was extraordinary high and it took the

TRADE

MARK

The emblem of high quality
and square, honest dealings.

have the satisfaction, that we did our best to measure up to it, and to do one's best, is all any man can do, and where it is done with an appreciation, of just what is wanted, and that one thing persistently pursued, success will finally crown our efforts, and the needed improvement will be realized. And in breeding, as well as anywhere else we cannot have everything at the same time, nor try to obtain everything, at the same time, for if we do we shall most certainly fail.

It is a comparatively easy matter to keep a flock of average quality up to the average, but when we desire to go beyond the average, then the trouble, the work, and yes, the pleasure begins.

Our ideal is before us, we know now what an improvement we want to make, but to make it, certain strongly developed points are necessary, in fact we cannot make the desired improvement without them, we have a large flock, we will say for the sake of argument, and out of it we proceed to select our breeding yard, the flock looks handsome, never saw a better one, and the work of selection is begun.

One fowl after another is picked up and examined very minutely, and as we proceed, the flock grows less and less valuable.

Here is one bird which has the desired improvement in perfection, but alas, it is so bad in some other respects, that little as our amateur knows about breeding, he knows enough, to know that it would be madness to use it.

Here is another bird, good all around, all that could be desired, but in the particular point I want it is lacking most woefully, no good. And so we keep on, till almost dusk, and out of over 200 fowls we have a few that comes up to our ideal of the desired point for which we are going to breed, and we almost hate to look at the larger half of the flock good as it was a little while ago.

But the end is not yet, for the next day, after another examination, we find still more that will not muster, and as day follow day, our selected birds becomes fewer, and fewer, but at the same time better and better, we find ourselves, quite often in those two or three pens, and it is with almost a heartache, that we pick up another bird, think it over, try to reason, with our selves against better knowledge, drop her on the floor, back again in an hour, how queer it is, but that bird is the first one our eye falls on, we pick her up again, look her over once more, heave a sigh, and then carry her out to the other discarded ones. At feeding times, we linger for a while among the few selected birds, what beauties they are. Next pen containing the birds that we cannot use for breeders, and as we open the door, there stands in front of us the bird set aside in the morning, how she looms up magnificently in that pen, we repent, pick her up again, almost fondle her, and finally put her back again among the selected few.

But that bird is making us uneasy, she goes to bed with us, and in the morning she is our first thought, we again weigh the consequences of our last night's doings, goes out to the pen, takes her out again, to be gone forever. Have you ever had such an experience? If so, you know in part what it is to select a breeding yard, but when done, we have a few birds anyhow, left us, from which improvement may be expected, and what is really worth bearing the name of a breeding yard.

1854 - 1904

WALTHAM WATCHES

ALWAYS FAITHFUL

This Company embodies in its product every improvement known in the watchmaker's art. For that reason the Company can and does guarantee WALTHAM watch movements without reserve and without time limit.

"No. 820" and "V" are two sizes of close-running, durable, *low-priced*, 15-jeweled WALTHAM watches. More than 12,000,000 WALTHAM watches now in service.

For sale by all Jewelers

AMERICAN WALTHAM WATCH COMPANY,

WALTHAM, MASS.

Our February Announcement—Just Read it

EXMOOR FARMS

Puts rock bottom prices on top this month and offers you honest bargain values in Wittman Brown Leghorns and a few other breeds of our 62 varieties. Just read:

BROWN LEGHORNS The undisputed champions. Note, we bred the first prize pullet at Madison Square Garden this year, the seventh year that this line has won first pullet.

FOR SALE—Males, \$4 and \$5 each. Females, \$3 to \$5 each. For prices on birds possessing any particular points of merit write us. Quality beyond question. Numbers limited. Special circular free if you state what you want.

S. C. W. LEGHORNS The Wm. Penn famous strain. We bred and sold several New York winners. Breeders \$2 and \$3 each. Embrace this offer and

BUFF ROCKS The noted Gold Face Strain. Just a few selected hens at only \$3 each. This is a "farceful" proposition because there's "gold" in it and

BLACK HAMBURGS Breeding stock sired by 1st New York cock. Handsome birds. They go at \$2 and \$3 each, and

SILVER SPANGLED HAMBURGS Breeding stock sired by imported cock and from three imported hens. Here's quality that merits your attention, going at \$2 and \$3 each, and

WHITE MINORCAS An extra large egg strain. Pure white propositions at \$2 and \$3 each, and

S. C. BUFF LEGHORNS Hens and cockerels \$2 and \$3 each. Yes, good ones, and now that you have read about our offers write us and we shall explain more fully. No room here for argument but send four cents in stamps for our 42-page illustrated catalogue, and state what breed or breeds you are interested in. Mention this paper and we will mail you, upon request, our special Brown Leghorn circular. Remember we are at your service, so write us at any time. Do it today—tomorrow never comes.

Address all letters to

EDGAR A. WEIMER

Lebanon, Pa.

C. A. DUTTON, Leghorn Specialist and Farm Supt.

We may fail in mating up our birds for best results, but that should be the object of all our matings.

To write a concise treatise on such a subject would mean a poultry book, for it would of a necessity have to deal in part with all our different varieties of poultry.

Our object is to give some general rules to be observed, and which are applicable to all varieties.

One of the very first thing to take into consideration when mating up for best results, is the health of the birds to be thus mated.

I would under no consideration use a bird in this way impaired, or that at any time has shown signs of a failing constitution.

We consider this matter of such an importance, that to us, it would matter very little, how good a bird might be in other respects, as we would not, under any consideration use such a bird for breeding. We have no reason to doubt that a diseased condition of the breeding birds are in most cases responsible for infertile eggs.

Why it is so important to take constitution into consideration in mating up the breeding yard is because that all our future operations depends on this more than on any other thing. As the constitution of the offspring, depends upon that of parents.

This is a fact which is very insufficiently recognized by breeders of fancy fowls, but it ought to be the guiding standpoint in the mating up of the breeding yard.

There is no need for me to explain that the offspring are in everything essential the creatures of the sire and the dam, and of their ancestors, that as a whole

it is predestined by the nature of the germs from the combination of which the chicks emanate what they are, and what they are to be.

If the parental germs themselves are to begin with, possessed of inherited deficiencies, or if they have suffered by injuries so as to affect their breeding qualities, of course only bad results can be expected. The so called "Stunted Chicks" are in most every instance the produce of unhealthy breeding stock.

They were not born to thrive, their inheritance forbid it. We are also confident, that the great problem of how to hinder the annual appearance of "dead chicks in the shell," could be solved by their being positively sure of using nothing but strong, robust, healthy breeding stock.

And as more or less imbreeding must be resorted to where any noticeable improvement is wanted, it can readily be seen of how great importance a good strong constitution in the breeding stock is.

Consumption, roup, bumblefoot, are a few of those diseases most commonly met with, and all of them hereditary, or what the more learned in the matter would say, inherit a predisposition to them.

On the other hand we need not hesitate to use a bird for a breeder who got hurt accidentally. One of my very best males, wrenched his foot, in some way, and has always been lame since. Yet it does not interfere in the slightest degree with his breeding capacity or health.

That the housing of our stock birds has much to do with the general health of them, goes without saying, but here as elsewhere, poultry keeping is not al-

ways practical.

More colds, influenza, and all other ailments has been caused by so called "ventilation," than by any other means.

On fine days open the doors and windows, if so located, (and they ought to be) that both can be left open without causing a continuous draft through the house. In the fall of the year we have about a foot of fine gravel put into each of our breeding houses, and on this foundation, we use a plentiful supply of straw, chaff, or cut hay, this we clean out at least three times a week, and at the same time we clean the drooping boards, and we have no trouble with frosty walls, or damp houses during the winter months.

Our houses are made with a pitch roof, single boarded and shingled, with a good sized window in the front to let in light and sunshine, and here in our cold and rugged old State of Maine, we find this to be all sufficient and with me, have proven itself so, by giving me a lot of healthy, happy, contented, winter laying fowls, and with the kind of a winter, where the thermometer will run down to thirty below zero, and where zero weather, is the rule and not the exception.

With this kind of housing, and without any direct ventilation, we have never had a single case of roup in our flocks for more than 12 years. There is nothing that succeeds so well as success, and therefore we will continue in the same old fashioned way, giving little thought to the subject of ventilation, by improved methods.

We believe in fresh air, outside the house, and in it, for the maintenance of a strong robust constitution, and healthful exercise.

SECOND HAND CYPHERS INCUBATORS FOR SALE CHEAP

I have a large number of No. 3—360 egg size Cypher Incubators, manufactured by the Cyphers Incubator Co., Buffalo, N. Y., which I have taken to accommodate large operators who have installed Model Incubators (manufactured by me) in their hatching rooms. I will sell these Cyphers Incubators at \$18 each. They are guaranteed to be in good working order—in fact, some of them were only bought of the Cyphers Incubator Co. late last season, and are less than a year old.

RE—MODEL—ED

Some of these No. 3—360 egg size Cyphers Incubators, manufactured and sold by the Cyphers Incubator Co., I have had shipped to my factory and fitted with my split-bottom diaphragms and my new patent thermostat, and refinished. These machines I will sell at \$24 each; and inasmuch as they contain my new thermostat, I will guarantee them to regulate more accurately, with less attention, and give larger average hatches than the 1905 Cyphers Incubator, as made by the Cyphers Incubator Co. under its new management, or any other make of incubator on the market, with the exception of the Model.

This, or your money back. Here is a genuine chance to purchase a good incubator that is really cheap.

For Sale by

CHAS. A. CYPHERS

Manufacturer of MODEL Incubators and Brooders

301 HENRY STREET, BUFFALO, N. Y.

Both are quite necessary in a well constituted breeding yard, where mating for best results is practiced, and conducive to what breeding stock must have to begin with health.

Size is the next point of importance we have to deal with, and as we have already given our views in this matter we shall not go into details. Now a bird may be healthy, and of a good strong constitution, and yet be lacking in this respect to such an extent as to be useless as a breeder. Size is a near relative to shape, and without the former, the latter is not an easy matter to obtain.

The same holds true, if we go to the other extreme, and produce a bird several pounds over the required standard weight, yet any breeder would in every instance prefer the later condition to the former.

Shape is one of the great essentials in a fowl, and however good she may be in other respects, if she fails here is greatly handicapped.

All breeders acknowledge that the male controls to a greater degree the shape and color; while constitution, size and productiveness is the special function of the dam. Yet I would hesitate to use a male bird in the breeding pen deficient in size, taking for granted that the female if of good size would make up for the deficiency. It is true that she will do this to a certain extent in the first generation, but in the second generation, we will find that we made an unfortunate choice when we selected an undersized male to head our breeding yard.

We want both male and females to be of standard size, and fully mature. But be it understood, that a bird may be of standard size, yes even above it, and for all that not be sexually mature.

What we mean by a sexually mature bird, is a bird with all the sex characteristics fully developed. In the male the comb springs into prominence, and takes on an aspect that is never seen in an immature bird. This matter is not easy to describe, but the comb takes on a different hue, it fills out, and seems to quiver with life.

The spurs also becomes prominent, and so all the furnishings such as hackle, saddle feathers, sickles, in fact the whole bird seems to grow and fill out most tle while ago, he would have fought them wonderfully, he even seems to gain size right before you and the former chickenish appearance has disappeared.

He has all of a sudden become courteous, and generous to the females, a lit-without compunction to obtain for himself some morsel fit to eat, but watch him now, and hear him calling, his consorts, lifting in his bill the found morsel, dropping it, again calling, till he places it before them, and then stands by watching it disappear. The more strongly this generosity is developed the better the bird will be as a breeder.

I dislike to use a bird for a breeder that is not chivalrous, as it is our experience that he makes a poor stock getter.

It is the only creature that we know of, in which this tendency is found and when lacking, you will find that we have a henny male not fit to breed from. It may be that nature has provided this means of reducing the males flesh so as to put him into a fit breeding condition, but be that as it may it is a sure sign of full maturity as far as sexual capacity is concerned.

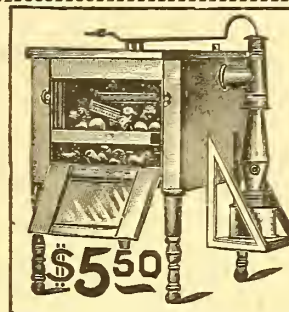

her first egg, she will have no intercourse with the male bird, and she will simply be abused and possibly unfitted for future use.

It is good practice never to put the male in the breeding yard, till the females are in full lay.

If these regulations of a well ordered breeding yard were adhered to, we would have little difficulty in maturing strong healthy stock, in place of a steadily increasing breed degeneration, largely due to a demand for fertile eggs early in the season, and to produce this demand young

immature stock is used, with the consequent bad results.

Another drawback to successful breeding, is the craze for showing, no moderation is known, and the comfort of the birds is of no consequence whatsoever. Birds that have been exhibited immoderately are not fit for breeding, as there is a limit even to the endurance of poultry. We have known in several instances birds carried from show to show for a whole winter, and we have seen show records that would make any man with common sense hesitate to buy eggs

MILLS' "EARLY BIRD" INCUBATOR \$5.50

Here is the Incubator everybody wants. It is the most wonderful setting hen on earth; always ready to hatch your eggs, and will do it every time if they are fertile. It is built of good material throughout, double walls, self regulating and handsomely finished; nothing to get out of order; will last for years and must not be compared with anything on the market.

It is a perfect hatcher of 55 egg capacity—just the thing for private families wherefrom a few dozen to several hundred chicks are to be hatched during the season; so simple anyone can operate it and after you try one you will have no other, and your neighbors will want them.

This "early bird" is the result of our experience in raising poultry on our large poultry farm and we guarantee every machine to give satisfaction, and in order to place one in every town in the United States at once we make the price \$5.50, and can ship machine at once on receipt of order.

Our new Catalogue of Thoroughbred Poultry, Poultry Supplies and Incubators will be mailed free to all who apply for it.

HUMPHREY.

White St. Factory, Joliet, Ill.

Ask about the Humphrey Rapid Clover Cutter for poultry; makes the finest poultry feed. No long pieces.

In the female breeder, where no fore-ign have been indulged in for eggs the signs of maturity is just as visible as in the male. She becomes less awkward in her movements, fills out, or we may call it shapes herself. Here too, the comb is an indicator, as in the male it reddens and fills out, and the bird is what we call in "the pink of condition" just before laying her first egg. A female should never be put to a male till she is in that condition, for if immature, and perhaps a month or more removed from from a pen of birds whose sire has a record of not less than a dozen shows in a single season.

This is why so many of our foremost breeders do not show at more than one of our largest shows in a season, being to much of a strain on birds that are to be used as breeders.

Then the risk of showing is also great, as it is generally the best of our flock, and worth in some instances hundred of dollars, no breeder can well afford to run chances of this kind, where not only pecuniary loss may be sustained, but our most valuable bird possible made useless for the seasons work as a breeder.

We are one of the many who are firmly convinced that one, or two at the most, of our large shows is enough to exhibit our birds in for one season. More so as our large shows comes in the month of January, when our pens are made up, and when climatic risks are of course much greater than in the fall months of the year.

A REMEDY FOR COLDS.

EDITOR AMERICAN POULTRY JOURNAL.

Dear Sir: Please publish this simple remedy for colds in fowls. Sometimes a bird will take cold when it is impossible to get medicine, and this is always on hand and acts almost like magic on my birds. Birds will take cold in the best cared for flocks. Take a tablespoonful of lard, one teaspoonful of ginger and cayenne pepper, make into pills about the size of a small marble with flour, and at the first symptoms of a cold give one pill three times a day, if there is no break up to the cold, repeat the dose. Separate the birds, if convenient, from the others. Have never had a bird in my flock that this did not cure.

SUBSCRIBER.

SHIPPING VALUABLE BIRDS.

We have observed that many breeders do not give the attention they should to forwarding valuable birds in the best way. Manufactured solid wood crates are best to ship in. They display a good appearance, are light yet strong and durable, and give you the benefit of a low express rate.

No express company charges more than 1½ merchandise rate between any two points on such crates, and where the merchandise rate to destination is \$2 or over per hundred pounds, single or one rate is charged.

Male birds should be shipped in crates 20 to 24 inches high, thus preventing the tail from being damaged. For distant shipments ample feed cups and utensils should be provided, making it convenient for expressmen to properly care for the birds.

Some breeders, not true painstaking fanciers, will throw their birds into a heavy goods box, attach a tag and send them out. As a result the customer gains the impression that such a breed-

er is in the business for pecuniary gain only, and is likely to place his orders elsewhere in the future.

If proper care is observed in forwarding stock or eggs they will arrive in perfect condition, even though they may be destined for a point thousands of miles away.

Such methods have a lasting impression on the customer and as a result you are very likely to merit his future patronage.

SELECTION FOR STRENGTH AND VIGOR.

The importance of strength and vigor in the breeding fowls is perhaps quite often overlooked or at least given less consideration than it should receive. It is a great temptation for the poultry keeper to retain for breeding purposes a specimen which in some respects very closely approaches his ideal of the variety he may be breeding, although he recognizes at the time that the bird is seriously lacking in constitution. A bird of that kind is not very apt to stamp his good points onto his offspring, but is pretty certain to breed disappointment for the poultry keeper who attempts to raise the chicks that come from the pen he heads. The prepotent male or female is usually the strong, rugged, vigorous, active birds which impress one at first sight that they have force and constitution back of them. There will never be too much attention paid to the selection for strength and vigor. It is the foundation of successful breeding. Without it our best varieties of thoroughbreds would soon degenerate into mongrels of the poorest kind. Radical outcrossing of entirely unrelated blood is not essential to obtain it, but proper selection and mating will improve a strain in strength and vigor just as well as in egg production, shape, size or color. Strong, vigorous birds invariably make the best and most prepotent breeders. Strength and vigor are the very first requisites in a flock if best results are sought. There is no time when the old fowls show plainer their ability to withstand adverse conditions than when going through the moult. A bird that has hard work to keep up its strength and vigor at this time, should not be used as a breeder under any circumstances. Select for the next season's breeders the cocks and hens which show the least bad effects from the moulting and you will hatch chickens which are born to live and thrive in spite of any ordinary adverse conditions which may chance to overtake them.

In selecting the future breeders from

among the young stock too much attention should not be paid to early development. Early maturity is not necessarily the accompaniment of the highest type of strength and vigor. The birds which manifest the disposition to steady growth and continue to keep in good condition although they may be somewhat backward in sexual development, will usually prove of equally vigorous and strong constitutions and be much more satisfactory all around as breeders. As a rule the first cockerel to crow is the first one to stop growing and the same may be said of the early laying pullet. Sexual development interferes with the best growth of the specimen when it takes place too early, and among the larger breeds the earliest maturing birds are rarely typical representatives of the breed.

In some cases real early maturity could almost be said to be antagonistic to the strength and vigor of the flock, for if the pullets come to laying too early in the fall, they are pretty sure to stop laying and go into moult as soon as settled cold weather starts in. The unnatural drain of this unseasonable moulting on their constitutions is pretty sure to be noticed and though they may come through apparently in good condition the evil effects will be apparent in the next season's hatching and in the young stock raised from their eggs.

The best results are usually obtained from the two year old hens, and pullets should not be allowed to take their place in the breeding pens, when they can be had. The practice of replacing the hens with pullets every year for breeders is pretty sure to result in weakened constitutions and under-sized stock. The best hens should not be discarded as breeders until their usefulness is past if one is aiming for steady improvement in quality. Hens usually lay larger eggs than pullets and the eggs are generally more strongly fertilized, hatch fully as well or better and chicks come larger, stronger and more determined to live and thrive. It is usually the case that the hens' chicks develop into larger birds

than those hatched from pullets, although I think the chief difference and the one most easily recognized is the more rugged and hardy constitutions of the hens' chicks. They seem to stand more adverse conditions than those from the pullets' eggs. There is no way in which breeders can popularize the thoroughbred fowl more than by careful selection for the hardest, strongest and most vigorous specimens.

VICTOR D. CANEDAY.

Taylor's Falls, Minn.

WALNUTS WILL MAKE HENS LAY.

During the dry fall just passed hens did but little at laying eggs. I found that feeding walnuts to my hens produced better results than anything I ever fed them before. They have been laying 22 to 30 eggs a day for nearly two months past, which is not bad for a flock of 36 hens at this time of year. I am confident the walnuts I feed them cause this result. They not only eat the kernel greedily but eat freely the hard part of the shell, which is an excellent grit. I gathered and dried the walnuts in the shell—did not shell them. They cost me nothing. My breed of fowls are single comb Brown Leghorns.

J. R. HUDSON.

Hardin Springs, Ky.

PREMATURE MOULT.

Many poultrymen complain to me this winter of their birds moulting second time this year. Warm, late fall may have quite a little do to with it. Sudden changes from warm to cold weather is apt to in many cases cause breeders to feed heavier. In a way this is forcing them. As we have many changes in this part of the country from cold to mild weather, young as well as old birds have moulted second time. Be careful about extremes in feeding at these times or birds will not breed well.

We Have Discovered The Secret

Sunflower Seed Will Make Hens Lay In Winter

It has been our good fortune to discover the secret. Nature, in her infinite wisdom, provided a plant, the seed of which will increase egg production and will assist poultry through the molting period. This plant is none other than the old-fashioned Sunflower that occupied such a cherished spot in our grandmother's garden. It is easily grown and will yield a good crop anywhere. The

American Giant Sunflower

which we have grown for years and have perfected to a high degree, with proper cultivation produces mammoth heads measuring from 2½ to 4 feet in circumference, weighing from 5 to 10 pounds each, and grows 3,300 strong, healthy plants to the acre.

Sunflower Seed is a natural feed for fowls—takes the place of "dope" mixtures. When properly fed brings birds through the molting season in one-half the usual time, with better plumage and better health than by feeding linseed meal, cottonseed meal, or any of the numerous "doctored" preparations offered for this purpose. It is nature's provision, works in nature's way, and produces natural results.

Last year we supplied seed to poultry raisers in every state in the Union and many in Canada. Results were so satisfactory the indications now are that we will have to hustle to fill orders for next season. However, we had a splendid crop and delight in hustling, so send in your orders early and be ready to plant an acre or more. Give it a thorough test, it will greatly increase your poultry profits.

**We Send Enough to Plant an Acre, Express
Paid, For 50 Cents**

and send directions how to plant, grow and harvest, with each order. No order filled for less than 50 cents. Address all orders to

HINTS TO BEGINNERS.

A Few Timely Remarks for the Benefit of Those Who are About to Start Raising Fowls.

After you have made up your mind to keep poultry, make up your mind again to keep just one kind, and get the very best you can afford. There are a number of breeds in this country that are suitable for any branch of the poultry business, decide on the kind that best suits your fancy and that is best adapted to the branch of the business that you intend to follow. If eggs are the principal object the White Leghorns or Black Minorcas are good fowls to look to. For broilers the White Wyandottes, White Plymouth Rocks or Rhode Island Reds are good ones to choose. For roasters, the Light Brahmans, Buff and White Cochins or Langshans will fill the bill, most any breed well taken care of will bring in good returns. It is not so much the hens as the man behind the hens. Many young persons fail because they are not enough in earnest at the start, they make a great show of trying, and are merely "firing blank cartridges at the target of success." By and by when they come to look at the target they find it untouched. This is part of the secret of the failure of ninety-nine of the hundred persons who start in the poultry business. It is the secret of many failures also in mercantile, professional and industrial life as well. See that you have a bullet as well as powder in your gun if you are going to shoot at a mark, and if you are going to start in the poultry business don't lose for lack of earnestness or a strong, sincere purpose. "Tis work that counts—not idle dreams." The value of an object lesson is not confined to children alone. The poultry keeper who visits a well arranged poultry plant or show, should receive many object lessons that will be a benefit

to him in his own yards. When he is in the neighborhood of a fine poultry farm or upon hearing of a person who makes a specialty of fine fowl, he should take the opportunity of looking the stock over and learning all he can from the truest of teachers—the man of practical experience. There are not many soft snaps in the poultry business, if a man is bound to win. The time to think is before you start, then keep right on thinking and push hard.

The man who never stops to think,

Through haste is oft bereft.

The man who stops to think too long

Stands 'round till he gets left.

Go at the term "good luck"—pick it all to pieces, after that you'll call it "good management." Remember that little leaks sink great ships. We sometimes hear young men who have tried to "keep hens" say, "Oh, there's no money in poultry—hens don't lay enough to pay for the feed, sick half the time and it's too much like work." Poultry keeping has no use for a lazy man, it is the man that throws off his coat and goes to work—the determined kind—that succeeds. The successful man loves his work—it is a pleasure to him; not an irksome task—he rises in the morning with the sun and goes about his work as happy as a king. His birds know him, for he is always kind to them; he raises a lot of chicks and feeds them well and whatsoever is best for his pets he does for them without a grumble, and goes around singing:

It's do the chores in the morning, and and keep to work till night.

The roosters gave me warning before a peep of light

To get their feed and rustle; bring enough for every one.

All poultry folks must hustle till the day is almost done.

Many an evening when his work is done he sits down in his cozy home and reads the AMERICAN POULTRY JOURNAL and other poultry journals. Thus he stores his mind with useful knowledge which,

when carried into practice, brings him in many extra dollars.

Dollars, dollars—yes young man—get as many as you can, Hustle up and do your best, and your hens will do the rest.

Do not build expensive houses for they are unnecessary, the most important thing is to have them warm in winter and cool in summer, light and airy; a floor of earth is the best; the house, roosts and nest boxes so built as to be easily cleaned. Small houses are the best for most people, as small flocks give the best returns, because each fowl gets better attention as a rule. Some think that fowl do better on free range, but just as many succeed when their poultry are confined in yards of generous size. If the yards are large enough to keep green stuff growing a greater part of the time, and the fowl are supplied with plenty of grit, charcoal, etc., they will have no desire for free range, and your eggs will be fully as fertile. Spade up the runs once or twice a year and sow rye or something of the kind. Have plenty of shade, sunflowers or young fruit trees are good, be regular in feeding, watering and caring for your stock, the man that one day overfeeds and the next day underfeeds his birds, reminds me of the Irishman who, by alternately stuffing and starving his pig, thought he would produce a streak of lean and a streak of fat through his bacon. Keep the drinking vessels out of the sun during hot weather and keep them well filled, for fowl drink lots of water. Have the water cool in summer and warm in winter.

Remember when the winds are chill—The winds of bleak December—For hungry birds a dish to fill And water that they can not spill.

Don't let the young and old stock run in the same flock; yard them as near as possible, all of the same age. Keep the birds busy by throwing the whole grain into litter of some kind—they will work a long time over a handful of millet seed. Whitewash everything twice a year; it

FISHEL'S WHITE P. ROCKS

I am sure need no introduction to you. If you want the best obtainable (at the price of stock with no breeding behind them) let me figure with you, please. Our record of

Pure Bred White Wyandottes

I have carefully selected four pens of my very best White Wyandotte hens and pullets, of good size, shape and excellent laying qualities, mated with fine young cockerels of superb carriage, beautiful, snow-white plumage and fine Wyandotte points. These birds are healthy, vigorous young stock and will produce first-class chicks. I offer eggs from these choice matings at \$1 per sitting of 15. Satisfaction guaranteed.

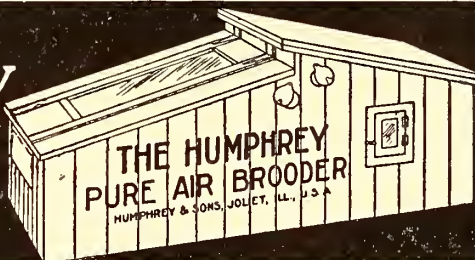

MRS. T. F. LEONARD,

Box 94, Mt. Sterling, Ohio.

Don't Let Your Chicks Die!

You can double your poultry profits by raising all the chicks you hatch instead of murdering 75% of them in a death-trap brooder. This means dollars to you. Investigate the newest, most original, scientifically correct brooder ever built—

THE HUMPHREY PURE AIR BROODER

Top heat; perfect regulation of temperature; double circulation of heat and pure air; perfect ventilation; no trampling; easily kept clean; perfectly sanitary; most convenient; most economical in oil, and guaranteed to raise more chicks than any other brooder ever made. We especially urge all poultrymen who have suffered loss and disappointment from poor brooders to investigate. Already used by hundreds of leading poultrymen. Don't waste your time and kill your chicks with old-fashioned brooders—get the latest and best. You owe it to your own best interest to investigate.

World's Fair Winners—Raised in the Humphrey.

HUMPHREY & SONS, Joliet, Ill.

North Adams, Mich., Dec. 5, 1904.

Gentlemen:—We are glad to inform you that all the young Orpington stock we exhibited at the World's Fair were raised in the Humphrey Pure Air Brooder. We were very successful at this show where we won first, third and fifth cock, second and sixth cockerel, second, third and fifth hen, first, fourth and sixth pullet and first and third pen in the Single Comb variety, and first cock, first cockerel, second hen, third pullet and first pen in the Rose Combs. We competed against 8 of the foremost breeders, including Wm. Cook & Sons of Eng. We raised about six hundred last season and the most of them in your brooders. We liked them so well that we bought six more of you this year. They are as easy to run as an incubator. You can set them at any degree of heat, 70, 75, 80 or 90, and they will run right there like a clock and without much more trouble.

Truly yours,

KNOWLES, YOUNG & CO.

HUMPHREY, WHITE STREET FACTORY, JOLIET, ILLINOIS.

The Great Question

for the next few months will be, "What Incubator shall I buy?" If we could talk with you face to face and explain the many advantages of the

Perfected Von Culin

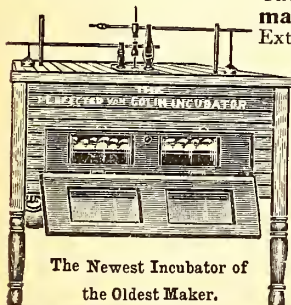

the question would be answered most satisfactorily to us both. This machine is the result of practical experiments and tests extending over a period of 30 years. The inventor Mr. C. Von Culin is widely known as a pioneer in incubation. He built his first machine in 1873 and has been continuously in the manufacture of incubators and brooders ever since 1885.

The result is the **most perfect and simplest machine** on the market. Kiln-dried Lumber, Extra Thick and Packed Double Walls, Full Sized Heaters, Metal Safety Lamp, Improved Thermostat absolutely controls heat, Tested Thermometers, and a first class Egg Tester. It takes only about $\frac{1}{2}$ as much oil to run this machine and your hatches will run about 20 per cent higher. A big saving every year. You won't quarrel with the price.

Our "Boiled Down" Catalogue tells you what you want to know, simply and in the fewest possible words. It is a time saver. We send it free. Write today.

The Newest Incubator of the Oldest Maker.

brightens up your plant and helps keep down vermin. Get your chickens out early. If of the larger breeds, March and April are good months. For the smaller class, April, May and June.

For good results in fertile eggs ten hens may be mated with a cock, but I get more strong chickens from six or eight females and one male—my birds are Light Brahmas. By feeding green cut bone three times a week, either alone or in the morning mash, green stuff at noon and whole grain at night—a goodly number of eggs should be produced during the winter months. If a hen lays only one egg a week it will pay for her food, and every egg she lays over that is profit, so it pays to feed for eggs. In setting hens let the nests be on the ground in a cool place in warm weather, but in cold weather make them as snug and warm as possible. Small or medium-sized hens make the best setters for they will not break the eggs or kill the chicks so easily as large hens. Have the nests for setters so they can walk in upon them. Do not try to hurry a setting hen; if she don't want to set she won't. Remove a hen, that you want to set in a new location, at night, try her on a few artificial eggs first to see if she means business. Give her plenty of water, grit and whole grain, also dust her and the nest with lice powder and keep your hands off for twenty-one days. The hen knows her business, if she don't you can't teach her. In setting give eleven eggs to a hen till the middle of April and thirteen or fifteen after. Do not feed the chickens until they are twenty-four or forty eight hours old; they come into the world with a full crop. The first food I give the youngsters is stale bread crumbs, moistened with sweet milk. I give them water from the start. During the first two weeks I feed them every three hours, a little at a time, bread crumbs mixed with corn meal. Millet seed and pin-head oat meal after they are two weeks old. I give whole wheat or cracked corn at night, a soft feed in the morning and a little cooked meat and vegetables at noon. Never feed any sloppy food either to hens or chicks. A clean fast is better than a dirty breakfast. Always have a clean place to feed. Keep your chickens busy and when night comes they will be in a condition to enjoy a quiet night's rest. Give them plenty of room to sleep in and you will find them in the morning all ready for another day's sport.

C. W. BIXBY.

EGG LAYERS AND PRIZE WINNERS.

It is sometimes said that fowls bred for fancy points must be bred so, regardless of egg production. I know of a case where I exhibited pullets and won first and second, and everybody said at the time that the second was of the egg laying type and first was a show bird. But from my egg record I find my first prize pullet the best layer I ever owned. Respectfully,

Jos. A. BURKHART.
Smithsburg, Md.

George F. Hoffman, Cuba, Wis., won as follows on his Rose Comb Brown Leghorns at Warren, Ill., December 12-17, 1904: 2d, 3d, 4th and 5th cockerels. 1st, 2d, 3d, 4th and 5th pullets 1st pen.

Winchester Poultry Yards, Winchester, Ky., won as follows on S. C. Black Minorcas at the Birmingham, Ala., show, December 6-9, 1904: 1st cock, 1st hen, 1st cockerel. A 93-point pullet didn't get a place.

Shows, Associations and Clubs

Secretaries are requested to send us the latest news and announcements for this department.

MEETING OF THE AMERICAN ORPINGTON CLUB.

The American Orpington Club held its annual meeting at Madison Square Garden, New York, Thursday, January 5, 1905 at 4 p. m. Dr. Paul Kyle president, in the chair.

Minutes of the last annual meeting were read and approved. Reports were made by the president and secretary-treasurer.

The president congratulated the club on the steady progress made by the Orpingtons, as shown by the increased number of entries this year, 257, against 176 last year, the total number of Orpington birds in the show being 369. The president recommended that the club do more in the future in the way of increased prizes.

The secretary-treasurer reported an increase of membership for the year of fifty-eight, making the total membership 184.

During the year the club has joined the American Poultry Association, has held informal meetings at St. Louis and at Herald Square, New York.

The executive committee continues the club policy of giving special club ribbons at every show in the country to members who were first in any class of Orpingtons where there are two or more competitors. They also gave cups at Herald Square and Madison Square, New York, at Boston and Chicago.

The treasury of the club was reported in very satisfactory condition, all expenses paid and \$75 on hand for next year.

A tribute was paid to the memory of Mr. William Cook, member of the club and originator of the Orpington breed, and resolutions of sympathy ordered engrossed and presented to his family.

The secretary was authorized to solicit subscriptions for a \$100 club chal-

lenge cup to be won by members three times at Madison Square Garden before final possession obtained, but each year's winning to be rewarded by a club silver medal in full ownership by the winner.

The conditions are that the best male or female rose or single comb in any class of any variety of Orpingtons owned and exhibited by a member of the club shall be entitled to the prizes.

Mr. Richard Oke, one of the club judges, judged the show to entire satisfaction.

Messrs. Frank W. Gaylor, West Farms, N. Y.; Mr. Richard Oke, London, Ont., and Mr. Percy A. Cook, Scotch Plains, N. J., were appointed club judges for 1905.

Mr. Wallace P. Willett declined reelection to office.

The following officers were elected: President, Dr. Paul Kyle, Flushing, N. Y.; vice president, Mr. Frank W. Gaylor, Gedney Farms, White Plains, N. Y.; secretary-treasurer, Mr. Chas. Edward Faber, Plainfield, N. J.; executive committee, the above officers and Mr. Chas. E. Vass, Washington, N. J., and Mr. Percy A. Cook, Scotch Plains, N. J.

After the pleasant interchange of compliments over the extraordinary display this year of Orpingtons in quantity, quality and money value, and with the brightest outlook possible for the breed, the club adjourned.

WALLACE P. WILLETT, Sec'y.

ANNUAL MEETING OF THE AMERICAN LEGHORN CLUB.

The eleventh annual meeting of the American Leghorn Club was held at Madison Square Garden, New York, January 4, 1904, at 4 p. m. The meeting was the largest and most enthusiastic held in years. Thirty members were present. Several important matters were very warmly contested.

Resolved, That a life membership be made at \$10.

E. G. Wyckoff was elected as delegate to American Poultry Association for 1905.

Eighteen new members were elected to membership.

Election of officers as follows:

W. F. Brace, Victor, New York, president; vice presidents, A. D. Arnold, E. G. Wyckoff, E. B. Cridler and W. T. Lidel; W. W. Babcock, secretary and treasurer, Bath, N. Y. Executive Committee, Geo. H. Burgott, W. H. Webkie, F. O. Groesbeck, Clyde Patterson, W. T. Wittman, E. D. Pierson, M. K. Cornwall, W. E. Bright and E. A. Weimer.

Mr. Crawford offered to club cash \$50 for every \$300 raised by the club as cash specials, to be offered at the 1906 New York Show. Subscriptions were started and \$115 in cash was donated by members present.

W. W. BABCOCK,
Secretary and Treasurer.

Bath, New York.

THE SILVER WYANDOTTE CLUB CATALOGUE.

The Silver Wyandotte Club of America will issue a catalogue in the near future that will be a work of art and the finest ever gotten out by any specialty club. If you are a breeder of Silvers write the secretary, A. C. LeDuc, Chenoa, Ill., regarding advertising rates, etc., and he will tell you all about it. Special rates to new members.

A. C. LEDUC.

LAKE GENEVA, ILL.

The second annual exhibition of the Lake Geneva Poultry Association was a success in every particular, demonstrating the fact that to make a success of anything united action and unremitting work is essential.

From a small beginning a little more than a year ago, the association has grown in strength and importance until it stands today, after the second annual show, as a gratifying example of what push and energy will do.

The revised entry list shows about 600 entries, including all of the more important breeds and many of the rarer breeds of poultry, also dogs, cats, goats, canaries, parrots and specimens of the

A FREE FOR ALL HATCH

JEWEL INCUBATORS and BROODERS are sold on **thirty days' free trial**—a guarantee backed up by a capital of \$2,000,000. We will prove to anyone

that our machines are more accurate and sure than any others known. Perfect regulation, automatically controlled. Our Supply Catalogue gives full particulars concerning our unequalled offer and tells how to raise poultry at the least expense. A large three color picture of a White Plymouth Rock cock, that sold for \$500.00, will be sent those interested. We are the largest poultry supply dealers in the world.

JEWEL CHICK FEED is prepared and manufactured by us. It is guaranteed to raise more chicks to maturity than any other grain feed known. It is a perfectly balanced ration. Money refunded if it fails. No dirt and mill sweepings found in this mixture. Only pure, sound and wholesome grains used in the Jewel Feed. No up-to-date farmer or poultryman can afford to be without our catalogue. It's Free.

Address: POULTRY DEPARTMENT, Box E, INTERNATIONAL STOCK FOOD CO., MINNEAPOLIS, MINN.

ornamental class. A particularly agreeable feature of the show was the absence of any dissatisfaction on the part of exhibitors. This was due mostly to two things. The excellent arrangement of the coops and varieties in the rooms by Superintendent Mr. Small and also the work of the judge. He proved to the exhibitors that he thoroughly understands his business and that any bird that passed through his hands with a good score is fully entitled to it.

DAVENPORT, NEB.

The second annual exhibition of the Big 4 Poultry and Pet Stock Association was held during last week of December, and was a decided success in every way. There were 300 birds on exhibit, and of a superior quality. Judge J. J. Atherton, of Emporia, Kans., who did the scoring at the first annual show, was here again this year, and his work was entirely satisfactory to the exhibitors and not only that, he made a friend of each and every one he met. Any questions the exhibitors wish to ask, he is always ready and willing to give the necessary information, and his explanations are plain, so that anybody can easily understand. His work has been so satisfactory that the association voted to secure his services for the third annual show.

HAMILTON, OHIO.

The Southern Ohio Poultry Association held its sixth annual show at Hamilton, O., Dec. 7 to 11, last. It was a very successful exhibition, and all exhibitors expressed themselves as highly pleased with the treatment accorded them. The quality of the stock exhibited was exceptionally good. A. B. Shaner, who placed the awards on the poultry, said that he handled some of the best White and Buff Leghorns and Black Minorcas he had ever seen.

LOCKPORT, N. Y.

The annual show of the Niagara County Poultry and Pet Stock Association was the largest and in every way the best show of the kind ever seen in this end of New York state outside of Rochester. The association and its capable officers are deserving of praise for their successful efforts to give Lockportians an exhibition of poultry such as is seldom given a person to inspect.

ADAMS, MASS.

The Adams Poultry Association held a very successful show during the first week in January. They had a large entry list and the attendance was very large.

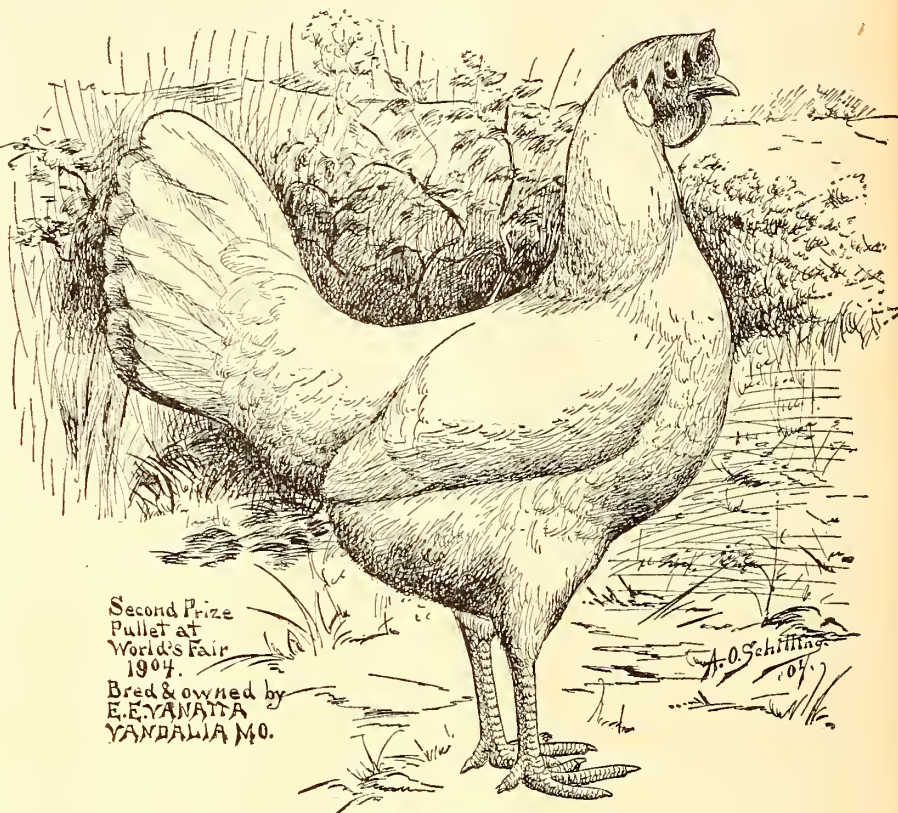

PRINCETON, IND.

The poultry show held at Princeton,

Upper Iowa Poultry Association was held at Mason City, Iowa, January 3-7, 1905. The entry list was large and the birds of good quality, and the show was a grand success, both financially and socially.

WINNEBAGO CITY, MINN.

The dates of the first annual exhibition of the Blue Earth Valley Poultry

SINGLE COMB WHITE LEGHOEN.

Bred and owned by E. E. Vanatta, Vandalia, Mo.

Ind., by the Wabash Valley Poultry, Pigeon and Pet Stock Association of Indiana during the week of December 26-31, 1904, was a financial success and pronounced by all visitors to be a hummer, there being over 500 fine birds on exhibition, representing all classes.

MASON CITY, IOWA.

The ninth annual exhibition of the

Association have been changed from February 14-17, 1905, to February 19-23, 1905. C. W. Raddue, secretary, Winnebago City, Minn.

MOBERLY, MO.

The thirteenth annual exhibition of the Missouri State Poultry Association was held in Moberly January 3 to 6, 1905, and proved one of the most suc-

Bronze Turkeys

Have you bought that breeding Tom or those hens you need to infuse new blood in your flocks? You want the best obtainable, so why delay the matter? At

MADISON SQUARE GARDEN, NEW YORK

January 3 to 7, 1905, I exhibited eighteen turkeys, winning eighteen prizes, viz.: Two firsts, five seconds, six thirds, and five fourths. At

three first prizes, two seconds, one third, two fourths, two fifths, two sixths, two sevenths, and Silver Cup for best display. What better proof do you want as to quality of my turkeys? I have 200

CHOICE BREEDERS yet to SELL.

EGGS FOR HATCHING \$5 PER 11

I have mated up twelve different flocks, each one headed by a prize winning Tom, six World's Fair winners and six New York winners, all hens being of the very best, among which is over 30 prize winners. Am booking orders now, which will be filled in rotation.

MRS. U. R. FISHEL

Box A, Hope, Indiana

cessful in the history of the organization. Nearly 1,000 birds were on exhibition and Judges Russell and Heimlich pronounced the quality the finest they ever handled.

PALMYRA, MO.

The Northern Missouri Poultry Association's first show was a decided success, both financially and socially. The birds exhibited were fine specimens of their kind, and the exhibitors and visitors were well pleased with the treatment they received.

JOHNSTOWN, N. Y.

The Fulton Co. Poultry and Pet Stock Club held a meeting at Johnstown January 9, 1905, at which officers were elected for the ensuing year, and it was decided to hold a show either at Johnstown or Gloversville in November, 1905. Jacob Blunk, secretary, Johnstown, N. Y.

ANTWERP, OHIO.

The fanciers of Antwerp and vicinity have organized the Antwerp Poultry and Pet Stock Association, and will hold an exhibit in the near future.

C. A. BISSELL, Sec.

AMERICAN LEGHORN CLUB SPECIALS.

American Leghorn cups for New York were awarded as follows: Single Comb White, Orchard Hill Farm; Rose Comb White, W. W. Babcock, Bath, N. Y.;

Single Comb Brown E. B. Cridler, Dansville, N. Y.; Rose Comb Brown, W. W. Kulp, Pottstown, Pa.; Single Comb Buff W. F. Brace, Victor.

LANSING, MICH.

The Central Michigan Poultry and Pet Stock Association, held Dec. 27-30, 1904, was a decided success in every way, and the association has decided to hold another show in 1905.

LAWRENCE, KAN.

The Douglas County Poultry Show, which was held Dec. 5 to 10, 1904, at Lawrence, Kans., was a success, both in number of birds shown and financially. The members of the association have determined to make an effort to hold a larger and better show next year. There will be two silver cups offered, one for the best pen of solid colored birds and one for the best pen of parti-colored birds. The show next year will be held Dec. 12 to 16.

NOTICE.

The annual Rose Comb Brown Leghorn Club Catalogue is now ready, and anyone can get membership blanks and catalogues by writing Fred Alger, secretary of R. C. B. L. Club, Waukau, Wis.

CRESCO, IOWA.

The first annual show of the Howard County Poultry Association, which took place Dec. 21-23, 1904, was a big suc-

cess in every way except in attendance, and it is to be regretted that a larger number of farmers and townspeople did not attend. Mr. Holden, their judge, says that not one show in twenty have the display at their first show that was on exhibition here. All premiums have been paid in full and a neat little sum remains in the treasury to encourage the management to further efforts.

STANBERRY, MO.

The fifth annual exhibition of the Grand River Valley Poultry Association, held Dec. 9-14, 1904, was a decided success. There were near 500 birds on exhibition. The Barred Rocks exceeded in numbers, about 150 of that variety being exhibited.

NEED OF FEEDERS.

One thing in this age of push that is needed is the economy of time. In order to do this a feeder is needed for young chicks. You will find this in my automatic poultry feeder, water fountain and young chick protector. One lady at world's fair, St. Louis, said she fed her chicks in a brush pile to protect them from old fowls.

E. H. TURNER.

Tipton, Ia.

To get fifteen hens to do as good laying as thirty hens would in the same flock is economy in the right direction. That is exactly what we did with a pen of Leghorns. It never pays to overcrowd, and small families will invariably do better than large ones.

PAYNE'S ALFALFA POULTRY FOODS

PROPERLY MIXED Make Eggs! More Eggs! Fertile Eggs!

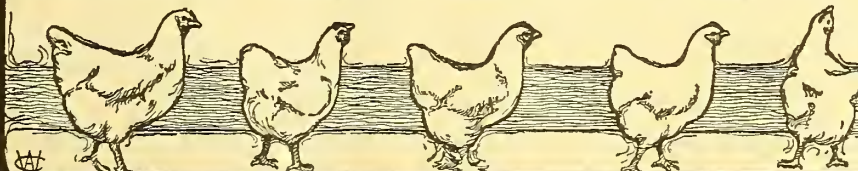

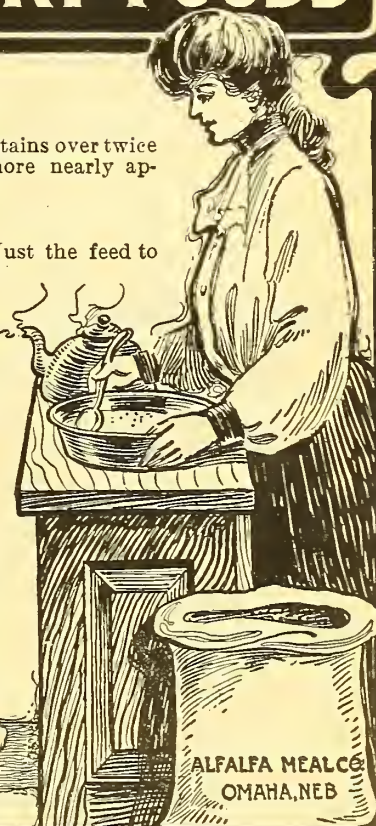

Payne's Alfalfa Meal is made from especially selected green kiln-dried alfalfa. It contains over twice as much protein, the egg-forming element—as clover meal; is much greener; more nearly approaches grass conditions, and is selling at the same price, thus a cheaper feed.

Payne's Alfalfa Meal

the greenest, the purest, the best. A high protein feed that makes hens lay. Just the feed to mix with grain, table scraps, or animal foods, such as green bone, meat meal, etc. If you do not have these feeds, buy

Payne's Alfalmo Poultry Feed

a practical combination of green alfalfa meal, meat scraps, bone, dried blood, and every food material that poultry want except grain. It is simply the green *High Protein Mixer*, which combines properly with the grain you raise or buy cheaper than we can furnish it to you. Alfalmo Poultry Feed is equally good for laying hens, chicks and fattening poultry and is cheap. We know from numerous testimonials sent to us by our customers that *Payne's Alfalfa Feeds* used as directed, give the *best satisfaction of any Poultry Feeds on the Market*. Prices, f. o. b. Omaha or Chicago, cash with order. 100 lbs. Payne's Alfalmo Poultry Feed \$2.50. 500 lbs. Payne's Alfalmo Poultry Feed \$10.00. 100 lbs. Payne's Green Alfalfa Meal \$2.00. Send for ton and carload rates and circulars concerning our feeds for dairy cattle, hogs, steers and horses. These feeds are the best in the world. Alfalfa Meal Company, 1632 Farnam St., Omaha, Neb.

FREE--Great Crops of

STRAWBERRIES

and How To Grow Them

The **BOOK** that is worth its weight in **Gold** because it tells how **Big Crops of Fancy Berries** can be grown every year and how to market them at a **Big Profit**. It contains the **Latest Discoveries in Plant Breeding** and has 110 beautiful engravings of berries and berry fields, showing **Actual Results** obtained by progressive growers. It tells how to combine berry growing with poultry and double your profits; there is **Big Money** in strawberries and chickens. The book tells how: It is brim full of **Common Sense** and actual experience. Don't order your plants until you **Read This Book**. It is **Free**. Send your address to the

R. M. KELLOGG CO., Box 325,
Three Rivers, Michigan.

50 EGG INCUBATOR \$5

Everything necessary to complete the process of incubation is included in above price and shipped with the machine—a complete incubator (except the oil). We guarantee the

CYCLE HATCHER

to hatch every strong fertile germ, when directions are followed, or we will refund the purchase price. We have worked for years to perfect this machine and so to simplify it that we could sell it for \$5 with a guarantee so broad that no one need hesitate to buy one. We have reached our goal. Send for our free catalog of the **Cycle Hatcher** before you buy, or send \$5 and we will ship machine subject to trial, money to be refunded if it don't substantiate every claim we make. **Cycle Hatcher, Co., Box 214, Salem, N.Y.**

**FERTILE EGGS.**

Don't fail to feed for fertile eggs via no mash, no forcing foods. Cats and corn is best, green food sure. If you want fertile eggs don't make your hens lay now. Old hens are best for good, strong chicks and don't inbreed. Fancy feathers and show stock are not what an egg farmer wants for fertile eggs and strong chicks.

J. M. SONTAG.

St. Charles, Ill.

Breeder of R. I. Reds.

GOOD PULLETS BUT BAD COCKERELS.

Why is it that in some flocks the female birds all excel the males by many points? Some say that it is inbreeding. But why not poor pullets as well as poor cockerels by inbreeding. The solution of this point might throw light on many other subjects.

W. G. BAKER.

Vanceburg, Ky.

STARTING RIGHT.

First, buy stock; not six or eight birds at \$1 apiece, but rather a pair or two, putting in all the money you can spare and buying upon a guarantee of birds as represented at the privilege to return same. Be sure also that the paper you see advertisement in is O. K. and will stand by you in case of non-satisfaction. Build nice warm, dry house and don't try and raise any more chickens than your room will warrant.

C. F. McLANE.

Belvidere, Ill.

A WORD ABOUT GEESE.

This is the time of year when geese should receive the very best care. Your geese should not be fat; if they are they will make very poor breeders. One of the best feeds is a mash composed of oats and buckwheat; into this should be put grit and oyster shells.

J. P. ALLYN.

Delavan, Wis.

HONESTY.

We have all heard that "Honesty is the best policy." Do unto others, etc. When you get an order be honest with your customer. Ship him a little better stock than he pays for. It will please him and pay you. A pleased customer is one of the best advertisements.

J. A. BARNUM.

Tekonsha, Mich.

Wilber Bros., Petros, Tenn., breeders of S. C. White Leghorns, won as follows at the big Atlanta, Ga., show: 3d cockerel, 1st and 3d pullet, 3d and 4th hen, 2d pen, and a large number of valuable special prizes.

A. & E. Tarbox, Yorkville, Ill., made the following winnings on their Silver Wyandottes at Chicago in December, 1904: 4th and 5th cocks, 1st and 3d hens, 4th cockerel, 1st, 3d and 4th pullet, 2d pen.

January 6, 1905.
This is to certify that I have today sold and shipped to Mr. J. P. Allyn, Delavan, Wis., the White Indian cockerel which won third prize at the World's Fair, St. Louis, leg band number "C3912" and shown in coop number "18365."

Questions and Answers

Questions asked by subscribers will be answered in this department.

EDITOR AMERICAN POULTRY JOURNAL:

Dear Sir: Will you kindly answer the following questions in your columns of "Questions and Answers?" I have recently been given two young pullets. I threw them both away because of the following: I found small particles between the skin and flesh about the size, color and shape of a mustard seed, otherwise they looked O. K. Is it safe to eat such. Please state what the trouble is, also cause and cure, if there is any, and oblige,
J T H.

Manchester, N. H.

We are unable to answer the above, but don't believe the fowls were suitable for table use.

EDITOR AMERICAN POULTRY JOURNAL:

Dear Sir: Will you please state in your next issue how to breed for cockrels and how to breed for pullets and how many females to a cock for good results.
G. W.

There is no known rule to follow in this matter. Ten females are enough for one male.

EDITOR AMERICAN POULTRY JOURNAL:

Dear Sir: I have a fine rose comb white Leghorn cockerel that has two spikes. Is it safe to use him?

I noticed several pullets which have two spikes also. Would they be all right to be bred to another cockerel which is very good and has only one spike? He is a half brother to those pullets.

Mabton, Wash.

N. E. L.

We do not advocate the use of any bird as a breeder that is not up to standard requirements. The results are always a disappointment to the breeder. Kill off the culls and breed only from birds that are free from defects and disqualifications.

EDITOR AMERICAN POULTRY JOURNAL:

Dear Sir: Please answer the following questions and oblige:

1. How often should cut clover be fed; and how is it prepared?

2. Would it be a good plan to breed two pullets and two one-year-old hens, of the same strain, with the same cock?

Williamsport, Pa.

C. B.

1. About three times a week. To prepare clover meal, put the meal in a kettle and pour boiling water over it; cover the kettle and let it stand for four or five hours. It is then ready to be mixed in the mash.

2. We believe this mating to be all right.

EDITOR AMERICAN POULTRY JOURNAL:

In the December issue of the Journal, page 817, sprinkling air-slacked lime on the dropping boards is recommended as an effective method for dealing with mites. Doesn't lime practically spoil hen manure for fertilizing purposes?

Vassar, Mich.

J. P.

We don't believe that air-slacked lime will injure the droppings for fertilizing purposes.

EDITOR AMERICAN POULTRY JOURNAL:

Dear Sir: Will you kindly state in February issue of A. P. J. how much yard space is necessary for 25 Rhode Island Reds.
Mrs. H. G. H.

Chester, Mass. L.

A yard 25x50 feet will do very nicely, but if you can give them more room, do so.

EDITOR AMERICAN POULTRY JOURNAL:

Dear Sir: Kindly let me know through the JOURNAL the reason my Minorcas and part of the Rock hens don't lay. Is sun-flower seed good to give chickens during molting season? They have not layed for four months. They are all feathered and nice and slick, combs red, no lice or anything that I know of to prevent their laying, except the letter on the floor will get damp. The house is sided and boarded, paper between; single floor, plenty of light. Is the house warm enough? I feed them oats and mash, very little corn, three times a day, about one quart per 12 chickens. Plenty of clean water, grit, steamed clover and let them run when the weather is dry. The chickens I speak of are all healthy, but I have some very sick ones with the roup. Some of them are so stiffened they can hardly walk. Do you think it desirable to let them run out at their will, to make them hardy? Kindly let me know where I am at fault.
Mrs. L. S.

Detroit, Mich.

One of the main reasons why your hens don't lay is that your house is not ventilated properly. The birds are suffering from rheumatism, brought on by the house being damp. Keep the windows open at all times, except when the weather is stormy. Thoroughly clean out all the damp litter and sprinkle air-slaked lime over the floor, after which put in plenty of fresh dry straw. Let the fowls run out except when the weather is stormy. Keep them busy at all times. Feed them a little green cut bone about three times a week, two ounces to each fowl.

EDITOR AMERICAN POULTRY JOURNAL:

Dear Sir—I would like to know how to judge a full-blooded White Plymouth Rock hen or cock.
J. M.

Greenville, Ohio.

American Standard of Perfection will teach you how to judge. Price, \$1.50. We are now booking orders for the revised edition, to be shipped as soon as published.

EDITOR AMERICAN POULTRY JOURNAL:

Dear Sir—Please answer the following question in the next number: If a fowl has an injury to the foot which causes it to enlarge to twice its normal size, would that disqualify it for competition in a poultry show?

Harvard, Ill.

L. W.

This would not disqualify the bird, but he would be cut severely, and we would

Sharples Tubular SEPARATORS

The Only Modern Separator Bowl

Why buy a separator filled with bottomless cake pans, punched and bent sections of stove pipe, or other complicated parts?

not advise exhibiting a bird in this condition.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—Please tell me how to tell a Toulouse goose from a gander.

Benjamin, Utah.

C. H. C.

The voice of the female is coarse and the male has a thicker neck and a generally masculine appearance.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—Will you please answer the following in your next copy: Is it necessary to have the new Standard? Are those breeds that are described in the old, described differently in the new? Are the illustrations colored?

Tentopolis, Ill.

J. S.

If you wish to breed exhibition birds, you must have the new Standard for a guide. A great many changes have been made in the descriptions of nearly all varieties. The illustrations are not colored.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—Would you please answer the following questions through the columns of your paper:

1. How much, or what amount of, ground feed is required for about 80 fowls, all hens and pullets, ground oats or corn meal?

2. About how much wheat and corn, whole?

3. Is ground oats and corn meal a good mash for hens in the morning, and wheat at noon and corn at night?

4. Should I weigh the food for each meal and deal it out to them at the same weight thereafter?

Wayland, Mich.

F. M.

1. About 14 lbs. of feed is sufficient for 80 fowls. This should be weighed before the feed is moistened.

2. Half a pint of dry feed, either wheat or corn, per fowl is considered about the right quantity.

3. Yes, but bran, shorts, wheat middlings, clover meal, meat meal, etc., may be added from time to time to give variety and stimulate the appetites of the fowls.

4. You must use judgment in feeding. If the fowls do not eat the feed up clean, feed them a little less the next time. It is better to underfeed just a little than to overfeed. Overfeeding causes disease and laziness, and a lazy hen will not lay. We cannot give you any exact formula to follow, as some fowls eat more than others.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—Will you please give, through your columns, symptoms of consumption of the lungs in chickens?

I have a rooster that has difficulty in breathing, breathing hard most of the time, with his bill partly open, sometimes opening it wide and gasping for breath.

I had a case of consumption of the lungs in a rooster this summer. When opened, one lung was entirely decayed.

The first rooster mentioned is in good condition, has red comb, but never crows that I have noticed; sometimes makes a loud gurgling noise.

Clearwater, Minn.

H. H. K.

The symptoms of consumption in fowls are varied, but the most common symptoms are rapid and progressive emaciation, made apparent by the loss of weight, wasting of the muscles, and

prominence of the bones. The comb becomes pale and the bird loses its bright, animated expression, and in the later stages becomes quite dull and sleepy. At this stage a persistent diarrhoea sets in, which increases in intensity until the subject dies from exhaustion. Birds showing the above symptoms should be killed at once and the carcass burned, as this disease is very contagious.

The rooster is probably suffering with bronchitis brought on by a cold which has settled in the bronchial tubes. If this disease is of long standing it cannot be cured. Relief may be obtained by holding the head of the bird over a steam vapor made by boiling water to which a handful of hops has been added.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—Will you kindly answer the following questions? 1. My chickens get what I call a cold; water runs out of their nostrils, and later the nostrils get closed up and they breathe through their mouths. Sometimes one eye closes up, but not often. I have been giving them kerosene oil and lard and separated them from the flock. They sometimes get better after a while, but I always find more to take their place. What would you advise? 2. I killed a 6 months old chicken recently and when I dressed it I found something like slime between the skin and flesh, it was troubled with running at the nostrils about a month before I killed it. Seemed to be healthy and all right when killed. Is such a bird fit to eat? What was the cause of slime being on chicken? 3. What is good to cure dysentery in chickens? 4. What is the best floor for a

RESULTS IN THE EGG BASKET

tell the value of the feed you are feeding your hens better than anything else. When eggs are selling at 20 to 40 cents a dozen it's like throwing money away to keep on feeding feed that doesn't make hens lay. That's false economy. Now is the time every hen you feed should be laying every day, and she will if you supply her with the feed that makes eggs. Don't blame the weather for cutting off your egg results. Naturally, it does prevent the hens from getting the egg-making materials nature supplies, but it does not make it impossible for you to supply these elements that make eggs. Simply feed your hens

LEE'S EGG MAKER

and they will not want for a single thing necessary for making eggs. They will begin laying in a short time if you do your part. Besides it will correct any other faults that are interfering with the egg-making organisms and rejuvenate the whole flock. Make them feel better—make them look better and give them every assistance for bodily maintenance as well as for egg production. As a mash it brings the cash quicker and surer than any food made. A test tells best—why not test it? Send for free book, "Mandy's Poultry School," and learn how she got eggs when eggs were high.

GEO. H. LEE CO., BOX 91,

OMAHA, NEBRASKA

poultry house? 5. I have a B. Leghorn rooster that fights the hens, will not let them eat until he gets what he wants. I have three hens in the pen with him. Will he be all right for a breeder?

Chicago, Ill

W. S. A.

1. Your fowls have a mild form of roup. This is probably due to bad ventilation or unclean quarters. Thoroughly clean and disinfect your houses with a 2 per cent solution of carbolic acid. Keep the nostrils of the affected birds open by injecting a little kerosene into them. Keep on using the kerosene oil and lard and keep the sick birds in a dry, warm place.

2. We do not believe the fowl was fit to eat. The birds were not in good health or this slime would not have been there.

3. Remove the cause and the disease will soon disappear. Lack of grit and improper feeding will cause this. Keep grit and charcoal before your fowls at all times.

4. If the soil in your vicinity is dry an earth floor is best; otherwise a board floor, raised about a foot or 18 inches from the ground will be better.

5. Separate your rooster from the females until you wish to use the eggs for hatching. He will probably be all right then.

EDITOR AMERICAN POULTRY JOURNAL.

Dear Sir: As I am an admirer of the Buff varieties, would like to know the address of the two gentlemen who won on Buff Turkeys at St. Louis, or others.

W. H. A.

Richmond, Ind.

Write to Mr. T. E. Orr, Beaver, Pa., for the address of these gentlemen. Others you will find in the advertising columns of AMERICAN POULTRY JOURNAL.

EDITOR AMERICAN POULTRY JOURNAL.

Dear Sir: Please answer the following: How is the best way to clean a white chicken for the show room, and how should I clean their feet, combs and wattles?

C. N.

Comton, Ohio.

Wash the bird in a tub of warm water, using plenty of soap of a good quality. After thoroughly washing, rinse the bird in clean warm water, to which had been added a little bluing. After thoroughly washing the feet, combs and wattles, brighten them up by applying sweet oil two or three times and rubbing it in thoroughly.

AMERICAN POULTRY JOURNAL PUB. CO.

Dear Sir: Please answer the following question through your poultry journal:

I have nine Barred Rock pullets and one cockerel that I raised from a setting of eggs I bought last spring. As I do not want to mate the cockerel to the pullets from the same setting would it be all right to buy another setting this spring and, next season, mate the best cockerel from this setting to my present pullets, which would then be hens?

W. S. D.

Bechtelsville, Pa.

Yes.

EDITOR AMERICAN POULTRY JOURNAL.

Dear Sir: Which do you consider the best way to do, purchase two or three sittings of eggs or send for a trio of birds of the breed that is required. I was only thinking the eggs would travel to this country better than the

birds and perhaps come in a bit cheaper. You can answer through the JOURNAL.

R. R.

Bolton, Lancashire, England.

We believe that birds would prove the most satisfactory, as they will stand the journey better than eggs.

EDITOR AMERICAN POULTRY JOURNAL.

Dear Sir: Will you kindly answer the following questions in Question and Answer columns: Are onions good to feed chickens, and do they make the eggs taste. I have a Barred Plymouth Rock hen with a swollen comb. At first the comb started to swell at the back, and in a

short time it was five times as big as it ought to be, and in the middle it would turn black and began to rot off. I keep the hen in a warm place, so don't think it was caused by freezing. The hen is a little dumpy; otherwise she seems to be all right. Can you tell me what to do?

J. L. B.

Minneapolis, Minn.

Onions in small quantities are good for fowls; but if too much is given it will affect the flavor of the eggs. The comb of your hen has probably been injured in some way. Unless she is a very valuable hen, would advise you to kill her and thus get her out of her misery.

In the esteem of the Poultry Fraternity.

WHY do the 1905 model Cornell Incubators and the Peep-O-Day Brooders stand to-day **WITHOUT A RIVAL—WITHOUT A PEER**—on the face of the earth? Why do the successful men who are in the poultry business for a livelihood freely and unhesitatingly give them the preference over the Idols of the past whose ashes are still warm? **Listen and you will hear!**

The 1905 model Cornell Incubator

Positively and absolutely avoids "Dead Chicks in the Shell," that ever recurring and irremediable curse of "Non-Moisture" machines. The 1905 Cornell embodies all of the progress achieved in the science of artificial incubation during the past ten years, supplemented by numerous Cornell patented features, as follows:

Thermostat (Patent applied for).

Sensitive—Automatic—Positive—Precise. In hatching tests the Cornell 1905 Thermostat shows for each degree of heat twice the movement of the next best regulator on the market, and eight times the movement of the second best.

Automatic Moisture Device (Patent applied for).

Connected inseparably with the Cornell Heating System, automatic in action and responding to all climatic conditions. It affords to the eggs the requisite moisture and obviates "Dead Chicks in the Shell," that Affliction of Non-Moisture Machines.

Ventilation (Patented).

The Cornell Automatic Moisture Device permits furnishing to the eggs the essential continuous changes of pure, warm, moist air, to carry away the deadly carbon dioxide generated by the growing embryo, which would otherwise bank in the egg chamber, as in "Non-Moisture, Non-Ventilated" Machines, and fatally kill a large percentage of strong, healthy germs, and thus produce "Dead Chicks in the Shell," that malediction of "Non-Moisture Machines."

Circulation (Patented).

The pure, moist, warm air is spread equably and uniformly in horizontal layers from our galvanized Iron Heater (stayed interiorly with iron castings and outwardly iron capped) into the Heat Chamber, thence into the egg chamber and down between the eggs and then out, **once and for all**, through the bottom of the machine, at points opposite and on a parallel plane to the mouths through which it enters. This perfect system is supplemented by our **Patented Automatic Safety Banked-Air Valve**, found in no other machine in the world. This ideal circulation produces lusty, healthy chicks and lots of them.

Regulation (Patent applied for).

The 1905 model Cornell Incubator is the only incubator manufactured that combines a balanced system of **Construction, Heating, Ventilation, Circulation and Supplied Moisture**, making it easy for the operator to keep, continuously, a mathematically even and uniform temperature in all parts of the egg chamber, aided by the **Smokeless Heater and Lightning-Rapid Thermostat**.

Construction (Patented).

The case of the 1905 model Cornell Incubator is of inch thick Virginia Polished Chestnut—not $\frac{3}{8}$ inch narrow little boardlets. It is equipped with the Cornell Patented Table Top, protecting the finely adjusted Regulator mechanism from all outside interference. The Patented felted compound doors prevent the heat from sifting through. The piano fitting legs are adjusted without tools or trouble.

In Conclusion:

In the 1905 model Cornell Incubator and the Peep-o-Day Brooder we offer an **Invincible Team**, that will hatch every egg fit to be hatched, and bring to perfect maturity every chick that has been hatched.

THIS IS OUR GUARANTEE—or your money back for the asking.

They Always Win!

Doolittle's Partridge Wyandottes

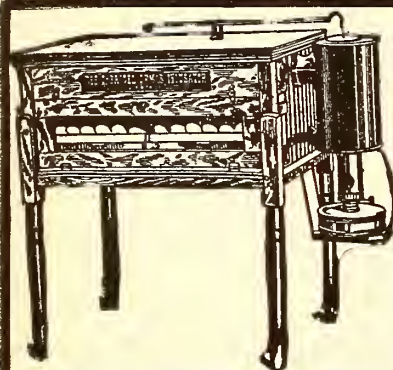

The strain that annually produces more prize specimens than all others combined. They have true Wyandotte shape, low, even combs, clean, yellow legs, with the grandest mahogany color and true Partridge markings.

Look at this Record—St. Louis World's Fair, 1904

With birds entered from Missouri, Indiana, Nebraska, Kansas, Ohio, Connecticut, Tennessee, Illinois, New York, Iowa, New Jersey, and Pennsylvania, my birds won 2d and 6th cock; 1st cockerel; 1st and 5th hen; 1st, 4th, and 5th pullet and specials for best colored male; best colored female and best shaped female. (no pens entered.) Who can beat it with ten entries in but a single class? This is nothing unusual for them. Send for card giving their Chicago and Boston winnings and you will see that it means something, and should interest you when looking for stock or eggs. To be in it means that you must get your blood where the champions are annually raised. A large color plate from life of a pair of Partridge Wyandottes mailed on receipt of ten cents in postage.

**FEED
HARDING'S
FOOD**

HENS OPERATING INCUBATORS.

We hear much of following Nature's plan in incubator hatching of chicks. All incubator makers endeavor to establish, as nearly as possible, natural conditions. It was reserved for Johann F. Siems, a German poultry specialist of Columbus, Neb., to take a step in advance of all other incubator makers and actually use the hen in his machine. Other incubator makers claim to have caught the trick from the hen. Mr. Siems claims not only to have learned from her, but inasmuch as her instinct is unerring, that the best hatching machine in the world is possible only by using that instinct during the entire hatching process. Hence he uses the hen, the common, natural hen, in his Natural Hen Incubator.

This puts the Natural Hen Incubator in a class by itself. It constitutes the widest kind of a difference in principle and operation between it and all other machines, which, as a matter of fact, do not differ widely from each other. Mr. Siems claims his plan to be superior to all others from two considerations. First, because it is the one natural plan. Second, because of the difference in cost. By the Siems' plan, as will be noted by the advertisement elsewhere, an incubator of ordinary size, say, for 200 eggs, is set up complete, ready for work, at the low cost of \$3. There are some 200,000 of Siems' Natural Hen Incubators now at work. The many strong testimonials in the Natural Hen catalogue attest their popularity. It is a book that certainly appeals to poultry raisers. Writing direct to the Natural Hen Company at the address given in the advertisement will bring it promptly.

GET MORE EGGS.

Now is the time to reap poultry profits. If you can keep your hens laying for the next thirty days there is a likelihood that you will clean up more money through your poultry yards than you can in any sixty days the rest of the year. To do this your hens need proper food. Nothing will help them more than a liberal use of cut clover or alfalfa, both of which are not only rich in protein and egg making materials, but also retain much of the natural tonic effects which the fowl gets from green foods in the summer time.

The feeding of cut clover has greatly increased in the past few years, since the introduction of the Humphrey Rapid Clover Cutter—a machine of large capacity, which reduces clover and alfalfa to one-eighth inch lengths and allows no long pieces to escape its knives. It will pay every poultry raiser to install one of these low-priced machines in his yards.

Send to Humphrey New Street Factory, Joliet, Ill., for his new book, "Poultry Helps," which is full of useful and valuable information for the poultryman.

A HANDSOME CATALOGUE.

**Well-Made Carriages and Harness at
Factory Prices Are Sold Under
a Strong Guarantee.**

For years people have been buying carriages and harness of the Columbus Carriage and Harness Company, of Columbus, Ohio.

The plan of the company is to sell direct to the customer from the factory. They guarantee to refund the purchase price on any vehicle not satisfactory, and to pay the freight both ways in case of dissatisfaction on the part of the purchaser.

This plan has met with the success it

deserves, and the saving to the buyer ranges from \$10 to \$40 on an order, according to the price of the job furnished. This is the only company in Ohio making all their own carriages, buggies and harness in their own factory, and selling them exclusively to the mail order buyer. Naturally the prices are much lower than the ordinary dealer can meet, and the price saved in the purchase goes into the buyer's pocket.

Every one contemplating the purchase of a carriage, buggy or horse trappings of any sort should write a postal card to the company for their handsome illustrated catalogue, which gives complete information as to their way of dealing.

A GOOD LITTLE POULTRY BOOK.

We take pleasure in directing the attention of our readers to a little book before us, entitled "Proper Care and Feeding of Chickens, Ducks, Geese and Turkeys." It is published by the Des Moines Incubator Company, Des Moines, Iowa, and is sold for 10 cents a copy. No reader will begrudge the small price to get the accurate specific information which this little book contains. It is in neat, compact form and gives directions and pointers in a way that they will be applied every day by the poultry raiser. The different classes of fowls are treated separately. Particular attention is given to right starting, the foods that are adapted and those not adapted to new born fledgelings. It is an especially valuable book for beginners. Old poultry raisers will get many valuable suggestions from it. A copy may be procured by sending 10 cents direct to the publishers.

THE LITTLE WEATHER COCK.

This is the very appropriate name that Mr. Geo. H. Stahl has given to an entertaining, interesting and really valuable little novelty which he will send free to any of our subscribers. It is a very fetching and saucy looking little rooster, so dressed that the color of its clothes surely foretells the weather—dry, wet or changing. It is really a scientific weather forecasting device. Mr. Stahl will send one free to any of our subscribers who will write to him for it, enclosing 6 cents for postage and packing and mentioning this paper. He will also send one of his new, large, illustrated catalogues of the famous Excelsior Incubators and the Wooden Hens, which he has manufactured for the past twenty years. His advertisement will be found elsewhere in this paper.

We recommend that our readers send at once. Address Geo. H. Stahl, Quincy, Ill., and do not forget to mention the AMERICAN POULTRY JOURNAL.

F. L. Waterman & Son, Barrington, Ill., won as follows in their Buff Wyandottes at Elgin, December, 26-30, 1904: 1st and 2d cock, 1st, 2d and 3d hen, 1st, 2d, 3d and 4th pullet, 1st, 2d, 3d and 4th cockerel 1st and 2d pen. Five exhibitors and forty birds in class.

Mrs. Tilla Leach, Cheneyville, Ill., the Barred Rock specialist, won 1st on pullet and 3d on cockerel, in strong competition at the late Illinois State Show, Peoria, Ill. Mrs. Leach knows how to produce the good ones. Write her for prices.

NINE BRAND NEW INCUBATOR AND BROODER IDEAS

Have You Seen Them?

If you haven't you'd better write at once for "the book" and read about them. Some of them are in the incubator and some of them are in the brooder. We've got them everywhere, and they're so valuable and at the same time so simple, that you'll wonder why on earth some one hasn't thought of them before. They are all new and fully protected by patents, and therefore will only be seen on

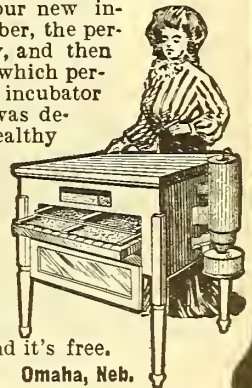

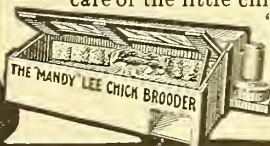

The "MANDY" LEE Incubators and Brooders

"You've certainly got them all beat on incubators and brooders," said a Chicago poultry crank the other day. "I thought I saw some good ones down at the 'big show' in St. Louis, but I didn't see anything like these"—and he didn't. When he saw our new incubator improvements—the protected egg chamber, the perfect air circulation, the life saving sub-nursery, and then the nursery proper with the door at the bottom which permits the transfer of the little chicks from the incubator without opening the door in front at all—he was delighted. But when he saw 100 bright, healthy chicks in the brooder—not a sick one in the lot—and saw how perfectly contented the little fellows were with our system of direct contact heat, he was fairly carried away, and you would be too. The old hen herself couldn't take care of the little chicks any better than The

"Mandy" Lee Brooder does. We can't tell you all about it here, but our catalog will and it's free.

Sold everywhere. Free trial sample for 2-cent stamp. Write for "The Shavers Guide and How to Dress Correctly."

The J. B. Williams Co., Glastonbury, Conn.

INCUBATOR CLEANLINESS NECESSARY.

Many experienced operators of incubators have often deplored the fact that many incubators have so little room for the little chicks underneath the egg tray. Then again a few machines have considerable room in this space, but the chick tray is so constructed that it is extremely unpleasant and difficult to thoroughly clean and disinfect the inside after the hatch is over.

To overcome these objections was a problem that set the Gem Incubator people to figuring. A great many incubator users unite in deciding that the Gem fulfills the necessary conditions.

It has a commodious and well venti-

lated chick tray underneath the egg trays. At the end of the hatch all the newly-hatched "puff balls" are resting comfortably in this tray. After the hatch is over the chick tray, egg trays and everything inside the cabinet can be removed, leaving a large, open, clear space to work in. Every experienced operator knows that an incubator must be free from filth and foul odors if high per cent hatches are to be expected.

This removable chick tray is one of the exclusive features of the Gem Incubator, and commends itself to every thinking poultry raiser.

There are other points of superiority about the Gem that would be interesting to mention, which are taken up in detail in the handsome new catalogue. This catalogue is free. Write to the Gem Incubator Company, Box B, Dayton, Ohio.

BUCKBEE'S BIG SEED CATALOGUE.

We wish that every reader of ours would send for a copy of Buckbee's Big Seed and Plant Guide for 1905. It is replete with good illustrations, showing many vegetables and flowers in their true natural colors. This book contains a vast fund of information of especial value to buyers of seeds and plants. Buckbee's seeds are the best that money can buy. They are "full of life" simply because Buckbee tests all his seeds by planting them in the ground. His expert tester has a cast iron rule that 98 out of every 100 seeds planted must produce healthy, vigorous plants or the seed is rejected and sent to the feed bins. "Full of life" is Buckbee's motto and the busy bee is his trade mark. Value up to the brim is evidenced in every price quoted. It pays to plant Buckbee's seeds and plants. The Big Buckbee Seed and Plant Guide is free to all our readers who mention this paper. Address H. W. Buckbee, Rockford, Ill.

ELKHART, IND.

A good many people know this town because every Lake Shore passenger train stops there to change engines. Even the famous 20th Century Limited which does not enter the large city of Buffalo, N. Y., and passes through a great many other large places without stopping, halts for a few moments' rest at Elkhart. But many thousands more know Elkhart because it is the home of the famous Elkhart Buggies, and thousands upon thousands of these sterling vehicles are in daily use all over the country and abroad. For thirty-two years the Elkhart Company has been selling their product direct from the factory to the consumer. Their Catalog is most complete, showing over 200 styles of Vehicles and 65 styles of Harness. It is gladly sent free to any reader of this paper who will write for it. Address Elkhart Carriage and Harness Mfg. Co., Elkhart, Ind.

FOR YOUR FACE'S SAKE.

If your face burns and itches, after shaving, don't swear at your razor or break up the furniture. Stop using cheap soap, and try real shaving soap, made especially for that purpose. The J. B. Williams Co., Glastonbury, Conn., have been making shaving soap for nearly

three-quarters of a century. It will take but a moment to send for a free trial sample, as per their offer in another column, and you will reap the benefit all your life, and your wife will have a better natured husband.

BUY POULTRY FOODS.

One of the best places to buy poultry supplies, and particularly poultry foods, is Darling & Co., Union Stock Yards, Chicago, Ill. Their prices may not be as low as some, but price is not the whole nor in fact the chief consideration. What poultry raisers want to make sure of is that the ready prepared foods they buy really do contain the valuable elements claimed for them. The high quality of Darling & Co.'s Pure Poultry Foods cannot be questioned. In the first place these people have the facilities for getting raw materials that few poultry food makers enjoy. Their location at the greatest packing center in the world gives them this. In the second place this company has a standard that must be reached by everything it manufactures.

Their foods for egg production, for chick feed, for growth and development are not only the highest quality of their kind, but they are uniform. For example, take their beef products, such as beef scraps, beef meal and concentrated meal. The highest authorities we have, the Government Experiment Stations, highly endorse the use of this class of goods, but warn poultry raisers against stale products, etc. This is where Darling & Co.'s scrupulous care has served them a good turn. Their poultry foods not only run exceedingly high in protein, but have little or no fat. Protein is the essential element of any poultry food. An excess of fat is not desirable. In addition, they fulfill the Experiment Station's other requirements, namely, the foods are fresh, sweet and free from taint.

About everything a poultry raiser wants to use may be had from this company. They are specialists in this line.

Darling & Co.'s Pure Poultry Foods give results. The majority of the large and successful poultry raisers in this country and elsewhere feed Darling's products exclusively. Do you? If not, a trial would convince you of their merits.

Darling's little pamphlet, entitled "Fill the Egg Basket," should be in the hands of every poultry raiser. You do not have to be a patron of the house to

A Hen's Teeth

are in her stomach. Give her good teeth and she'll digest good food for you and turn it into profit. The poultry raisers who supply their hens with

Mico Spar Cubical Grit

find it never loses its sharp points and corners. It is the best kind of teeth you can give your hens. Contains iron for yolk; lime, soda, magnesia for shell. It costs a cent a pound in hundred pound bags at your dealers. Agent wanted in every town. Send for free folder that tells all about it.

CONTENTS OF THE JANUARY NUMBER OF THE AMERICAN BOY.

The twelve stories, nearly all of them illustrated, in *The American Boy* for January ought to make the boys' mouths water. These stories are of great variety, so that every sort of a boy ought to be pleased. Their titles are: "Up a Limb," a hunting story; "For the Mikado," a Japanese-Russian war story; "The Scoop of the Bald Eagle," a newspaper story; "The President's Cadet," a story of General Grant; "Pablo Mariscal," a Spanish-American story; "The Wire Fence Telephone," a farm story; "My Four Years at West Point," a school story; "Joyce Thatcher's Race," a farm story; "The Pilot Boys of Norway," a sea story; "A Race with a Stampede," a story of the plains; "Sufficient Unto the Day," a humorous story; "One of the Most Glorious Deeds Ever Done by a Boy," a story of heroism. Sixty-nine illustrations in all. \$1 a year. The Sprague Publishing Company, Detroit, Mich.

A MUSICAL NURSE.

A friend of mine who could play as very few girls can told me she was going to be a nurse. My first impulse was to exclaim: "But your music! You will waste your talent." Then she told me she believed a nurse who was a musician could do more to heal nervous patients and those suffering with racking pain than many remedies used in the medical world. "I play to the listless and to those in pain," she said, "and their eyes brighten and a flush comes to their cheek. Or if it is the tired, overstrained patient, then it must be lullabies and restful tunes, not the martial music that sends the blood pulsing through the veins. A musician must not give the wrong tunes, but feel the pulse of the patient's mood, and invigorate or soothe as the need be."—Edith Livingston Smith in *Good Housekeeping*.

NEW FEATURES IN THE CENTURY.

Early numbers of *The Century*, it is announced, will bring, among other good things, fiction from Alice Hegan Rice, Edward W. Townsend, Eden Phillpotts, Maud Wilder Goodwin, Caroline Abbot Stanley, Margherita Arlina Hamm, Kate Douglas Wiggin, Maurice Francis Egan, Anne Warner and Helen R. Martin; and articles of importance and value on "Korea and Its Emperor," by William F. Sands, former adviser of the emperor; "The Everglades of Florida" and "Philadelphia in Art." A notable feature of the February number will be the story of "The Boston Symphony Orchestra and Its Founders," by Richard Aldrich, illustrated with numerous portraits and sketches. Early issues will contain, too, articles on the miracles wrought by Luther Burbank's work in breeding fruits and flowers; edible cacti, the white blackberry, the plumcot, etc., etc.

We are pleased to place before our readers the announcement of the A. A. Berry Seed Company, the big seedsmen of Clarinda, Iowa. Mr. Berry, the head of this substantial firm, is one of the best known seedsmen in the Trans-Mississippi country. His experience in growing and curing of seed corn, garden and field seeds, taken together with his known integrity as a business man and the location of his plant in the very heart of the great seed producing section, all conspire to make the A. A. Berry Seed Company one of the best seed houses in the United States to patronize. By so doing you get the best varieties and the best quality that can be produced in seeds. The business of this firm has grown to such an extent that assistance in its care and management became necessary. To this end he has secured the services of Mr. Ahfeldt, a young man of wide experience and fine executive ability. The year 1905 finds the A. A. Berry Seed Company better equipped than ever as to shipping facilities, supply of seed and general equipment to serve their hosts of customers. Their fine new catalogue explains their new premium plan. It is free for a postal, and it would be well to send for this, as it is a valuable compendium of useful information to farmers.

 P. O. Address, R. F. Dr., Walworth, Wis.

White Wyandottes and White Crested Polish
 Won wherever shown. No stock for sale. A limited number of eggs from the finest in the world.
 Send for circular and show record.

THOS. P. SMITH

HOOPESTON, ILLINOIS

Judge S. T. Lea says that "Alice White" is the most beautiful and nearer perfection than any bird he ever handled in 20 years judging poultry.

The Gaines' White Ply. Rocks

BRED TO WIN-AND DO IT

We offer a prize of \$50 in gold for best pair, (cockerel and pullet) Free circular which explains, on request. The Gaines White Rocks won at Charleston, S. C., Nov. 21 to 26, 1904. Pullets, 1st, score 97¼; 2d, 95½; 3d, 95¼; tie 4th, 94¾; also 3d pen. Male birds all in bad feather. Eggs for hatching but no stock for sale till fall.

E. H. GAINES, Prop., GAINES' POULTRY YARDS, GAFFNEY, S. C.

HALLOCK'S STRAIN OF QUALITY WHITE WYANDOTTES

Won at the Madison Square Garden Show, New York, January, 1905, on seven entries, 1st hen, 1st cockerel, 1st pullet and 1st pen, in the hottest class of White Wyandottes ever gotten together at New York City. I sold the cockerels heading the first prize pen for \$200.00 and one of the pullets out of the same pen for \$100.00. I could afford to sell this cockerel as I have five of his full brothers just as good to breed from. All my other New York winners are in my yards. Will sell eggs for hatching at \$3 per 13, \$5 per 26, \$15 per 100, and guarantee seven chicks from each sitting. Order direct from this advertisement. Stock sold on approval.

ROSS G. H. HALLOCK,

6314 Clifton Ave., St. Louis, Mo.

Black Langshans

First prize at World's Fair, Kansas City, Dallas and Houston. Won the \$50 cup at Shreveport over all breeds; pen scored 191. Record for 1904 birds score 95 to 95½. Eggs \$3 for 15. Birds for sale, satisfaction guaranteed.

J. E. R. CHILTON, Dallas, Texas

...ST. LOUIS WINNERS...

Hislop's American Strain of Toulouse Geese and his Golden Wyandottes again compete with the best in America and at the largest show—the great St. Louis Exposition. Geese, 3d and 4th cock; 1st and 3d cockerel; 3d and 7th hen; 5th and 6th pullet. Won more points than any other one exhibitor in this class, and club's cup. Golden Wyandottes—the strongest class of this variety ever exhibited in the United States—4th cock, 4th cockerel, 1st and 3d hen, 5th pullet and 4th pen. Don't place orders till you see his circular giving prices, Pan American and Chicago winnings, etc., etc. Try his **MITE DESTROYER**, the most lasting and the cheapest ever offered the public. Satisfaction. Reference, First National Bank of his town.

B. F. HISLOP,

Milford, Ill.

Millville Poultry Farm Co.'s

PLYMOUTH ROCKS AND WYANDOTTES

At World's Fair, St. Louis

win more firsts than any three other exhibitors of their varieties. A grand total of 55 regular and special prizes in hottest competition ever known, makes best record ever made on their specialties. We offer you sons, daughters, brothers and sisters of our World's Fair winners at fair prices. Can sell you A 1 breeding birds or crack show birds, as you may choose. During December will sell a selected Pekin drake and five April ducks (unrelated) for \$15. In Plymouth Rocks we have Barred, Buff and White varieties. In Wyandottes, Buff and White. New 32-page illustrated catalogue is free, and we hope you will write your wants to

MILLVILLE POULTRY FARM CO.

M.F. DELANO, Pres.

Box J, Millville, N. J.

FOR THE HOUSEWIFE.

Writing on "Various Economies" for the young housekeeper in the February Dealerator, Isabel Gordon Curtis discusses a fruitful topic in how to keep expenses within the income and gives some practical suggestions that will appeal to the housewife who is yet unskilled in her art. Other features of domestic interest are "Valentine Luncheon Novelties" and "Ideas for a Colonial Tea," illustrating original dishes for seasonable entertainments, and there are many practical recipes under the topics, "Left-overs in Original Adaptations," "Novel Celery Combinations" and "Scandinavian Rosettes," in addition to miscellaneous household hints.

Kansas City, Mo., Aug. 30, 1904.
 Mr. W. F. Chamberlain,
 The Perfect Chick Feed Man,
 St. Louis, Mo.

Dear Sir: I write to say that I have been using your Perfect Chick Feed for a long time, and I have had better results feeding it than I have ever had before. I tell my customers and every one that I meet to use Chamberlain's Perfect Chick Feed if they want good, healthy chicks.

I can take one hundred little chicks, put them in the brooder I am now using, and feed them on Chamberlain's Perfect Chick Feed and raise every one of them. I have done it, and I can do it again. This feed well deserves the name perfect. Yours respectfully, J. P. DILYEA,
 1407 Grand Avenue.

Charles G. Miller & Son, Boonville, Mo., report the following grand winnings on their noted Black Langshans: "At Illinois State Show, January 5 to 9, we won 1st cock, 2d and 3d hens, 1st, 2d and 3d pullets and 1st pen. We entered no cockerels. During the week ending January 14 we had two exhibits of nine birds each and won at Kansas State Show 1st cock, 1st and 3d cockerels, 1st and 3d pullets, 1st and 3d hens and 1st pen. At Denver (Colorado State Show) we won 1st cock, 1st and 3d cockerels, 1st hen, 1st, 2d and 3d pullets and 1st pen. All of the above bred by us. At the above three shows with the strongest competition in the country we won every first entered for except one."

At the International Show, held at Detroit, January, 1905, Charles H. Ring, Decatur, Mich., won 1st and 2d cock, 1st and 2d hen, 1st, 2d and 3d pullets, 1st pen and silver cup in his White Wyandottes. In White Rocks he secured 2d and 4th hen and 2d cock. Mr. Ring has something to say of interest to all White Wyandotte and White Rock breeders in his ad in AMERICAN POULTRY JOURNAL. These winnings were under Judge Thos. F. Rigg.

Otter Creek Poultry Farm Co., Watertown, N. Y., breeders of Single Comb Black Minorcas, Single Comb White Leghorns and Barred Plymouth Rocks have a change of ad this month in which they are offering choice young stock for sale at very tempting prices. Also eggs from their prize winning matings. This firm has been breeding and shipping thoroughbred poultry for the past fifteen years and they guarantee satisfaction in every particular. They raise hundreds of fowls every year and can always fill orders promptly and their prices are very reasonable, considering quality. Write for circular and mention AMERICAN POULTRY JOURNAL.

Brent & Eddy, Oconomowoc, Wis., breeders of Cornish Indian Games and White Wyandottes, exhibited their Indian Games at the Madison Square Garden Show, January 3-7, 1905, and won 4th and 5th cockerel and 4th pullet. This was a very creditable showing in an exhibition where the class of Indian Games is always strong, and proves that this firm knows how to breed the prize winners. Write them for prices and particulars and mention the AMERICAN POULTRY JOURNAL.

At the Michigan State Poultry Association's show at Detroit, January 2-5, 1905, the Cherry Red Strain of S. C. Rhode Island Reds won as follows, Judges Butterfield and Tucker placing the awards: 1st and 2d cockerel, 92¾, 92; 1st and 2d hen, 93-92; 1st and 2d pullet, 91-89¾, cut one on weight. This shows that Elmer B. McGaw, Ypsilanti, Mich., breeds good birds and is not afraid to show them.

J. A. Barnum's Barred Plymouth Rocks Win Again—At the Michigan State Poultry Show at Detroit, Jan. 3-6, '05. J. A. Barnum, Tekonsha, Mich., reports winning in hot competition first ckl., first hen and first pen on his Barred Rocks. No cock shown.

In the past 14 months Mr. Barnum has exhibited twice, winning a grand total of 6, 1 first, 1 second, 1 third and special for best cockerel and pullet besides tying for another second and third. Six firsts out of 7 competed for.

Mr. Barnum is pleased to answer all inquiries and mails a neat catalogue with his reply.

The second edition of the Poultry Publishing Co. Desk Book, Directory and Buying Guide is now issued. This gives the names of all the prominent poultrymen arranged by the breeds that they raise; also a complete list of manufacturers and dealers in incubators, poultry supplies, etc.

This is issued by the Poultry Publishing Company, Station B, Toledo, Ohio. A few copies of the first issue are left, and both issues will be sent for the price of one while they last.

Look up their ad in this issue, as this is a very excellent thing for all poultry buyers to have.

John C. Plane, Belvidere, Ill., the S. C. White Leghorn specialist, has purchased a twenty-two-acre farm one mile west of Belvidere, to which he will move in time for spring hatching. Mr. Plane's success in the poultry business is the main inducement for branching out in the industry. This farm is an ideal location for poultry and Mr. Plane is making special efforts to add to the already enviable reputation he has made as a breeder of Single Comb White Leghorns.

Mr. J. A. Leland, Springfield, Ill., reports that he made the following winnings: At Springfield, Ill., November 28 to December 3, 1904, I won all first prizes upon Rose Comb White and Brown Leghorns, Single Comb Buff Leghorns, Pekin Ducks and Embden Geese, also 2d and 3d White Wyandotte hens, 2d and 3d cocks and 3d hen Light Brahmas, with scores of 90 to 96 points by Heimlich.

J. A. Leland, Springfield, Ill., writes that he has one hundred good to choice Rose Comb White Leghorns, a few very choice Pekin Drakes and some Rose Comb Brown and Single Comb Buff and White Leghorns for sale at low prices, quality and breeding considered. Send for his new circular and mention American Poultry Journal.

Through error we located Orville D. Chinn at Kehoe, N. Y. This should have been Kehoe, Ky. Mr. Chinn breeds Black Breasted Red Games. He has been twelve years at the business and knows how to produce the good ones. Our readers who are interested in this variety should write him for prices and particulars.

At the Missouri State Show, Moberly, January 3 to 6, 1905, H. P. Mason, the Buff Rock specialist of Fayette, Mo., kept up his wonderful record by winning 1st and 2d cock, 1st and 2d hen, 1st and 2d cockerel, 2d and 5th pullet, 1st and 2d breeding pen and the State Silver Cup for best cock, hen, cockerel and pullet.

C. E. Vass, Washington, N. J., the Buff Orpington specialist, won as follows at the World's Fair, St. Louis: 1st and 3d hen, 4th cockerel and 7th pullet. At Madison Square Garden, N. Y., 2d cockerel in a class of thirty-nine birds. Write him for prices and particulars and mention AMERICAN POULTRY JOURNAL.

The Edgar Poultry and Egg Farm Company, Richwood, Ohio, have a change of ad this month. This is an incorporated company, with a capital stock of \$15,000, and are breeders and dealers in several of the leading varieties of thoroughbred poultry. Look up their ad elsewhere in this issue and write them for prices.

Mrs. Tilla Leach, Cheneyville, Ill., won on her Barred Plymouth Rocks at Peoria, Ill., as follows: 1st pullet, 3d cockerel, in the hottest kind of competition.

F. A. Crowell, Granger, Minn., won as follows on his S. C. Buff Orpingtons at Cresco, Iowa: 2d cock, 1st cockerel, 1st and 2d hen, 1st pen.

SURE HATCH INCUBATORS

Hatch Chickens Every Time; Hatch Live Chickens; Hatch Every Fertile Egg

Cost little to run. 30 cents in oil brings off a hatch. Easy to operate—a child can do it. Make big money on small investment. Last a lifetime. Built of California redwood. Three walls, asbestos lined; solid as a rock, yet very light. California redwood never swells or shrinks, warps or cracks.

Asbestos is the proper lining for incubators—reflects heat from top of machine onto the eggs. Mother Nature way. Have 12-ounce cold-rolled copper pipe heating system; makes steady, even heat all around sides and over top. Copper water heater has 128 square ins. heating surface; largest heating surface ever put on an incubator, insuring perfect temperature at minimum cost. Regulator on inside of machine, already adjusted. Cannot be knocked out of position or broken. Everything about the Sure Hatch Guaranteed by \$100,000 for Five Years. The Sure Hatch is

SOLD ON 60 DAYS' TRIAL

which gives you an opportunity of taking off two hatches, and thoroughly trying machine. Over 50,000 in use and giving satisfaction. 10-egg actual size 120, with all improvements worth having on an incubator, shipped to your station, freight prepaid east of the Rocky Mountains, for..... **\$10.00**

Most liberal offer ever made by any concern. Send \$10.00 and we will ship machine at once. You have privilege of trying same for 60 days. If not satisfactory money will be refunded. Shipments can be made immediately. If you live east of the Mississippi river, address Indianapolis, Ind. If west, Clay Center, Neb.

Free Catalogue now ready. Address

DON'T BURN MONEY

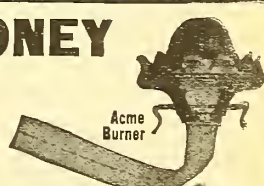

SAVE HALF

and get more heat and better light, by using

ACME SPECIAL BURNERS

Acme Triple Burner

Acme Burner

Made in two sizes, No. 1 and No. 2. The No. 2 will make more heat and light than any No. 3 burner, and use 20 per cent less oil. The Acme Trip burner saves 1/2 the oil for incubator use, because regulator turns flame up or down as needed. Can't over-heat or char the wick. The Acme Wick requires no trimming, is special close woven and twice as thick as other wicks, and enclosed in seamless metal tube with composition burner tip. As the oil passes through this composition, it is purified and converted into gas, burning with an intense heat and a brilliant light.

NO SMOKE - NO SOOT - NO OFFENSIVE ODOR

These wicks are for the Acme Burners only, and will last from 30 to 60 days for incubator use and 12 to 18 months for ordinary house use. Acme Burners fit any lamp. Give size of lamp collar when ordering. The Acme Automatic Gas Valve saves 75 per cent of gas for incubator use, because the regulator turns the flame down or up as needed. Burner tip can be located any distance and in any direction from the valve. For instance, burner can be placed under brooder hover and the valve remain on outside where it can be readily connected with regulator. Price of Acme Burner with wick, either size, pre-paid, 75c. Price of Acme Trip Burner with wick, either size, pre-paid, \$1. Price of extra wicks, either size, pre-paid, 10c each, 3 for 25c. Send for our complete catalogue of the Acme Compound Regulators, Acme Automatic Lamps, showing our latest combined damper and flame regulation, Incubator Fixtures, including the famous

1.50 and What it Will Do

ORDER NOW

The New Standard of Perfection, which will soon be issued by American Poultry Association, is in such demand that the sooner you get your order in the better chance you stand of getting one of the first editions. The Standard is a necessity to every poultryman. It is the authority which judges go by at the poultry shows. It describes every standard variety, giving the correct shape, size, color, etc., that a perfect bird should be. With a copy of this book you can judge your own fowls. It enables you to know your best birds, which to take to shows, which to mate for best results. The book will contain over 300 pages with nearly 100 illustrations. The price of it made by the American Poultry Association is \$1.50.

But the Special Offers of

American Poultry Journal

Help you get the New Standard cheaper

1.—Send us One New Subscription to the American Poultry Journal at its regular price of 50 cents a year and we will let you have **The New Standard for \$1** instead of \$1.50.

2.—OR—Send us Two New Subscriptions at 50 cents each, and you can have **The Standard for 85 cents** instead of \$1.50.

3.—OR—Send us Three New Subscriptions at 50 cents each, and you can have **The Standard for 75 cents** instead of \$1.50.

4.—OR—Send us Four New Subscriptions at 50 cents each, and you can have **The Standard for 50 cents** instead of \$1.50.

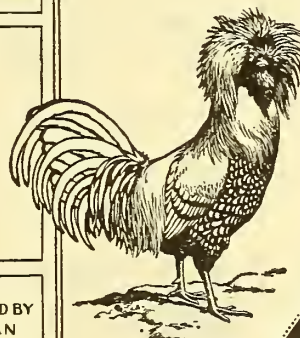

5.—OR—Send us Five New Subscriptions at 50 cents each, and you can have **The Standard for 25 cents** instead of \$1.50. 6.—OR—Send us Six New Subscriptions at 50 cents each, and **WE WILL GIVE YOU THE STANDARD FREE.** Address

WILBER BROS.

Box B, Petros, Tenn., U. S. A.

The Victor Book Tells

How to Make Money in the poultry business. How to have laying hens when eggs are dear. How to get broilers on the market while prices are up. How to raise the heaviest fowls. Hundreds of hints and helps that will make it valuable in any poultryman's library. A well-known authority says the article on the development of the chick in the shell is the finest treatise on the subject ever written. The practical experiments our experts describe show the lines on which the most successful work can be done.

Our machines are not experiments. They are the product of science, long experience and 37 years' continuous operation of the same plant. Victor incubators will not warp, twist or crack from the effect of green lumber. That we are now using has been in our yards over two years. You get full fourteen ounce copper in the tanks and boilers. We build for service and our machines are in use year after year.

The Story of Victor Incubators from the rough lumber to the finished machine; all the points in design, construction and operation which make it the perfected machine. It gives you the reasons why it is best for you to buy a Victor. We tell you just what you would learn if you came to our factory and saw us build the machine—just what you would be told by those who are using our machines. We have not made a single statement in the book which is not backed up by the actual facts. We would not dare to do otherwise, because with every machine we sell goes our bond to take it back and refund the money if it is not in every way up to our description.

When you get a Victor you get Incubator Satisfaction. Anybody in Quincy or who has ever bought from us will tell you you are safe in dealing with us. Victor Incubators and Brooders were used exclusively by the Model Poultry Farm at the St. Louis World's Fair and we have a little leaflet about their experience which we will send you with the Victor Book.

1867
Established

A Telephone for the Country Home

The telephone in the country home is not a luxury—it's a money-saving investment that brings returns every day. Keeps the farmer's family in close relation with the neighbors, saves many a trip to town, and helps to make the young folks satisfied with the farm by giving them advantages like their city cousins.

Stromberg-Carlson Telephones

Are the right telephones for country homes. They work right, stay right, and the price is right. Our Book F-81 "Telephone Facts for Farmers"—gives complete information on how to organize, build, equip and maintain a telephone line. Farmers are building lines all over the land. Why not you? Write for the book and see how cheaply it can be done. Our book 81 tells how others have built rural telephone systems. Both books are free. Address nearest office today.

STROMBERG-CARLSON TEL. MFG. CO., Rochester, N. Y., Chicago, Ill.

PAGE POULTRY FENCE

THE STAND-UP KIND made of the same strong quality of coiled wire as Page Stock Fences—stretches up like a fence, requires fewer posts and no top or bottom boards. 20, 23, 26 or 28 horizontal wires, 48, 54, 72 or 78 inches high, with bottom spaces only 1½ inches. The intermediate horizontal wires are number 14 and stand a strain of over 900 pounds each, while the top wire and bottom wire are even larger and stronger. All wires are heavily galvanized—

A POWERFUL FENCE

—Fences poultry in, stock out—costs no more erected than common nettings and will outlast 20 of them. If you want to pasture your bull next to your poultry yard, no other poultry fence will do. Leading poultrymen all over the country endorse Page Poultry Fences. Our catalogue tells why they are better investments. It costs you nothing to investigate.

90 DAYS' FREE TRIAL—Let us tell you about our 90 days' free trial offer on Page Poultry Fences.

FREE PARING KNIFE

To all needing fencing, who will write for catalogue, we will send a sample of our wire made up into a Paring Knife, which illustrates the superior quality of open-hearth, high-carbon steel used in the manufacture of Page Wire.

JOLIET, ILLINOIS

A "Ringlet" 1st Prize New York Cocker and two of his Sons.

"RINGLETS" Soar Still Higher.

At the Imperial Show of the Nation, Madison Square Garden, New York, January, 1903.

E. B. THOMPSON'S BARRED P. ROCKS

Stamped their superiority in the most decisive manner, winning again the Superb Challenge Trophy, value \$100, for best cock, cockerel, hen and pullet. This is the third time the "Ringlets" have won this grandest of all trophies, giving them now absolute and final ownership. In this "COLOSSAL CONFLICT" the "Ringlets" lifted the great National Sweepstakes Cup presented by the American Plymouth Rock Club for best cock, cockerel, hen and pullet. My Barred Rocks won double the number of silver cups and special prizes of any competitor, including the sweepstakes special in gold for best Plymouth Rock on exhibition, male or female any variety.

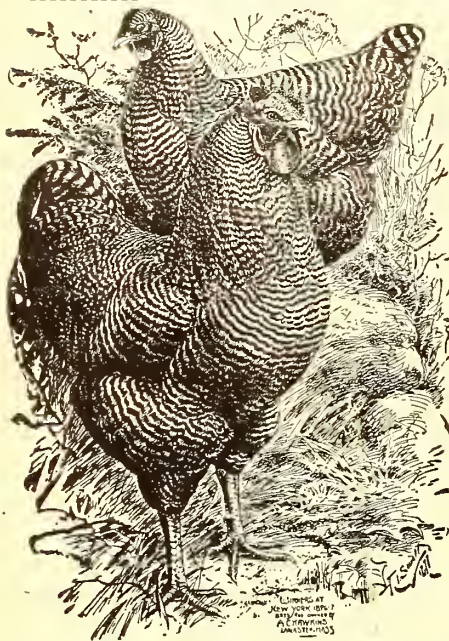

The "RINGLET" World's Record of four years in succession at New York is a page of history. The "RINGLET" World's Record of first on exhibition pen at this great show, three years in succession, is the undisputed champion.

The "Ringlet" clean sweep 1st, 2d, 3d, 4th and 5th prizes on pullets has never been approached at Madison Sq. Garden, and stands alone and unequalled. The "Ringlets" have won at New York—exhibited by me personally—a grand total of 87 prizes. 36 of these are 1sts and specials, being more than double the number of 1st and special prizes won by any competitor in the history of the show.

GRAND STOCK FOR SALE

In any number. Rare bargains for yearling breeders in lots of a trio or 100. Show birds fit to win in the fastest company—600 choice breeding cockerels. Richly illustrated 36-page catalogue on application. It is full of original illustrations of New York winners from life. Eggs from finest exhibition matings. One setting \$3, two settings \$9, three settings \$12, four settings \$15. Address

EGGS FROM PRIZE MATINGS.	
1 Sitting, \$5.	3 Sittings, \$10.
2 Sittings, \$8.	5 Sittings, \$15.
Per 100, \$20.00.	

Have won more Prizes at the Leading Shows of America and England than all others. My matings for 1900 are the best I ever owned.

At the Great National Show, WASHINGTON, D.C., in hot competition with over 300 birds of these varieties, the best that could be found regardless of price, I won 45 Regular and Special Prizes on 39 Entries, including First Prize on Breeding-Pen in each variety, Special for Best Display in the American Class, Special for Best Exhibit of Plymouth Rocks, Sweepstakes Special for Best Cockerel in the show (Bantams excluded), and this on my First Prize Barred P. Rock Cockerel. My winning White Wyandotte cock was pronounced by the judges to be the best they had ever seen. I won twice as many first prizes as all other exhibitors of these varieties. My BUFF ROCKS, at BOSTON, 1899, in hot competition, won more first and special prizes than all others. My customers are winning all over the country. If you want the BEST, write me. Hundreds of Choice Exhibition and Breeding Birds at honest prices. Catalogue of America's finest Plymouth Rocks and Wyandottes free.

A. C. HAWKINS, Lock Box 25 Lancaster, Mass.

OUR HONORS FOR 1904.

we would call your attention to the honors conferred on our strain of

BUFF WYANDOTTES

the past season. Chicago, Dec., 1904, "rare five firsts," four seconds, three thirds, three fourths, one fifth; \$25 cup for display; all specials. World's Fair on eight entries, 1st cock, 2d cock, 3d hen, 6th cockerel, 6th pen. An unequalled winning and a remarkable victory over all competitors. As the most representative breeders of Buff Wyandottes we were selected from the thousands who breed them to have the only exhibit at the World's Fair where our stock was shown during the whole exhibition. It costs no more to purchase stock from us than the "just as good," and you get the breeding quality that will reproduce for you a high class of stock. We mate the stock for best results. You have the benefit of our experience. We solicit your inquiries. Catalogue free. Twenty odd pens mated for the egg trade. Please write us to-day.

ACKLEY & PAGE

Largest Breeders of Buff Wyandottes in the World.

Upon thorough trial, conducted by yourself on your own premises, if you are not entirely satisfied of the superiority of

The Reliable INCUBATOR

you are to get your money back. The latest improvements on these non-moisture machines have placed them a little above the reach of all competition. These are the machines that are built right, run steady and uniform as a clock, and have the perfect system of automatic heating, ventilation and regulation.

The Reliable Incubators and Brooders are designed right, do their duties according to that design like perfect machines should, and bring the results.

Send 10 cents for postage and get the greatest Incubator and Brooder Catalogue and Poultryman's Guide combined ever issued. Address

Dept. B, Rochester, N. Y., U. S. A.

EGGS FROM HIGH SCORING White Plymouth ROCKS

Pen No. 1 is headed by first prize cockerel at Chicago, 1904, mated to pullets scoring from 94 to 95. Pens 2 and 3 are headed by 1st and 2d cocks at Kankakee, mated to hens and pullets scoring 93½ to 95. Considering the quality of these matings I am selling eggs "dirt" cheap, only \$2 per 15. **White Holland Turkey Eggs**, from as good stock as you will find anywhere, \$3 per 9. Send for free circular.

FRANK J. HICKS

Onarga, Illinois

Buff Rock Winners

are what Mason's eggs will hatch for you. Unsurpassed show records. Stock for sale. Eggs \$5 per 15 straight. No better birds in the world. Order now.

H. P. MASON, Buff Rock Specialist, Fayette, Mo.

Barred Plymouth Rocks

**FIRST COCKEREL,
FIRST HEN,
FIRST PEN.**

I won **Three Firsts** out of four competed for in hot competition at the State Show at Detroit, January 3-6, 1905. No cock shown. Don't look farther for better stock. I grow my own prize winners and use them in my breeding pens. Nine brothers of 1st cockerel for sale. Also a few pullets. Eggs \$3 per sitting, \$5 two sittings. Orders booked now.

J. A. BARNUM,

Tekonsha, Mich.

Culbert's Barred Rocks

are better than ever. Made a clean sweep of the Pontiac Show, Dec. 27th to the 31st, 1904, winning 22 regular and all specials and silver cup for best display in Rock class—Barred, White and Buff competing. Send for circular; it is now ready. Sent free. Orders booked now for eggs. A few more cockerels and pullets for sale; hot ones for the money.

JOHN CULBERT,

Braceville, Ill.

Barred Rock Specialist.

Plane's S. C. White Leghorns

Have won in the hottest competition in the country, many of them scoring 96. He has winners for you and score cards for them if desired. He guarantees satisfaction. Reference, First National Bank.

Catarrh Sufferers!

Send me your name and address and I will send you formula for a treatment that cured me, has cured hundreds and will cure YOU, as surely as day follows night. J. Russell Scott, Jackson, Mich.

12 Turns Kills All The Lice

An easy way to get rid of lice—easy on the fowls—easy on the owner. Simply sift lice powder into the machine, put in a few hens, turn the crank slowly a dozen times, let them out and see the dead lice fall off their bodies.

Lightning Lice Killing Machine

wastes no powder, doesn't choke or harm fowls, can't break their feathers and makes fowls contented, fat and lively. That means more eggs and sweeter flesh. Thoroughly cleans 100 hens or 300 chicks in 60 minutes. Handles any fowl from smallest chick to largest turkey. It puts the powder next to the skin and makes its effect instantaneous—quick as lightning. Illustrated catalog with full explanation, free.

Charles Schild Co., 401 Detroit St., Cleveland, Ohio

BUFF ORPINGTONS

World's Fair Winners

at the largest poultry show ever held, with the strongest class of Buffs ever brought together, we won seven out of a possible ten firsts. This duplicates our Chicago record, where for four years we have won more firsts than all competitors combined. Circular free.

SINGLE AND ROSE COMB

Prize Winning Stock for Sale. We will not exhibit any more this season. J. M. WILLIAMS & CO., Box B, No. Adams, Mich.

BAILEY'S BROWN LEGHORNS AND BARRED PLYMOUTH ROCKS

Our Leghorns won 1st on cockerel, 2d on pen and silver special for best cockerel in show at Denver, 1905. The Best in the West

Cornish Indians and W. Wyandottes

Our Late Show Record on Cornish Indians.

1st cock, 1, 2, 3, 4 hen, Chicago, 1903; 1st cockerel, 1, 2, hen, 1, 2, pullet, Chicago, 1904. 2d pullet, 3, 5 cockerel, three entries, Chicago, 1905. 4th pullet, 4, 5 cockerel, five entries, Madison Square Garden, N. Y., 1905. These winnings in strongest class of "Indians" in the United States. First prize cockerel St. Louis La. Purchase Exposition heads our first pen. Eggs from exhibition pens \$3 per 15.

Our pen of

Stay White Wyandottes

purchased from one of the best known breeders of this variety in the east, have furnished us a limited number of splendid trios in last season's young stock. Prices right. Eggs from four pens of carefully mated White Wyandottes \$2 per 15.

BRENT & EDDY - Oconomowoc, Wis.

Petersen's Houdans

Reign Supreme at the Nation's Greatest Shows

My record has never been approached by any breeder.

BOSTON, 1900. In world famous competition, 135 Houdans exhibited. I won 1st cock, 1st and 2d pullet.
BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.
BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.

BOSTON, 1905. We won every important prize. 1st and 2d cock, 1st, 2d, 3d cockerels, 1st, 2d and 4th hen, 1st, 2d, 3d and 5th pullets; \$100 champion challenge cup for best male; American Houdan Club Cup for best cock, hen, cockerel and pullet. All shape and color ribbons; gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.

ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdans of Toronto. Also highest honors at Madison Square Garden, Philadelphia, Pan-American Hagerstown, Toronto. No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Photographs on application. Eggs in season.

Do You Want to MAKE AN INCUBATOR?

Then we can help you. Our new catalogue of Incubator Plans and Fixtures contains a complete series of drawings and half-tone engravings, showing each step in the construction of an "up-to-date" Hot Water Incubator. The illustrations are accompanied by directions covering every detail of construction, from nailing together the first two boards to adjusting the regulator on the finished machine; and these directions are so plain and simple that any one who can handle a hammer, saw and plane, can make his own incubator.

Send us your address and get the Plans by return mail—FREE.

STANDARD POULTRY ACCOUNT BOOK

IS DEDICATED TO BUSY POULTRYMEN THROUGHOUT THE COUNTRY and is designed especially to make easy and enjoyable the correct keeping of accounts by the day, month and year of all expenses and income pertaining to the Poultry business.

The STANDARD POULTRY ACCOUNT BOOK is the best and most practical account book ever devised for the poultry man. This book has been arranged with a view of obtaining thorough satisfaction with the least possible labor. It is just exactly what poultrymen want.

The system is so simple a child might have entire charge of the book and keep the accounts correctly, and yet, it is so complete as to enable the user to know just what money has been expended and for what purpose; the monies received and from what source, and cash balance on hand and in bank.

It analyzes your expenditures and receipts in a way as complete and thorough as would be required by a large business house. Requires no more time than any ordinary cash account.

The book is arranged to contain the complete records of expenditures and receipts for 12 months (beginning with any month) with Recapitulation, Inventory and Balance Sheets to close up the year's business.

Contains 32 pages, 7¼x10 inches, neatly printed in blank form on best quality linen ledger paper, regular blank book ruling, and is bound in a neat, durable binding.

Send for a copy of this valuable book and begin to keep your accounts in a systematic, orderly manner—the correct way. Whether you keep poultry for pleasure or for profit this book will help you to conduct your business on a more intelligent basis. You'll be pleased with it. Price 50 cents, postage prepaid.

The above book and AMERICAN POULTRY JOURNAL one year, both for 75 cents.

System in Poultry Practice

BY JAMES SHACKLETON.

30 Chapters, 147 Pages, One Dollar, Postpaid.

In 17 days just elapsed I have received orders for 87 copies of this book from California; chiefly because many Californians bought the book a year ago, have tested it in their own experience, and told others of its value. Not the least bit like any other poultry book, but many people say it is better for that. New circular that convinces, for a stamp. A chapter of book postpaid for ten cents. The book and American Poultry Journal for one year for \$1.10, new or renewal.

JAMES SHACKLETON,**Box A 12, Milburn, New Jersey**

A Remarkable Book About

Incubators

The man who perfected the Racine Incubator is the oldest man in the business. He has spent 23 years on nothing but incubators. Since 1881 he has been constantly testing ideas of his own and others. He has conducted a hatchery, and has made hundreds of tests with different incubators in actual use there.

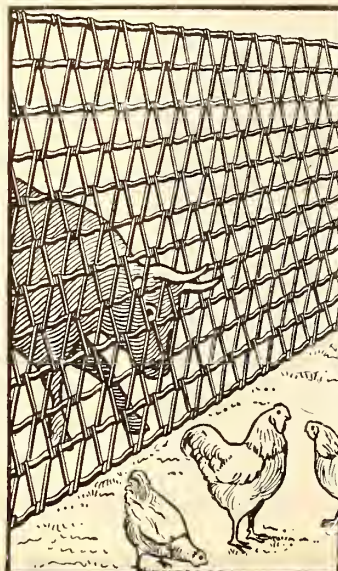

In this way he has learned more than any other man knows about incubators; and he has now put all the facts in a bright readable, interesting book. It tells the secret of success in a fascinating, convincing way. To the man who seeks an incubator, it is by far the best book of the year.

And it tells, too, how the Racine Incubators and Brooders have been developed by a lifetime of patient study. It shows the Racines as they are to-day. You will want this man's machine when you read his book. The book is free—write today for it. Remember that We Prepay the Freight to any point in the U. S.

Coiled Spring Fence

STRONGEST AND BEST FENCE MADE.

It is made so good that all requirements of the farm are fully met. So closely woven the small pig cannot "wriggle" through. So strong the Bull cannot "faze" it. So heavily galvanized the elements cannot rust or corrode it. So durable that it is the last to yield to the ravages of Father Time. Sold on such liberal terms that a

THIRTY DAYS FREE TRIAL

Is given each customer that he may be sure he is satisfied and his money is returned to him if he is not.

Buy Direct. It saves the profit of the middleman. Our Guarantee is all that any manufacturer can give, and infinitely more than the dealer can grant. When you deal with us you **get your money back** if you are not pleased, besides it means a great saving because we sell to you at

WHOLESALE PRICES AND PREPAY THE FREIGHT.

We use nothing but **High Carbon Spring Steel Wire**, and make it ourselves that we may be sure it is good. We coil it that it may provide for **Contraction and Expansion**. We **Heavily Galvanize** it with **Commercially Pure Spelter**, to avoid rust and corrosion in all climates.

Our long experience has made us masters of fence construction and we are able to tell why we make the **strongest and best fence** on the market. We have a 40-page Catalog which fully describes and illustrates every style of our **High Carbon Coiled Spring Farm Fence**, which we will gladly mail to you upon request. Write for it. Address,

COILED SPRING FENCE COMPANY

Box 82, WINCHESTER, INDIANA.

MRS. HILL'S WHITE LANGSHANS Barred Rocks

won more premiums at World's Fair, St. Louis, Mo., than all the other White Langshan breeders combined. This winning at the world's greatest poultry show entitles my birds to the title of "The World's Best." I can supply you with eggs from my best at \$3 per 15 straight. Have three choice cock birds for sale and a few fine cockerels that I will give you a bargain in if ordered at once.

Mrs. J. S. HILL - - - - - Purdin, Missouri

Build Both Machines Yourself

If you expect to succeed in the poultry business you must have good incubators and brooders. Why be content with anything less than **the best?**

New Idea Incubators and Brooders

are the best because you build them from materials of your own selection and know the work is well done because you do it yourself and you

Save More Than
Half The Cost.

Our New Book "How to Make and Save Money with Incubators and Brooders,"

tells the whole story. It will explain how the saving is effected by building your own incubator. This is possible for any man, boy or woman. Thousands have done so and not a single failure.

We furnish plans carefully and exactly worked out showing just what to make and how to put everything together. There is lots of satisfaction in making things "that work." We sell you the parts you could not make, viz., Tank, Heater, Lamp, Regulator, Trays, etc. and guarantee that no incubator, no matter what its price, is better equipped than yours will be, nor will any machine hatch better.

These Are Facts! The man who makes money is the man who saves money. Start right by saving on the cost of your machines.

You need a Brooder. It does for the chick what the incubator does for the egg. Start right by building a Brooder as well as an incubator. By our method both won't cost you as much as an ordinary factory-made incubator much inferior to the New Idea.

Get The Book. It tells in a clear, straightforward, convincing way how the New Idea originated. "Why Factory-Made Machines are Expensive," shows photo views of machines and parts; "A Business Proposition;" "Give Your Boy a Chance;" "How to Get a Machine Free;" "How to Run an Incubator;" "How to Manage the Brooder," etc.; many valuable suggestions for the experienced as well as beginners. Write for the Book today. It's Free. Address

Ten cockerels scoring \$9 to \$12, \$2 to \$5 while they last. Eggs from five yards, scoring 90 to 93½, \$1.50 per 13; \$4 per 50, \$7 per 100. My motto, **Honest Treatment at Living Prices.**

J. N. YOUNG, GOLDEN RULE FARM, R. F. D. 2, HENRY, ILL.

HIGH BRED STOCK AND EGGS

Send orders where you get eggs fresh and stock true to name; where your interests will be personally attended to by men long-experienced in breeding winning strains and good layers. The

GREAT AMERICAN POULTRY FARM

has built its reputation on the high quality of its eggs and breeding birds. Whatever breed you need—send to us. You can rely on us. Everything true to label. All living stock guaranteed healthy, free from vermin. Send for our big, free illustrated catalog.

Great American Poultry Farm
Box 10 Brodhead, Wis.

WELL STARTED HALF RAISED

Your profits will be about double if you raise all your chicks. The first few weeks is the danger time. Little chicks die by hundreds. It's bowel trouble or "sleepy disease," gapes or something else. Half the poultry raisers lose over 50 per cent of the chicks they hatch. But the other half don't. Why the difference? Simply because the latter know the new, weak, unused stomachs of little chicks require a special food. Ninety per cent of all chick deaths are directly traceable to ill adapted food. Well posted poultry raisers know this. This accounts for the small death losses and uniform success of users of

Darling's Chick Feed.

It is an adapted food, scientifically prepared to meet chick requirements. Chicks digest and assimilate it. It is made after Nature's plan, and so prevents **chick diseases**. Our Chick Feed contains the seeds, grains and meats which Nature supplies. They are not thrown together, but are correctly proportioned and balanced. Chicks fed on it begin to grow from the first. By its use they develop quickly and have a good, strong framework. They mature early and begin laying much sooner than those fed in the usual manner. Without exception our Chick Feed is the highest grade, consequently the cheapest on the market.

SAVE YOUR CHICKS.

Stop the frightful losses by feeding right. Use Darling's Chick Feed. You can't afford to be without it. Order a sack and note results. They will surprise you. Price \$2.50 per 100 lb. bag, F. O. B. Chicago. Terms, cash with order.

Remember, in addition to the above we manufacture Beef Meal, Granulated Bone, Beef Scraps, etc. Our location, at the great Chicago Stock Yards, gives us a decided advantage over other poultry food makers. We are right at the center of supply. Every necessary ingredient is at hand—all grains and meat products. Quality is made the key note of all our goods.

Our catalogue shows a full line of poultry foods and supplies. Send for it, and also for our special poultryman's booklet, "Fill the Egg Basket." Both are mailed upon request.

DARLING & COMPANY, Dep't C, Union Stock Yards, Chicago, Ill.

Beef Scraps \$2.25, Granulated Bone \$2.00, Raw Bone Meal \$2.00, Concentrated Meal \$1.80, Scratching Food \$2.00, Oyster Shells 60c, Mica Crystal Grit 65c, Crockery Grit 60c, Beef Meal \$1.80, per 100 lb. bag, respectively, F. O. B. Chicago.

Wiebke's Single Comb Brown Leghorns

Madison Square Garden, Jan., 1905, cock 1st, pullet 3d. Winners of 30 firsts at Chicago, Indianapolis, Cleveland, Ft. Wayne.

BIG SUCCESS WITH HOGS.

SOME farmers are more successful with hogs than others. The man that only gets 8 lbs. of pork out of a bushel of corn fed to hogs makes only half as much as the man that gets 17 lbs.

The American Swineherd is a specialist and the best authority on the hog industry.

Prof. Henry says that success is only obtained by concentrating all efforts upon one line.

A two-years' course in Hog Raising:

Teaching how to be successful.

How to secure the greatest profits.

How to get 17 lbs. of pork out of a bushel of corn and 19 lbs. from a bushel of wheat-fed hogs.

How to feed to double the growth and gain over usual methods; only healthy hogs profitable.

How to keep your hogs healthy.

How to utilize, without other expense than the subscription to this paper, the costly experience and gathered wisdom of the most capable and successful feeders.

Prof. Kennedy of the Iowa Agricultural College says "Your paper is a leader in its line on feeding."

Every owner of hogs should take advantage of this special offer:

Send us \$1 for two years' subscription to the American Swineherd and it will entitle you to a free copy of the Hand Book on "Hog Hygiene," with trade secrets, recipes, valuable information, etc. If the offer is accepted in ten days we will send you in addition the wonderfully suggestive picture in colors, "Uninvited Guests," suitable for framing, showing the pigs partaking of a meal uninvited.

This equips you for a successful hog business.

The Victor Book Tells

How to Make Money in the poultry business. How to have laying hens when eggs are dear. How to get broilers on the market while prices are up. How to raise the heaviest fowls. Hundreds of hints and helps that will make it valuable in any poultryman's library. A well-known authority says the article on the development of the chick in the shell is the finest treatise on the subject ever written. The practical experiments our experts describe show the lines on which the most successful work can be done.

Our machines are not experiments. They are the product of science, long experience and 37 years' continuous operation of the same plant. Victor incubators will not warp, twist or crack from the effect of green lumber. That we are now using has been in our yards over two years. You get full fourteen ounce copper in the tanks and boilers. We build for service and our machines are in use year after year.

The Story of Victor Incubators from the rough lumber to the finished machine; all the points in design, construction and operation which make it the perfected machine. It gives you the reasons why it is best for you to buy a Victor. We tell you just what you would learn if you came to our factory and saw us build the machine—just what you would be told by those who are using our machines. We have not made a single statement in the book which is not backed up by the actual facts. We would not dare to do otherwise, because with every machine we sell goes our bond to take it back and refund the money if it is not in every way up to our description.

When you get a Victor you get Incubator Satisfaction. Anybody in Quincy or who has ever bought from us will tell you you are safe in dealing with us. Victor Incubators and Brooders were used exclusively by the Model Poultry Farm at the St. Louis World's Fair and we have a little leaflet about their experience which we will send you with the Victor Book.

Best Offer and Best Fence

We are making to farmers the best and most liberal offer ever made on high grade fence. We will state our offer here in plain words and leave you to be the judge.

First—The Price we make the farmer on Advance Fence is the lowest and most satisfactory, because it includes freight to your station. There is no guess work or disappointment about the price, no large freight bill to pay, no extras. We quote you a laid down price at your station—and that's the price. We have saved others as much as 15 cents a rod. Get our price and figure out how much we can save you.

Second—We allow 30 Days' REE TRIAL on Advance Fence. Put the fence up when it arrives, and give it any test you wish. Climb over it. Let the stock run against it. Do this thirty days. Then if it disappoints you in any way, return it, and we will refund your money and pay freight back.

Third—We Ship Direct From Factory to You. No jobber or dealer to make a profit out of you. We were the very first fence makers to sell direct to the user. This economical method of marketing enables us to save our customers thousands of dollars.

Fourth—We Offer You 23 Styles of Fence to choose from. This enables you to make a wise selection. The largest dealer carries no such line of sizes and styles. Don't buy what you don't want just because a dealer wants to sell it to you. We fit you out perfectly, for hogs, poultry, stock, garden or field.

Advance Fence

is scientifically constructed of best galvanized steel wire. The top and bottom selvage are double strength. The stay wire is continuous, being twisted with the selvage from one stay to the next and wrapped twice around each line wire as it passes across the fence. The slight crimp at the intersection of the stay with the strand wire prevents the stay from slipping, and also provides for expansion and contraction. There are no loose ends, as in fences with cut stay wires. Advance Fence is the superior fence, without regard to price. You couldn't buy a better made fence though you paid more money.

Get our free Fence Book and study fence construction. You will be a better judge of fence after reading it.

Advance Fence Co., 1346 Old St., Peoria, Ill.

Successful Incubators

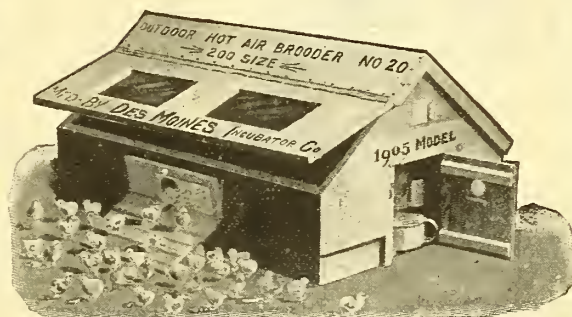

It is your privilege and right to insist on having the best incubator made. There is a vast difference in the working of incubators and the results they give you. The best means the incubator that gives you every time the most and the strongest, most vigorous chicks at least expense and with least trouble and attention. That's the record of **Successful Incubators.** I ask you to read my personal guarantee at the close of this ad. It is because I know the automatic character, the working genius and actual results produced by Successful Incubators that I, as president of the Des Moines Incubator Co., am able to put both my fortune and reputation behind them.

**Successful make any man prosper
in the poultry business.**

**They are the Leading Hatchers
of the World.**

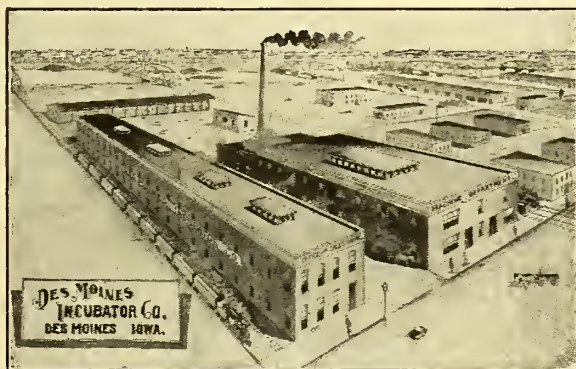

Successful Brooders

in heat regulation, air supply, method of ventilating and in light, come as near to perfection as skill and a thorough knowledge of chick raising can make them. Don't underestimate brooder importance. Our brooders are fit companions for our incubators. The way we have worked out the problem makes you sure of raising more chicks, winter and summer, than by any other means. No waste heat, no strangling of chicks with gases and fumes, little chick homes only second in comfort to the mother's wings and far more secure. A full line, many sizes, for indoor and out door use.

Our Factory and Facilities.

It takes the largest incubator factory in the world to supply the greatest incubator demand in the world. We have that factory. The illustration is not a fancy picture; every building shown is in constant use and devoted solely to the one purpose of incubator and brooder manufacture. Modern, specially planned equipment throughout. Skilled mechanics, selected, seasoned materials, patented appliances and improved machinery, enable us to turn out highest grade incubators and brooders for as low or nearly as low a price as you are asked to pay for the "Cheap John" machines found on the market.

Poultry and Poultry Supplies

Don't forget that we are large breeders of standard poultry. We can make you exceptionally low prices on high bred fowls and eggs. We carry a full line of poultry supplies, foods and appliances. It is money saved and money made for you to get acquainted with our 1905 offers. Write us today. Incubator, Poultry and Poultry Supply Catalogue FREE. With poultry paper one year 10 cents.

Des Moines Incubator Co., Department 1, Des Moines, Iowa.

My Guarantee

I, personally, as president of the Des Moines Incubator Co., guarantee our incubators to be built of first class material, in a thoroughly workman-like manner; to be entirely free from defects, to be automatic in operation and to hatch as large a percentage of fertile eggs as any other machine in the world. If any customer is not perfectly satisfied, I earnestly request that he write me, personally, that I may rectify any mistakes.

Geo. Luce, Edington Lane, Wheeling, W. Va.
M. C. Matthews, Upola, Kan.
Paul Wolf, Menno, Wis.
M. E. Welisch, Cary Station, Ills.

Brooders must not be carelessly selected if you would make money raising poultry. Not the largest size for the least money is the cheapest, but the one that raises the most chicks—Ours are central heat. Loss from crowding impossible. Prices, \$3.00 up—think of a 50-capacity incubator and Brooder complete and on 30 Days' Trial for \$7.50

BUCKEYE INCUBATOR CO., Box 2, Springfield, O.

Will Your Incubator Do This?

Will your incubator hatch a setting of eggs with one-half the oil you now use? Will your wick burn 21 days without trimming? Will your regulator control the flame, raise or lower it as required? Will your burner burn without charring wick, overheating, causing liability to fire? Will your machine save half the time, half the labor, half the cost of operation? Put on this outfit and it will do even more. It will make your old machine do better than it ever could do, besides save you many dollars and much annoyance. Its combined damper and flame regulation alone saves half the oil. Its burner saves danger from fire—can't overheat. Its wick saves trimming—never needs it. Its regulator controls both flame and damper (see cut); this avoids too high or too low a flame.

saves seventy-five per cent. of gas.

ACME AUTOMATIC LAMP AND COMPOUND REGULATOR

make hatching or rearing both pleasurable and profitable Sold separately or together. Fit any machine; any one can attach them. Send for catalog giving detailed description and our full line of fixtures, including illustrated plans for building the famous Peerless Incubators and Brooders. Nearly 100 photographic views showing step by step every stage of incubator construction. It's free. Our new gas regulating burner for incubators

H. M. SHEER CO., BOX 104, QUINCY, ILL.

Something to Think About Before You Buy an Incubator

It is a fact that a large percentage of persons who buy incubators are **not** satisfied with their purchase.

Because a large percentage of the incubators sold do **not** do satisfactory work. They do **not** work satisfactorily because they are built purely on theoretical lines—nine times out of ten the manufacturer who makes them hardly knows a hen from a goose. How can you expect a purely theoretical workman to build a practical machine?

Now, I do not claim to be the only man in the business who knows anything about incubation, but I do claim that in the past 20 years I have experimented with more machines and hatched more chicks on my **Millhook Poultry Farm** than any other manufacturer, and so have gained a wide range of hatching experience. As a result of my experience I found this: **I had to build an incubator myself, after my own plans, in order to get one that would give satisfactory results.** I have that sort of a machine in my line of

IDEAL

Incubators and Brooders.

These are now in the hands of thousands of poultry raisers the world over, and are giving better satisfaction, producing better results, costing less money to operate and causing less trouble than any other incubator or brooder ever built. The simple explanation is that

(1)—They are built on a better plan. (2)—They are more carefully built and more rigidly inspected. (3)—They are **built by a man who knows** from 20 years experience on the largest pure-bred poultry farm in the world, exactly what is needed to produce vigorous, healthy chicks at the least expense.

I do not want to criticise the methods of other manufacturers, nor to belittle their machines, but I do say that every reader of the **American Poultry Journal** will find it to his advantage to send to-day for our great book, "Poultry for Profit," and to investigate

OUR FREE TRIAL OFFER.

We will ship you an Ideal Incubator or Brooder, any size, on 30 days free trial. If you do not find it entirely satisfactory in every way, return it at our expense.

We Pay All Freight Charges

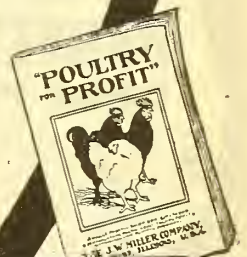

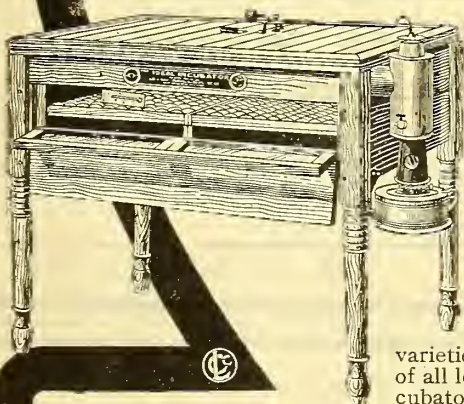

If we did not believe the Ideal to be the most practical and most satisfactory incubator ever built, we could not make this offer.

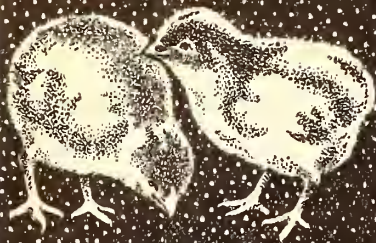

Send For This Free Book.

"Poultry for Profit," 112 pages, handsomely illustrated; 24 full page pictures of leading varieties of fowls, drawn from life; full description of all leading breeds; 18 years experience in use of incubators; selection of breeding stock; the best incubator to buy; how to feed fowls of all ages; cures for poultry diseases; poultry

questions answered, together with descriptions of the **Millhook Poultry Farm** and of the best and most profitable poultry supplies, appliances, remedies and aids to money-making. The book cost us \$5,000; it's free to you. As a sensible poultry raiser who wants to make the most money possible from your fowls can you afford to neglect to investigate what we offer? Send today for our proposition.

J. W. Miller Company, Box 56, Freeport, Ill.

Little Chicks

just out of the shell need especial care. Their delicate little organs cannot stand the sorts of foods that older fowls thrive on.

HARVEY'S CHICK FOOD

is an ideal food for chicks just hatched. Contains in proper proportion all the elements a chick food should. Feed it dry, it regulates the bowels, promotes health and produces strong, vigorous birds. Starts chicks to growing from the first feed and keeps them at it.

Ground Raw Bone is indispensable to all kinds of young stock—especially young turkeys—it prevents leg weakness.

HARVEY'S GROUND RAW BONE

gives young chicks and turkeys a good start in life—they grow and develop strength and vigor at a lively rate when raw bone is freely and intelligently fed. If you have never tried it, it will pay you to give it a thorough test.

Little chicks hatched in incubators are subject to many ills the first days of their lives. The loss from weakness or "breaking down" is enormous. Feed nothing but

HARVEY'S CHICK FOOD

until the chicks are old enough to be put upon the regular ration fed to the older fowls. They will develop rapidly, grow robust and healthy, the loss will be small and your incubators will pay as never before. Try it this season and see. Next season you'll feed lots of it and save all your chicks

Our complete catalog of pigeon and poultry supplies ought to be in the hands of every poultry-raiser—it's full of valuable help. Free on application. Write for it today.

800 WYANDOTTES and SEBRIGHTS 800

We have about 800 head of very fine Golden, Silver Laced and White Wyandottes and Golden and Silver Sebrights yet to spare at very reasonable prices. Our birds have won more than 300 premiums at Madison Square Garden show since 1891. In 1903 we won first on breeding pen of both GOLDEN and WHITE. They have won at all the big shows for the past 18 years. If you wish to buy fine line-bred birds from utility stock and exhibition quality combined, we breed that kind. Eggs from our fine matings \$3 and \$5 per setting. Our large circular is free and tells all about our birds. ALSO FINE BELGIAN HARES CHEAP.

IRA C. KELLER,

BROOK SIDE FARM, Box 75, Prospect, Ohio

Pure Bred White Wyandottes

I have carefully selected four pens of my very best WHITE WYANDOTTE hens and pullets, of good size, shape and excellent laying qualities, mated with fine cockerels of grand shape, pure white plumage, superb carriage, and fine Wyandotte points. These birds are young, vigorous stock and will produce first-class chicks. I will sell eggs from these choice matings at \$1.00 per sitting of 15. Satisfaction guaranteed.

MRS. T. F. LEONARD,

Box 94, Mt. Sterling, Ohio.

King Breeds some of the BEST BARRED ROCKS

in the country. Why? Because he is a specialist and caters to the fancy trade, breeds his winners and furnishes winners to his customers in strongest competition. Send for new mating circular for prices on eggs and description of breeding stock. Correspondence carefully and promptly answered. Write to-day.

O. L. KING,

Lock Box 4, Walnut Grove, Ill.

You Get \$300 For \$5

Four World's Fair Winners, Bred and Owned by U. R. Fishel.

That is what the customer got who wrote the following letter: "Streator, Ill., Jan. 17, 1905. I would not take \$300 for the twelve chicks I reared from the setting of eggs I bought of you last spring. * * * " Why ponder over the matter where to place your order for eggs for hatching. My matings this season are so far ahead of any previous season, that really I feel as if every egg should produce a winner.

When You Buy Eggs For Hatching

why not get the best? No haphazard matings in my yards, I have for years bred my winners and win with my breeders. My last winnings at the GREAT ST. LOUIS WORLD'S FAIR, where the Fishel White Rocks won seventeen prizes, surely convinces you of the quality. They tried hard to wrestle the title of "The Best in the World"

From The Fishel White Rocks

but it was too large an undertaking and one of the impossibilities. Have you seen a copy of my NEW 48-PAGE CATALOGUE? It is the finest poultry catalogue ever issued. Send three two cent stamps for a copy. I have something over TWO THOUSAND SELECT BREEDERS TO SELL, the cream of six thousand. It will pay you to get my prices.

MODEL Incubators GROW IN POPULARITY Because they Hatch Chicks Successfully

A new thermostat this season makes it the easiest regulated of all incubators.

The large market Breeders endorse this thermostat as follows: Truslow—"The new thermostat is a wonder." McFetridge—"The best acting thermostat I have yet tried." The Meadow Brook Farm—"Your new thermostat is more sensitive than any other tried, and will prove a labor saver." McEvoy—"No breeder can afford to run an incubator without this regulator." Evergreen Poultry Farm—"Very sensitive, and the largest possible scope of action." To induce a breeder who has a large investment in incubators to change from one machine to another, an incubator must be head and shoulders above its competitors in point of efficiency. The Model is so good that the following large plants have adopted it, discarding other machines: Crystal Springs Duck Farm, Oil City, Pa., formerly 56 Cyphers, now 81 Models; Wm. H. Truslow, Stroudsburg, Pa., formerly 45 Cyphers, now 50 Models; Pine Tree Chicken Hatchery, Stockton, N. J., formerly 47 Cyphers, now 72 Models; W. H. McCormick & Son, Yardley, Pa., formerly 67 Cyphers, now 67 Models; Farrar Bros., Assinippi, Mass., large soft roaster growers, and many other smaller plants have changed over.

Lakewood Farm Company Inc.

One of the latest to change over is the Lakewood Farm Company at Lakewood, N.J. This is one of the largest White Leghorn egg farms in this country, breeding a prolific strain of layers, and producing stock and eggs for breeding and hatching, as well as catering to a high class egg trade. Formerly the Cyphers was used exclusively, and Mr. Brown, the President of the Company, was loath to give the Model a trial. A fair trial, however, and nothing but the Model will answer for this money-making plant.

MODEL Brooders

GROW IN POPULARITY

Because They Rear Chicks Successfully

Perfected this season in point of detail, they have no equal at any price

To do the work successfully a brooder must be warmly constructed and heated in such a manner that there are no hot spots for the chicks to crowd against, such as a warm central dome or otherwise exposed heating surface. The air in the nursery as well as under the hover must be kept comfortably warm to keep the chicks from crowding.

The ventilation must be ample, and introduced in such a way that there is no draught on the chickens. A strong circulation of air is detrimental, in so much that it requires a much higher degree of heat to keep the chicks comfortable when the air is perceptibly moving. It must be well lighted, as nothing keeps a brooder so free from disease germs as light. In a dark, close, stuffy brooder chicks soon develop tuberculosis, familiarly known among poultrymen as "going light," one of the greatest causes of mortality among brooder chicks.

It must be roomy, as otherwise the chicks cannot properly exercise. It must be easy to clean and care for, as otherwise the attendant will neglect it. All these important features are found in the Model Colony Brooders as they are found in no other.

In this brooder the nursery is double-walled, insuring easy heating. The roof is covered with a layer of hair felt, making it sun proof; and tinned, making it water tight. It is ventilated by diffusion, the warm air passing gently downward through a burlap screen in the top of the hover. No perceptible air movement is felt by the chicks. The hover and nursery are amply large, and the exercising room is moderately warmed and very roomy, and the whole brooder is light and cheerful and easy to care for. This brooder has won more friends in one short season than any other brooder on the market, because it is easy to raise chicks in it.

The Following are Fair Average Reports on this Brooder

We used one of your Model Colony Brooders last season, and we found it very satisfactory in every respect. I think I would be safe in stating that it is the best brooder that we have ever used. It is not very often that we make a statement of this nature, but of the the brooders used so far, considering the health of the chickens and the amount of oil used, I think yours is superior to anything I have used to date.

Yours very truly,

W. R. GRAHAM.

Manager and Lecturer, Poultry Department, Ontario Agricultural College, Guelph, Canada.

I am using 14 Model Colony Brooders, and they are simply perfection for outdoor work. I feel justified in saying that they will raise every chick committed to their care that can be made to live in any manner.

Yours truly,

W. H. HARDIN.

Supt. Valle Crucis Farm, Valle Crucis, N. C.

I wish to say that I used three of your Model Colony Brooders last season, and I have no hesitancy in saying that they are the best outdoor brooders that I ever put a chicken in. I take pleasure in recommending it, not to aid the manufacturer, but to aid and benefit those who want a practical brooder.

Very truly yours,

FRANK W. GAYLOR.

Manager Gedney Farm, White Plains, N. Y.

I must say the Model Colony Brooders are just simply immense. They are the best we have ever used, and we have been using brooders for 25 years.

Very truly yours,

Hope, Ind.

J. C. FISHEL & SON.

I think you have the right idea in a brooder. It does its work to my entire satisfaction. Have run one through three broods only losing one chick.

PARLOR POULTRY YARDS

F. C. TABOR, Prop., Worcester, N. Y.

High in the Opinion

of every user, stands the Ohio Incubator. Justly, too. It isn't hard to attend to—doesn't get "freaky." The lamp gives off no poisonous fumes—the ventilation doesn't dry the eggs up. Every part of the

OHIO INCUBATOR

is planned and built to answer every demand for an artificial hatcher that won't disappoint. It hatches a high per cent of fertile eggs because of its peculiar, successful diffusion of warm air similar to the flesh-heat radiated by the hen. It's for your profit—if you're after dollars—to write now for our illustrated catalogue. It's free, Ohio Incubator and Brooder Co., Box 12 Columbus, O.

BILL THOMPSON'S INCUBATORS

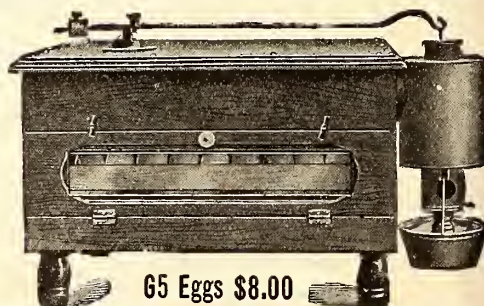

He calls it THE BUSY BEE. It's the most successful small hatcher sold at a small price ever placed on the market. The walls are double and packed with non-conductor. It is the only small incubator made in this manner. All others are cheap single wall machines. It is self-regulating, needs no moisture, safe and durable. Warranted to hatch equal to high priced ones. Just right for the small breeder and fancier. It's not a toy. Holds 65 eggs, price only \$8.00.

\$5 Busy Bee Brooder the only portable brooder that lets the chicks run out directly on the ground, no legs, no platform, no climbing for the chicks. Don't buy a brooder on legs or that must have a platform. Too much loss and trouble with them. Runs out or in doors. They are the best and cheapest on earth. Price, 100 chick size, \$5. Catalogue free.

We Have Discovered The Secret

Sunflower Seed Will Make Hens Lay In Winter

It has been our good fortune to discover the secret. Nature, in her infinite wisdom, provided a plant, the seed of which will increase egg production and will assist poultry through the molting period. This plant is none other than the old-fashioned Sunflower that occupied such a cherished spot in our grandmother's garden. It is easily grown and will yield a good crop anywhere. The

American Giant Sunflower

which we have grown for years and have perfected to a high degree, with proper cultivation produces mammoth heads measuring from 2½ to 4 feet in circumference, weighing from 5 to 10 pounds each, and grows 3,300 strong, healthy plants to the acre.

Sunflower Seed is a natural feed for fowls—takes the place of "dope" mixtures. When properly fed brings birds through the molting season in one-half the usual time, with better plumage and better health than by feeding linseed meal, cottonseed meal, or any of the numerous "doctored" preparations offered for this purpose. It is nature's provision, works in nature's way, and produces natural results.

Last year we supplied seed to poultry raisers in every state in the Union and many in Canada. Results were so satisfactory the indications now are that we will have to hustle to fill orders for next season. However, we had a splendid crop and delight in hustling, so send in your orders early and be ready to plant an acre or more. Give it a thorough test, it will greatly increase your poultry profits.

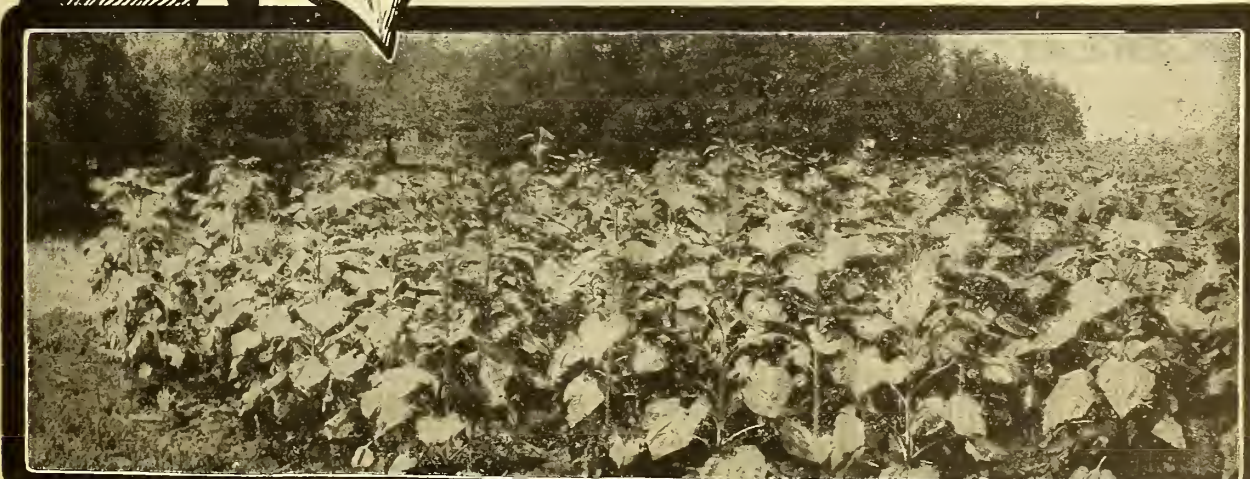

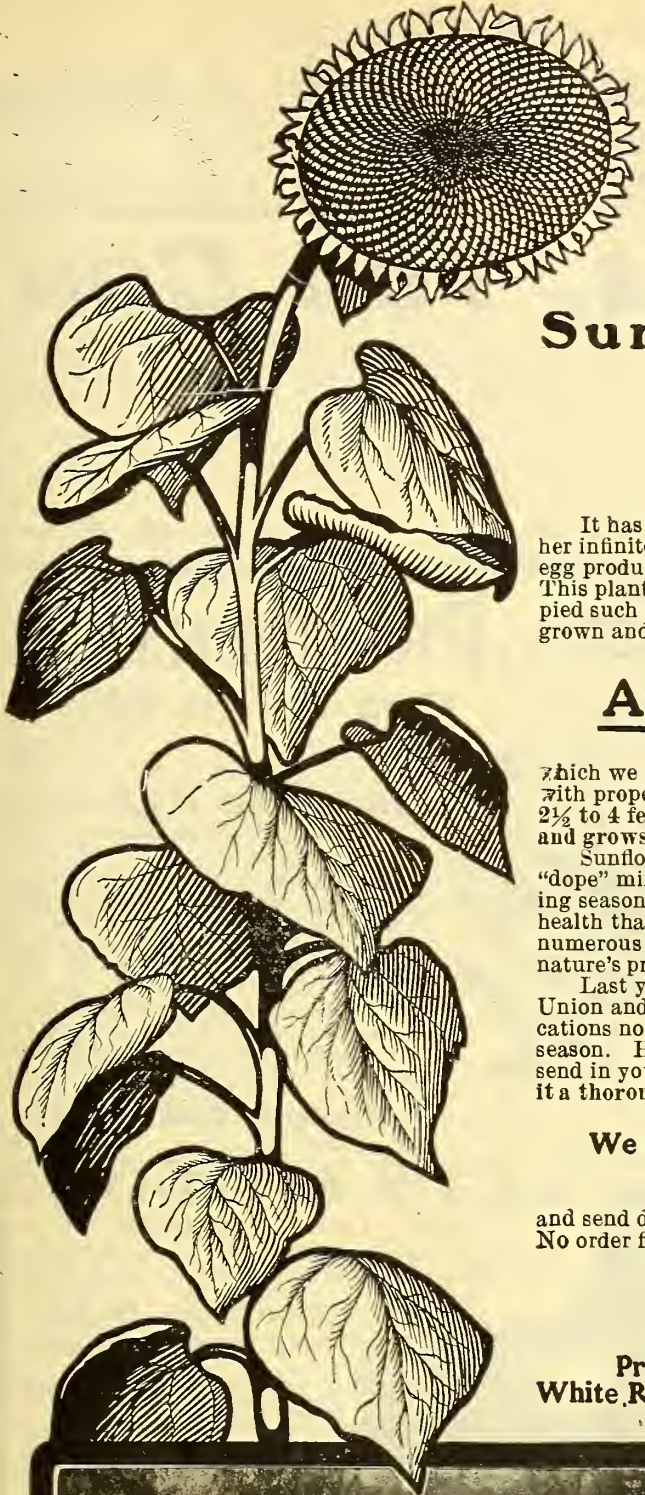

**We Send Enough to Plant an Acre, Express
Paid, For 50 Cents**

and send directions how to plant, grow and harvest, with each order. No order filled for less than 50 cents. Address all orders to

FOR SALE. Breeding and exhibition stock.

D. T. HEIMLICH,

Jacksonville, Ill.

Yes, You Can

get eggs from the pen headed by that wonderful 1st prize **BUFF WYANDOTTE** cockerel at the January Chicago show. Experts claim that he is the best Buff Wyandotte male ever exhibited in America. Read what the February poultry papers say about him. Remember that I raised good Buff Wyandottes ten years ago, and I will be raising them ten years hence. It is easy enough to win once, but takes years of the hardest work to get permanent results. I have won more firsts than my combined competition during the last five years.

I have got **BUFF ROCKS**, good ones, the entire flock of one of the most careful and successful breeders in America.

INDIAN RUNNER DUCKS. Did you ever eat one? Did you know that they would lay more eggs than the average hen? Investigate them. They are the **ginseng** of the poultry yard. Send for my circular, it tells all about it.

W. R. WOODEN

Battle Creek, Mich.

WINNERS OF THE PRESIDENT'S CUP NEW YORK 1904**Columbian Wyandottes**

Are destined to be the most popular of American varieties. Lay large eggs and lots of them, breed true and are an ideal table fowl. At St. Louis we won 1st and 3d cocks, 1st, 2d and 3d hens, 1st, 2d and 3d cks., 2d, 3d and 5th pullets.

Our Rose and Single Comb Reds are second to none. At New York, 1904, three 1sts and one 3d on four entries. Eggs and stock for sale. Send for circulars.

Hazelmere Poultry Yards

Knightsville,

Cranston, R. I.

LET'S SIT DOWN AND TALK IT OVER

Are you going to buy an Incubator? You want the best for the lowest cost. I want you to know about our

New Idea Incubators and Brooders

If I could sit down with you, take one of our machines apart and show it to you, piece by piece, I would have no trouble in interesting you. No machine on the market deserves your confidence more than the **New Idea**. THEN when I told you that you could get it for less than **ONE-HALF THE COST** of other machines and showed you just how this saving is made I would be sure of your order.

This is the spirit in which we have written Our New Book, "How to Make and Save Money with Incubators and Brooders." It is a face-

to-face talk on the subject because we cannot in any other way meet and talk to the thousands who want to know about the **New Idea**. BUILD YOUR OWN INCUBATOR; that's the secret of saving half, and you can do it just as successfully as thousands of other men, boys and women have done since we first began telling how it could be done. Read what this man says:

Channon, Snow & Co., Quincy, Ill.—Dear Sirs: I told you I would report my success with your incubator and brooder. I never thought they could be built so cheap. I have 174 White Leghorn chickens from 180 fertile eggs and they are all doing well. I have had quite a few friends watching the results of your machine, and I have now five incubators and brooders sold for next season. F. GEO. FARLINGER, Detroit, Mich.

The Book Tells about the Plans for Building Incubators and Brooders so clear and simple and complete that you can't possibly go astray. Besides we furnish you the parts you cannot make like Tank, Heater, Lamp, Regulator, etc. and we guarantee that no factory-made Machines have better fixtures than yours. Everything we furnish is of the very best. You need a brooder too. Our method enables you to get an Incubator and Brooder at less cost than a factory-made Incubator alone. Other features of interest in the book: "Why factory-made Incubators are Expensive," "How to Get Your Incubators Free," "Give the Boy a Chance," "Full Instructions for running Incubators and Brooders," etc. It's full of facts helpful to the experienced and invaluable to the beginner. Get the Book! Write for a copy today and begin planning carefully. Start right! Saving on the cost of your Incubator and Brooder is the best kind of money-making. A postal will bring the Book. It's free. Contains more genuinely New Ideas than any Incubator catalogue of the year.

CHANNON, SNOW & CO., Dept. C, QUINCY, ILLINOIS.

SALZER'S SEEDS

WHEN you sow Sir, you want to reap, not sparingly, but bountifully, that is eternally right. When you sow Salzer's Seeds you are just as sure of reaping a big crop, as you can be of anything in this life, because Salzer's seeds are full of life and vigor and producing qualities. They must yield, drought, rain or elements notwithstanding.

MACARONI WHEAT

Yielded for thousands of farmers in 1904 from 30 to 80 bu. per acre, of as fine a Wheat as the sun ever shone on. Rust proof!

SALZER'S HOME BUILDER CORN.

Positively the highest eared, earliest corn on earth. Yielded in Indiana, 157 bu.; Ohio, 160 bu.; Tennessee, 198 bu.; Michigan, 220 bu.; and South Dakota, 276 bu. per acre. It is really a marvelous corn. Sinks its roots deeply after moisture and nourishment; grows like a weed, producing everywhere record breaking crops.

BILLION DOLLAR GRASS AND TEOSINTE.

Most talked of grass on earth. Yielded 10 and 14 tons of elegant hay per acre, while Teosinte would be ashamed of itself, if it did not produce over 80 tons of rich green food per acre.

SALZER'S NATIONAL OATS.

The Oat marvel, giant in yield and quality, nothing on earth quite like it. It will revolutionize Oat growing. 150 to 300 bu. per acre, if you sow it in 1905.

SPELTZ OR EMMER.

Most marvelous cereal and hay food on earth, producing from 60 to 80 bu. of grain, and 4 tons of hay, as good as Timothy per acre.

ONION SEED 60c A LB.

We are the largest Vegetable Seed growers in America, operate 5000 acres. Our stocks are *unrivalled*. We have \$5000.00 that says there are no earlier Radishes, Peas, Sweet Corn, Cabbage, Cucumbers, Tomatoes, Cauliflower, Potatoes, etc., than those grown from Salzer's Seeds.

FOR 10c AND THIS NOTICE

We will send you a lot of farm seed samples, fully worth \$10.00 to get a start, together with our mammoth 140 paged illustrated catalog. All this we send for but 10 cts. postage.

JOHN A. SALZER SEED CO.
La Crosse, Wis.

GOOD FOODS

Globe Poultry Food

Our Regular Mixture for grown fowls, of Wheat, Corn, Kafir-corn, Buckwheat, Sunflower, etc. A balanced ration suitable for all seasons.

Sun Chick Starter

A specially cleaned and graded Fancy Mixture of Cracked Wheat, Corn, Kafir-corn, Millets, Oatmeal, etc.—adapted to requirements of the Baby Chick up to 20 days old.

Queen Poultry Mash For Winter Feeding

A carefully selected mixture of ground feed, manufactured from the choicest sound, sweet and wholesome grain; contains ingredients in proper proportions essential to the health and growth of the fowl and especially for production of eggs.

Crescent Chick Food

Our Standard Mixture of Cracked Wheat, Corn, Kafir-corn, Millets, Hulled Oats, etc.—a complete food for chicks 3 to 8 weeks old.

THE ORIGIN OF EASTER EGGS

Some Notable Data Collected From Various Sources, By
Rev. C. E. Peterson.

Both fowls and eggs have from times immemorial played a role in the world's history, as we have formerly noted in the pages of the *AMERICAN POULTRY JOURNAL*. And it is at least an interesting enough study to those interested in facts of any kind relating to their fowl pets.

As will be seen from the following collected data on Easter eggs, it seems to have been a matter of great importance to a very many countries and peoples, and a publisher could even be found that was willing to publish at a time when money was worth more than it is today, a whole work on the subject of Easter eggs, adorned with one hundred beautiful engravings of eggs, with devices within them. This book was published in the year 1672, and is very rare. That the custom of the Easter egg is still kept up here and in other countries, shows to what an extent a custom may be rooted and grounded into the life of nations. There is much in this old time honored custom worth appreciating, and we believe that as long as Santa Claus comes to our homes with his great cheer and gifts to put in the childrens' stockings, just as long will he be followed by the cheer of the Easter morn, with its bright good news of a risen Savior, of which it was anciently believed that the Easter egg was a type.

These eggs were blessed by the priests in the following form, "Bless O Lord we beseech thee, this thy creatures of eggs; that it may be a wholesome sustenance to thy faithful servants, eating it in thankfulness to thee on account of the Resurrection of our Lord," etc.

Commonly these eggs were called Pasche, or paste eggs, which was supposed to be derived from *Pascha*, the Passover.

The exchange of Easter eggs is still kept up in Europe, and gifts of fancy colored eggs are annually presented to friends in this country.

The modes adopted in many parts of Europe to prepare these eggs for presentation are the following:

In the north of England it is still the custom to send reciprocal presents of eggs at Easter to the children of families respectively betwixt whom any intimacy exists. The modes adopted to prepare the eggs for presentation are the following: there may be others which have escaped my recollection. The eggs being immersed in hot water for a few moments, the end of a common tallow candle is made use of to inscribe the names of individuals, dates of particular events, etc. The warmth of the egg renders this a very easy process. Thus inscribed, the egg is placed in a pan of hot water, saturated with cochineal or other dye-woods; the part over which the tallow has been passed is impervious to the operation of the dye; and consequently when the egg is removed from the pan, there appears no discoloration of the egg where the inscription has been traced, but the egg presents a white inscription on a colored ground. The color, of course, depends upon the taste of the person who prepared the egg; but usually much variety of color is made use of. Another method of ornamenting "pace eggs" is, however, much neater, although more laborious, than that with the tallow candle. The egg being dyed, it may be decorated in a very pretty manner, by means of a penknife, with which the dye may be scraped off, leaving the design white, on a colored ground. An egg is frequently divided into compartments, which are filled up according to the taste and skill of the designer. Generally one compartment contains the name, and (being young and unsophisticated)

tice as a tombstone of a family Bible. It will be readily supposed that the majority of pace eggs are simply dyed or dotted with tallow to present a piebald or bird's-eye appearance. These are designed for the junior boys, who have not began to participate in the pleasures of "a bended bow and quiver full of arrows," a flaming torch, or a heart and a true lover's knot. These plainer specimens are seldom promoted to the dignity of the ale-glass or the corner-cupboard. Instead of being handed down to posterity, they are hurled to swift destruction. In the process of dyeing they are boiled pretty hard, so as to prevent inconvenience if crushed in the hand or the pocket. But the strength of the shell constitutes the chief glory of a pace egg, whose owner aspires only to the conquest of a rival youth. Holding his egg in his hand, he challenges a companion to give blow for blow. One of the eggs is sure to be broken, and its shattered remains are the spoil of the conqueror, who is instantly invested with the title of "a cock of one, two, three," etc., in proportion as it may have fractured his antagonists' eggs in the conflict. A successful egg in a contest with one which had previously gained honors adds to its number the reckoning of its vanquished foe. An egg which is "a cock" of ten or a dozen, is frequently challenged. A modern pugilist would call this a set-to for the championship. Such on the borders of the Solway Frith were the youthful amusements of Easter Monday.

Hutchinson, in his *History of Northumberland*, ii. 10, speaking of Pasche Eggs, says, "Eggs were held by the Egyptians as a sacred emblem of the renovation of mankind after the Deluge. The Jews adopted it to suit the circumstances of their history, as a type of their departure from the land of Egypt; and it was used in the feast of the Passover as part of the furniture of the table, with the Paschal Lamb. The Christians have certainly used it on this day, as retaining the elements of future life, for an emblem of the Resurrection. It seems as if the egg was thus decorated for a religious trophy, after the days of mortification and abstinence were over, and festivity had taken place; and as an emblem of the resurrection of life, certified to us by the Resurrection from the regions of death and the grave." The ancient Egyptians, if the resurrection of the body had been a tenet of their faith, would perhaps have thought an egg no improper hieroglyphical representation of it. The exclusion of a living creature by incubation, after the vital principle has laid a long while dormant, or seemingly extinct, is a process so truly marvelous, that, if it could be disbelieved, would be thought by some a thing as incredible to the full, as that the Author of Life should be able to reanimate the dead.

A writer in the *Gentleman's Magazine*, July, 1783, p. 578, supposes the egg at Easter "an emblem of the rising up out of the grave, in the same manner as the chick, entombed, as it were, in the egg, is in due time brought to life." Le Brun, in his *Voyages*, i. 191, tells us that the Persians, on the 20th of March, 1704, kept the Festival of the Solar New Year, which he says lasted several days, when they mutually presented each other, among other things, with colored eggs.

Easter, says Gebelin, and the New Year, have been marked by similar distinctions. Among the Persians, the New Year is looked upon as the renewal of all things, and is noted for the triumph of the Sun of Nature, as Easter is with Christians for that of the Sun of Justice, the Savior of the World, over death, by his Resurrection. The Feast of the New Year, he adds, was celebrated at the Vernal Equinox, that is, at a time when the Christians, removing their New Year to the Winter Solstice, kept only the Festival of Easter. Hence, with the latter, the Feast of Eggs has been attached to Easter, so that eggs are no longer made presents of at the New Year.

The Jews, in celebrating their Passover, placed on the table

also the age of the party for whom the egg is intended. In another is perhaps a landscape; and sometimes a cupid is found lurking in a third; so that these "pace eggs" become very useful auxiliaries to the missives of St. Valentine. Nothing is more common in some northern villages than to see a number of these eggs preserved very carefully in the corner-cupboard; each egg being the occupant of a deep long-stemmed ale-glass, through which the inscription could be read without removing it. Probably many of these eggs now remain in Cumberland, which would afford as good evidence of dates in a court of just-two unleavened cakes, and two pieces of the Lamb; to this they added some small fishes, because of the Leviathan; a hard egg, because of the bird Zizz; some meal, because of the Behemoth; these three animals being according to their Rabbinical Doctors, appointed for the feast of the elect in the other life. I saw at the window of a baker's shop in London, on Easter Eve, 1805, a Passover cake, with four eggs, bound in with slips of paste, crossways, in it. I went into the shop and inquired of the baker what it meant; he assured me it was a Pass-over cake for the Jews.

The learned Hyde, in his *Oriental Sports*, tells us of one with eggs among the Christians of Mesopotamia on Easter Day, and forty days afterwards, during which time their children buy themselves as many eggs as they can, and stain them with a red color in memory of the blood of Christ, shed as at the time of his Crucifixion. Some tinge them with green and yellow. Stained eggs are sold all the while in the market. The sport consists in striking their eggs one against another, and the egg that first breaks is won by the owner of the egg that struck it. Immediately another egg is pitted against the sinning egg, and so they go on (as in that barbarous sport of a Welsh main at cockfighting), till the last egg remaining wins all the others, which their respective owners shall have won. This sport, he observes, is not retained in the midland parts of England, but seems to be alluded to in the old proverb, "an egg at Easter," because the liberty to eat eggs begins again at that festival, and thence must have arisen this festive egg-game; for neither the Papists, nor those of the Eastern church, eat eggs during Lent, but at Easter begin again to eat them. And hence the egg-feast formerly at Oxford, when the scholars took leave of that kind of food on the Saturday after Ash Wednesday; on what is called "Cleansing Week."

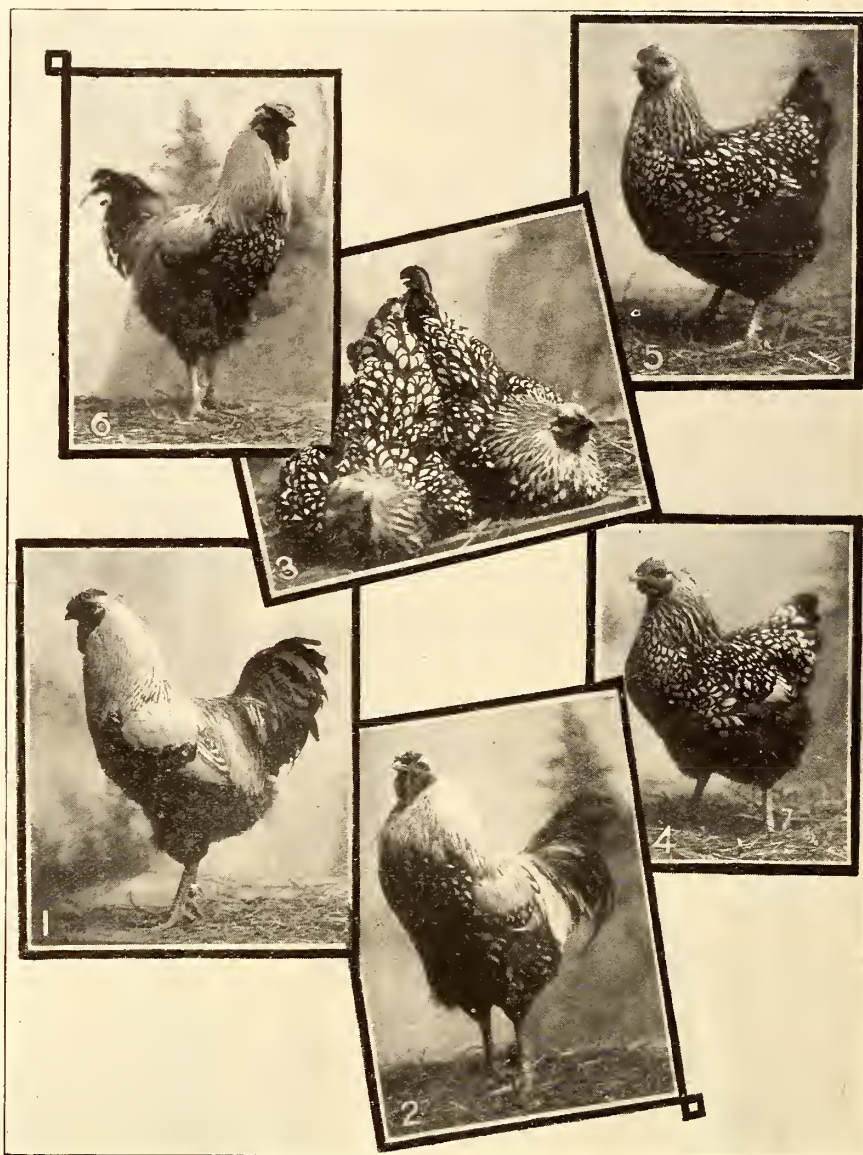

In the *Museum Tridescantianum*, 1660, p. 1, we find, "Easter Eggs of the Patriarchs of Jerusalem."

In the North of England, continues Hyde, in Cumberland and Westmoreland, boys beg on Easter Eve, eggs to play with, and beggars ask for them to eat. These eggs are hardened by boiling, and tinged with the juice of herbs, broom-flowers, etc. The eggs being thus prepared, the boys go out and play with them in the fields, rolling them up and down like bowls upon the ground, or throwing them up, like balls, into the air. Eggs, stained with various colors in boiling, and sometimes covered with leaf-gold, are at Easter presented to children, at Newcastle-upon-Tyne, and other places in the North, where these young gentry ask for their paste eggs, as for a fairing, at this season. Paste is plainly a corruption of Pasque, Easter.

In the neighborhood of Newcastle they are tinged yellow with the blossoms of furze, called their Whin-bloom. A curious tract, 1644, lies before me, entitled, *To Sion's Lovers*, being a golden egg, to avoid infection, a title undoubtedly referring to this superstition. In a curious Roll of the Expenses of the Household of 18 Edw. I., communicated to the Society of Antiquaries, 1805, is the following item in the Accounts of Easter Sunday: "Four hundred and a half of eggs, eighteen pence:"

highly interesting to the investigator of our ancient manners; not so much on account of the smallness of the sum which purchased them, as for the purpose for which so great a quantity was procured on this day in particular: i. e. in order to have them stained in boiling, or covered with leaf gold, and to be afterwards distributed to the Royal Household.

The following, from Emilienne's *Frauds of Romish Monks and Priests*, is much to our purpose: "On Easter Eve and Easter Day, all the head of families send great chargers, full of hard eggs, to the church, to get them blessed, which the priests perform by saying several appointed prayers, and making great signs of the cross over them, and sprinkling them with holy water. The priest, having finished the ceremony, demands how many dozen eggs there be in the bason? These blest eggs have the virtue of sanctifying the entrails of the body, and are to be the first fat or fleshy nourishment they

A GROUP OF JONES' WYANDOTTES, FROM "THE PINES," PADUCAH KY THAT WON AT THE LATE CHICAGO SHOW.

take after the abstinence of Lent. The Italians do not only abstain from flesh during Lent, but also from eggs, cheese, butter, and all white meats. As soon as the eggs are blessed, every one carries his portion home, and causeth a large table to be set in the best room in the house, which they cover with their best linen, all bestrewed with flowers, and place round about a dozen dishes of meat, and the great charger of eggs in the midst. 'Tis a very pleasant sight to see these tables set forth in the houses of great persons, when they expose on side-tables (round about the chamber) all the plate they have in the house, and whatever else they have that is rich and curious, in honor of their Easter eggs, which of themselves yield a very fair show, for the shells of them are all painted

with divers colors and gilt. Sometimes there are no less than twenty dozen in the same charger, neatly laid together in the form of a pyramid. The table continues, in the same posture, covered, all the Easter week, and all those who come to visit them in that time are invited to eat an Easter egg with them, which they must not refuse."

In the Beehive of the Romishe Church, 1579, f. 14, Easter eggs occur in the following list of Romish superstitions: "Fasting Dayes, Years of Grace, Differences and Diversities of Dayes, of Meates, of Clothing, of Candles, Holy Ashes, Holy Pace Eggs and Flanes, Palmes and Palme Boughes, Staves, Fooles Hoods, Shelles and Belles, Paxes, Licking of Rotten Bones," &c. The last article relates to pilgrims and relics. The author of *Le Voyageur A Paris*, ii. 112, supposes that the practice of painting and decorating eggs at Easter, amongst the Catholics, arose from the joy which was occa-

Siberia, is set apart for visiting in Russia. A Russian came into my room, offered me his hand, and gave me, at the same time, an egg. I gave him in return the egg which I had just before received. The men go to each other's houses in the morning, and introduce themselves by saying: "Jesus Christ is risen." The answer is: "Yes, he is risen." The people then embrace, give each other eggs, and drink a great deal of brandy. The subsequent extract from Hakluyt's *Voyages* is of an older date, and shows how little the custom has varied: "They (the Russians) have an order at Easter, which they alwaies observe, and that is this: every yeere, against Easter, to die or color red, with Brazzel (Brazil wood), a great number of eggs, of which every man and woman giveth one unto the priest of the parish upon Easter Day, in the morning. And, moreover, the common people used to carrie in their hands one of these red eggs, not only upon Easter Day, but also

three or four days after, and gentlemen and gentlewomen have eggs gilded, which they carry in like manner. They use it, as they say, for a great love, and in token of the Resurrection, whereof they rejoyce. For when two friends meete during the Easter Holydayes, they come and take one another by the hand; the one of them saith: 'The Lor, or Christ, is risen;' the other answereth, 'It is so of a trueth;' and then they kiss and exchange their eggs, both men and women, continuing in kissing four dayes together." Our ancient voyage-writer means no more here, it should seem, than that the ceremony was kept up for four days. On the modern practice of this custom in Russia we find the following: "On Easter Day they greet one another with a kiss, both men and women, and give a red egg, saying these words, *Christos vos Christe*. In the Easter Week all his Majesty's servants and nobility kiss the patriarch's hand, and receive either gilded or red eggs, the highest sort three, the middle two, and the most inferior one."

In Germany, sometimes, instead of eggs at Easter, an emblematical print is occasionally presented. One of these is preserved in the Printroom of the British Museum. Three hens are presented as upholding a basket, in which are placed three eggs, ornamented with representations illustrative of the Resurrection. Over the centre egg the *Agnus Dei*, with a chalice representing Faith; the other eggs bearing the emblems of Charity and Hope.

All good things are three,
Therefore I present you three Easter eggs,
Faith and Hope, together with Charity.
Never lose from the heart
Faith to the Church; Hope in God
And love him to thy death.

The Pace-Egger's song, as still heard in the North, commences as follows:

"Here's two or three jolly boys, all of one mind,
We have come a pace-egging, and hope you'll prove kind;
I hope you'll prove kind with your eggs and strong beer
And we'll come no more near you until the next year."

A sort of drama appears to form part of the amusements of this day. I possess a tract of this kind, entitled the *Peace Egg*, with woodcuts, which concludes as follows:

"Enter Devil Doubt.
"Here come I, little Devil Doubt,
If you do not give me money,
I'll sweep you all out;
Money I want, and money I crave,
If you do not give me money
I'll sweep you all to the grave."

Much more might be quoted about Easter Eggs but we will forbear, and conclude by relating one more curious instance of a will made by John Troutbeck October 27, 1787, who gave

A GROUP OF NOTED GOLDEN WYANDOTTES FROM JONES, "THE WYANDOTTE MAN," THE PINES, PADUCAH, KY.

sioned by their returning to their favorite food after so long an absence from them during Lent.

Dr. Chandler, in his *Travels in Asia Minor*, gives the following account of the manner of celebrating Easter among the modern Greeks: "The Greeks now celebrated Easter. A small bier, prettily decked with orange and citron buds, jasmine, flowers and boughs, was placed in the church, with a Christ crucified, rudely painted on board, for the body. We saw it in the evening, and, before day-break, were suddenly awakened by the blaze and crackling of a large bonfire, with singing and shouting honor of the Resurrection. They made us presents of colored eggs and cakes of Easter bread."

Easter Day, says the Abbe d' Auteroche, in his *Journey to*

to the poor of Dacre, the place of his nativity, 2001, the interest thereof to be distributed every Easter Sunday on the family tombstone in Dacre churchyard, provided the day should be fine, by the hands and at the discretion of a Troutbeck of Blencowe, if there should be any living, those next in descent having prior right of distribution; and if none should be living that would distribute the same, then by a Troutbeck, as long as one could be found that would take the trouble of it; otherwise by the ministers and churchwardens of the parish for the time being; that not less than five shillings should be given to any individual, and that none should be considered entitled to it that received alms, or any support from the parish.

SOME WORK FOR MARCH

Caution in the Purchase of the Pen or Trio Which Will Form the Foundation of the Breeder's Work for Years—Proper Method of Handling the Stock Secured from the First Mating—A Mixture of Seeds Which Form a Good and Durable Pasture During the Entire Season.

Written by Thos. F. Rigg, Associate Editor American Poultry Journal.

"As ye sow so shall ye reap." This is true of all men, in all trades in life. Never before were market gardeners and farmers, and planters in general so particular as to the quality of the seeds they plant. They demand seeds of strong vitality, grown on soil best suited to the proper development of each vegetable or grain, and bred from a line of ancestors of strong germinating power.

This season a very large number—a greater number than ever before—will embark in the standard bred poultry business. Those who have given the question as how to start best the most careful consideration will purchase a trio or pen of stock.

It is to such persons we wish here to say a few words. Be very careful in the selection of this pen or trio. It is the foundation upon which all your work as a breeder and fancier must rest so long as you remain in the business of producing standard bred fowls. You should, therefore, select this stock with the utmost care. You must bear in mind that you take this carefully selected stock and with it produce a distinct strain, a family, of fowls; that you will not frequently introduce a male of foreign blood into your flock; but this male will lay the foundation of a male line of breeding that is to be used for many years.

Now, as to the selection. Keep in mind, and do not lose sight of the fact for one moment that shape and character of form is of more importance in the foundation male than is color. "Shape makes the breed," it has been said, and it is largely true. To illustrate: In one of the shows at which we served as judge this winter a young man exhibited a large string of White Wyandottes. They were in perfect show shape, clean, properly prepared. They were exceedingly white birds. The young man thought he had stock that was sure to score very high. When we were through with them the card told a different story. Each and everyone of them was severely cut for shape. They were not Wyandotte shape, but Rock shape. As a consequence they could not score high because they were so severely cut for shape.

This young man had expended considerable money in getting this flock together, but his money and his labor has all been thrown away, unless it be that he profits by the experience. For him to use any one of these birds, especially any one of the males would mean further loss of time and money, because he could never develop a strain of proper shaped Wyandottes from the stock. He could not, even in years, produce from them Wyandottes that would win even in the smaller shows—because he could not get fowls of Wyandotte shape and form characteristics.

There are so many people doing just as this young man has done that it does seem as though a personal appeal ought to be issued to them to get right. Hence this article.

Be persistent in your study of the standard of the breed and variety you are going to purchase; study, too, the best illustrations of the breed or variety; get the shape and form firmly fixed in your mind, and then have the courage to refuse any specimen that does not approach the ideal. If you will but do this you will do what few beginners have done, or ever will do, and you will soon be producing extra choice stock.

As we have stated, make color the second consideration, but secure it as good as possible in a specimen of the proper shape. Do not place all the responsibility upon the male. Bear in

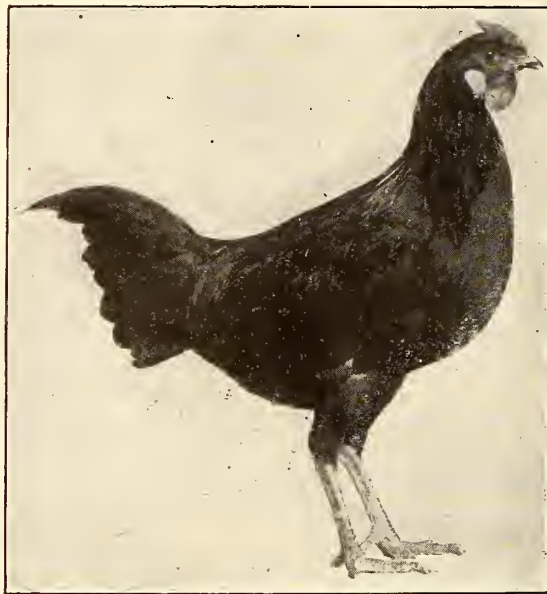

mind that the female, or females, must be of proper shape, for the blood of the dam is something with which we must reckon with in every chick. Size is usually controlled by the dam, as is, frequently, shape and form.

THE FIRST STEP.

A correspondent at Reading, Pa., writes:

"Last season I purchased a trio of White Rocks from a reliable breeder. Raised a number of chicks. Want to now mate up two pens. Tell me how best to do this. The cock bird is a magnificent one, scoring 95 by two leading judges. I want to use him but have been advised that it will not do to breed him to any of the young stock. I want to breed properly."

There are a great many breeders situated exactly as is our correspondent. The next move they make in their breeding operations is a most important one. It means either the retaining of the valuable blood they now possess or the throwing of it away. It could be easily thrown away, ruined as far as its use is concerned, by the introduction of a new male into

ROSE COMB BLACK MINORCA.

This illustration is the first prize Rose Comb Black Minorca at the World's Fair, St. Louis. The cockerel was six months old when the photo was taken, and since then it has developed into even a better bird than is shown here. This cockerel was bred, owned and exhibited by A. Didriksen of Whitewater, Wis., at St. Louis. In addition to this, Mr. Didriksen won 1st prize on pullet at the Chicago Show, which would clearly go to show that he has the right kind of stock in his yards.

the flock. It could be half lost by securing new females to mate with the cock bird.

The proper thing for our correspondent to do is to select a few of the choicest pullets sired by the cock bird and to mate them with their sire.

Select the best cockerel and mate them with the two hens. Do not give the cockerel any of the pullets. The mating of sister and brother is all wrong. In such a mating we have no fountain head from which to draw shape, color or strength.

Such mating as described will be the first step in line-breeding, in practical, systematic breeding, which if properly followed will give one great profit and pleasure.

SOME GOOD PASTURE SEEDS.

Many poultrymen find it necessary to seed their yards and range every spring. Red clover, oats and some of the stronger grasses are usually used. The trouble is that all these are practically killed out by the stock every season, and do not supply the required green food all the summer and fall. If rye is sown in the fall it is eaten by the fowls and chicks early and as a consequence the yards are barren during summer. We have a neighbor who has succeeded in solving the problem. He sows a mixture of timothy and alsike clover. This is sown as early in the spring as possible and the stock kept off of it until it gets a good start. It makes a strong sod and a comparatively small patch will supply pasture all the season for a breeding pen. The alsike clover succeeds on cold, stiff soils and on land too damp for other clovers. If a breeder has land that is wet in the early season, or that is naturally low or shaded this clover is an ideal seed to use. By the time the land is dry enough to be used by the fowls the clover has made a fine stand. It succeeds well, also, on upland.

THOS. F. RIGG.

SUCCESS WITH BROODERS

How to Feed and Care For the Chicks—Where to go For Protection.

The best brooders made can be improved upon, and after we have spent the time and trouble of getting the chicks hatched we need the best brooder we can get. If a brooder does good work the first season, and the next does not, with the same attendant, it is probable the conditions have changed, maybe the lumber has shrunk (and if it is an outdoor brooder which seems to give everyone the best results) it may be rain has leaked or drifted in.

A brooder must be kept dry inside; perhaps the number of chicks is too large; 50 is a large number for a 200 chick machine; or it may be the brooder is full of disease germs contracted the year before from sick chicks, but doing no damage until the next season. A thorough disinfection is always in order every time a new flock of chicks are put in the brooder.

A tried and true disinfectant is one-half pint sulphuric acid (deadly poison, be careful when you use it) to six quarts of water. After the brooder has been thoroughly scrubbed with hot suds and dried, wet all the floor and walls with the sulphuric mixture, let this dry and then whitewash the whole inside with hot lime water. Take a sunny day for this job if possible, and the brooder will be pure as new. When it is dry cover the floor with paper, then put in enough clover or timothy chaff to cover the floor all over three inches deep.

There are substitutes for a floor covering, but nothing quite so good. All things considered, it is soft to sleep in, is easily kicked around, and the little seeds in it induces the chicks to scratch. Besides, the seed is a fine food, and they get it in about the right quantities. The litter should be changed in a week, second week twice, cleaning more often as the chicks grow older.

We never feed in the litter, we feed in the brooders for about a week, but we let the chicks run outdoors when they choose from the first day. We use a shingle to serve their meals on, and remove and wash it after they have eaten. Feeding in the brooder makes them familiar with the way inside. They soon learn that way.

WHERE TO GO FOR PROTECTION.

We use a small yard $2\frac{1}{2}$ by 3 feet, attached to the brooders, in which we limit their range for two weeks, after which we let them go wherever they please, only when it is raining; and it makes a nice place to feed them, where larger fowls cannot eat with them. We always put their soft food on a board, and we keep the yards clean and disinfected.

I have proved to my own satisfaction long ago, that the food question is not nearly as important as cleanliness and temperature. Last, but not least, a chick with inherited weakness or disease is not apt to thrive, if it lives at all, with the best of care.

Chicks with healthy vigorous parents will stand a great amount of neglect and abuse. When eggs are hatching well, I know my chicks will be strong. When they do not, I expect more or less weak birds. We never had sick chicks but that we could trace the cause of it to either getting chilled, roasted, dampness or foul brooders. We have never thought of late that the food made our chicks sick. For the first meals we moistened light bread with sweet milk, and feed every two or three hours for three days. A friend of mine uses whole wheat and has excellent results; sometimes I use whole wheat or johnny-cakes; really I feel certain that it does not matter much what they are fed so that the food is sweet and clean.

I give my young poultry as much of a variety as possible, changing their bill of fare every day; usually we change with light bread, whole wheat, hard boiled eggs, oatmeal, johnny cake, equal parts of wheat bran and corn meal wet up with boiling water, allowed to cool before feeding. Corn meal and clabber cheese mixed equal parts are much relished; so are table scraps. Then for a change once in a while we mix chopped meat also.

We have never seen any extra results from mixing either oyster shells or mica crystal grit in the food, so we put it in a little box for them to piece on, like their big relatives. It is less trouble and does just as well. Then we make water fountains by inverting an old tomato can in a saucer, make a small hole near the top of the can, so when it is inverted in the saucer the hole will be just below the top of the saucer rim.

Of course, in very cold weather we have to put the water in the brooder, but we try to not let it get spilled and wet the litter. We try to keep the water vessels clean, and with clean water in at all times. We are very particular to put our brooders where the sun shines all day, either in early spring

or midsummer. If shade is not near the brooder, we provide it in warm weather; in cool weather my chicks always prefer sunshine all day long. We provide a little box of dust for them, which they always make use of and seem to enjoy it, but if the chicks have been hatched under hens, the dust bath is not sufficient. Dust them once a week at least with a good insect powder. We use a machine that we can dust 40 chicks at a time in, but if we did not have it, we would dust them by hand, for lice always get the upper hand of chicks, if they are together long.

Persian insect powder is as good as anything I have tried; it does not hurt the chick's eyes nor make them stupid if used at night, and it is so finely powdered that a pound goes a long way.

For good results with a brooder, one needs to be as particular about the temperature as we are with an incubator that is imitating nature, for the old hen's temperature stays the same after the chicks are hatched, only she can let them be cooler if they wish to be. With the brooder the first few

FIRST BARRED ROCK COCKREL NEW YORK 1905.

Bred and owned by Grove Hill Poultry Yards, Waltham, Mass.
Wm. Ellery Bright, Prop., A. C. Smith, Supt.

times it is used, the lamp is clean and bright, as well as the other parts, and there is not much bother to regulate the temperature. We fill our brooder lamps with a good kerosene every evening during the cool weather, not because they are empty, but because they will give an even heat longer when the lamp is near full. We rub the charred top off of the lamp wick twice each day and keep the wick trimmed so the blaze is even and never smokes.

After filling the lamp, we wipe all oil, soot and smoke off of the burner and chimney; we keep the whole lamp as clean as though we wished to read by it. We cannot regulate the blaze if it smokes. When we put in newly hatched chicks we aim to keep the temperature near 95 degrees, not above that, for four or five days, after which we gradually lower the temperature as the chicks grow older. By the time they are six weeks old in March we can put them in a coop without a lamp, but we provide a warm place. We put a thick lining of old carpet or such like all around the walls to help exclude the cold air; in June we usually put them in a cool brooder for three weeks, and we do not use any padding around the walls.

This is easy to tell and looks easy to do, and is after one has learned how, but there are so many things to learn be-

fore one can half attend to brooder chicks or any other kind for that matter. The chicks' welfare must be one of the things uppermost on our mind. On a sunshiny day an hour's neglect may cook the whole flock, for if the door is open when the chicks are first hatched, they have not learned to run outside and cool off, so we must watch the thermometer, which should be as near the center of the sleeping apartment as possible, and should be hung securely, or a little neglect of a cold evening may chill the whole brood. Every time brooder chicks have bowel trouble, diarrhea especially, we can remember of having trouble with the temperature a day or two before, and we have got so every time the thermometer runs up above 105 or below 85, while the chicks are less than 10 days old, we look out for trouble with a few at least.

A good remedy for this looseness of the bowels is equal parts of corn meal and wheat bran wet with boiling water, cooled before feeding. Just have it crumbly, and one day's feeding is enough; give them a change the next day, through the cool months we put our chicks to bed at sundown, close the little door, pull down the curtain and regulate the temperature so the thermometer will register the same degree, the degree we wish to keep all night for an hour before our

RED COCKEREL

Prize winner, Brockton, 1904, Chas. F. Thompson & Co., Lynnfield, Mass.

bedtime. If it is raining or stormy, we find it a good plan to put a cover of some kind over the brooder to help keep the temperature regular. In warm weather sometimes we need to open the brooder door a little at nights, especially after the chicks are two weeks old. For rainy days we have a tent like covering of heavy canvas or ticking over our brooder yards; the chicks may run out for fresh air and outdoor exercise and not get wet, either.

This same tent makes a nice shade in hot weather under which to keep the water fountains and feed board, after the chicks are two weeks old, when we let them have unlimited range; we change our brooder location a little every two weeks, because it is less work than disinfecting the ground around it where we have been feeding. We have plenty of room and it is practical for us; we think that one location for the season would be all right, if it was kept pure and clean.

It would need sweeping every day besides a disinfecting every time the brooder was cleaned. It would need a sunny place. The sun is one of the best purifiers. Don't be afraid of the sulphuric acid water, the famous Douglas Mixture is composed of sulphuric acid, one-half fluid ounce, eight ounces of copperas and one gallon of water. A gill of this mixture to two gallons of water for the grown fowls to drink for a tonic.

So you see the danger of poisoning the brood is small from using the disinfectant. When raising brooder chicks or chicks with hens, we must not forget there are conditions and happenings, which we have no control over. Such things we must not worry over, for it does no good. Leave that to a higher power, but things we can do and lose by not doing, we should lay the blame on our own shoulders, and try to do better the next time.

MRS. NELLIE BULLOCK.

FERTILE EGGS.

A Few Valuable Pointers on How to Secure the Best Results—Certain things that are Essential to Secure Strong Fertility.

I have been raising chickens continuously for nearly ten years and during that time have had very little trouble with infertile eggs;—I mean, of course, to any extent—except in one yard a year ago, where I learned quite a dear lesson, as I lost nearly all the eggs from my best mating (Silver Wyandottes) the pen was headed by a very fine yearling male. The year before as a cockerel, he had free range with about 30 hens and I never knew eggs to hatch much better, they averaged about 90 per cent through the season and chicks were very strong and vigorous, so the next season I expected as good results from the male, as I supposed if eggs were fertile one year, it was an indication that they would be again and mated him to 12 of my best females, but was sadly disappointed as he did not fertilize over about 25 per cent of the eggs set. I was at a loss to know the reason, until a Barred Plymouth Rock breeder told me it was all owing to giving him too many mates the first breeding season. She said that it would ruin the larger breeds every time, that she had done the same thing and knew and I believe she was correct. This cock seemed as vigorous and attentive the second season as the first, but germs failed to fertilize. My cockerels are never allowed over 15 mates since then (the only egg order I ever had to duplicate was from this special pen) my other mating proved very fertile the same year, although it was called by nearly all poultry men a very bad season in this respect.

Some breeders advocate using two or three males to each pen and alternating them to secure best results. Where one does not pedigree their stock, and there are more hens than is desirable for one male, and one desires stock from more than one male, with not enough yards to accumulate two or three pens, it may be desirable to do this way, but I doubt if simply as far as fertility is concerned, it would pay. You see I am speaking theoretically now, as I never tried this plan, but a month or so in one pen, and I did not see that there was anything gained in this short trial. The only advantage I can see in this plan is the preference for some special females. The alternating male may show different taste and choose his favorites among the rejected ones, but only in one or two cases have I ever had any trouble this way. This past season I noticed the latter part of the season, one hen's eggs were nearly all infertile in one sitting. I especially desired some chicks from this one mating, and finally found the cock-bird fought her; he would leave his feed to go across the pen to give her a vicious "nab." I only succeeded in getting one chick from this pair (three or four eggs showed weak germs) and a vicious hen killed that.

A small, active breed can be allowed more females to each male than the larger ones, and I also find in my own experience that several mates are better than simply one or two, while, of course, for fancy breeders, it is oftentimes desirable to use a single pair or trio for a mating, still when simply strong fertility is desired a few more females are productive of better results, and, too, in mating, a too heavy male should never be used. We frequently get calls for males over standard weight, but I think little is gained and much lost by using too large males, the quality of size is transmitted more through the female than the male side, and a male much over standard size in any breed is too clumsy and lazy to fertilize germs as well as a smaller and more active one. I should expect a male from one-half pound to one pound under weight to be a better breeder than one of the same amount over weight, but I do not find the same trouble in hens, a large hen, unless over fat, will lay as fertile eggs as her smaller sister, and has the advantage of producing chicks that will be up to, or over standard weight for the breed.

Some writers object to using eggs for hatching from hens that have laid steadily all winter, claiming that the organs are overtaxed and need rest, and that the eggs will not hatch so well or that the germs will be weak. Theoretically this is correct, but in reality it does not always work. For instance I had a pullet last year, hatched March 30th that laid her first litter out by Jan. 1st, she began on her second Jan. 29th when I began to keep her record. During the next 160 days she laid about 117 eggs before taking a rest. Of about 30 of these set at home I think five only were infertile; a number died in shell as did many others during the extremely wet season, but on the average her chicks were remarkably strong

and well developed. She is a large hen, over standard weight of strong, robust constitution (which allows the egg producing organs to do steady fertile work). I have her pedigree back to four generations on one side. She is laying now right through the moulting season; her grandmother, a noted winter layer, did the same. I think pedigree breeding of noted layers of strongly fertile eggs and robust constitution go a long way to insure future fertility.

Now I have cited these cases so readers can see how fertility ran and I will try to tell how the stock was treated to obtain these results, and some things I consider essential to secure strong fertility. In speaking of winter eggs, I mentioned last winter only as it was my first season with an incubator, consequently first trial of winter eggs for hatching. In the first place, the fertility during the winter surprised me, as the stock did not have the quarters nor feed that they should have had. We built a new house where three pens were kept, and it was not finished; did not get it walled up entirely nor

last season in getting clover and this shows that hens *can* be healthy and lay fertile eggs without so much, although I think it economy, and more humane to furnish them all the variety possible. Early in the morning they were fed mixed small grains *warmed*, either oats, buckwheat, etc., or else H. O. scratching feed—latter preferred in litter, not a heavy feed, but enough to get their blood in good circulation, and the keen hunger satisfied; about 10 o'clock millet seed was scattered through the litter, or else bundle of millet was thrown in, which kept them busy until 2 o'clock when a mash was fed consisting usually of boiled potatoes, beets or turnips alternated by apples, bran, middlings, ground oats and corn or else H. O. poultry food, which is better as it contains no hulls and more of a variety, but costs a trifle more, sometimes beans, squash, pumpkin or carrots are added to the mash *and always milk if we have it*, but that is not usual with us in the winter, but I do believe that milk will help to make eggs fertile and am certain it very perceptibly increases the number.

FEEDING PEN OF WHITE PLYMOUTH ROCKS AS BRED BY U. R. FISHEL, HOPE, IND.

banked—and last winter was a particularly trying one, so changeable, thaw one day, then turn so very cold. We banked with snow as well as we could. The house was single-boarded and lined (not thoroughly) with tarred felt, shingle roof, one end had the open scratching-shed with burlap curtain facing south, and I want to say right here every poultry house I have built after this will contain these excellent health preservers for the fowls; this is a very cold climate in winter, but there was not a day last winter that the hens were not in there working and singing, and although mine has a high board floor, which is so cold on their feet that some mornings they had to hold one up under them part of the time to warm, they worked and sang and laid eggs that were fertile too. I do not advocate such treatment, but mention this to be better understood. In the case last winter it was unavoidable. There was not a frosted comb nor sick bird in that house, nor the least sign of a cold all winter.

They had very little meat food and no green food except hemlock boughs to pick at. I certainly believe in feeding meat and green food at least once a day, but I was disappointed

At night whole or cracked corn or buckwheat are usually fed, as they are heat producers. The grain is *always* warmed in cold weather. Mash is fed blood warm. I know the results would have been better in number and size of eggs, if clover and some animal food had been given daily, particularly if green cut bone had been used, but I doubt if fertility would have been raised as I consider a higher percent could not have been expected. During the summer the fowls have roomy, shady yards, liberally sodded to timothy and clover, part have free range. Young stock have free range of 20 acres, which includes the maple grove that has given this farm its name, and insures vigorous, robust constitution capable of producing fertile eggs another season. Of course, it goes without saying that plenty of sharp grit, oyster shells or cracked bone, and pure fresh water are *constantly* before the fowls and the way they make use of these shows whether or not they are needed and appreciated. Now let us consider some of the essentials of fertility. First and foremost, *well matured, healthy, vigorous stock* to begin with and constantly kept so by proper feed and care, which consists in not over nor underfeeding with plenty of exer-

cise, but remember to secure sufficient exercise in winter an abundance of room is necessary. If a hen is constantly busy and comfortable she will be in the second requisite condition, which is contented, and the third is also under the head of exercise, which is *not too fat*. If a hen exercises nearly all day she will seldom be too fat to be in good breeding condition.

I have heard it stated that the reason a fat hen's eggs will not hatch is because she does not favor the services of the male, and while I think it sometimes true, I know it is not always the case, for I have known hens overfat that mated freely, but whose eggs, what few they laid, were almost invariably infertile. I think the reason is that the fat weakens the generative organ. Kill an overfat hen and you will always find "loads" of fat all through the abdominal cavity, the ovaries and all egg producing organs as well as gizzard and bowels are smothered in fat. Is it not reasonable to suppose it weakens these organs, causing non-laying or sterile results as well as poor digestion? A very fat hen is seldom a good layer and very often does not lay at all. In the human race if too much fat is found around any organ, it weakens that organ, take the heart for instance. Why does it not apply to fowls?

I have found millet seed to be very good producer of fertility. While I do not profess to know whether millet contains chemical properties, I imagine it contains considerable albumen, but this is simply "guess-work" to produce fertility, or whether it is simply the result of the necessary exercise to secure the small seeds, but I do know that liberal feeding of it was very satisfactory in my own yards, which is my chief care. I am not sure but this last mentioned essential should have been first, *viz.*, see that the male does not have to see too many females in his cockerel year.

I hope this hastily-written and incomplete sketch may be the means of helping some one. MRS. DENTON COLE.
Winwood, Pa.

Hatching and Rearing Chickens.

The scarcity of new-laid eggs from October to February, which has been as pronounced as ever during the past winter, may be attributed to some extent to the objection on the part of the farmers, cottagers and other poultry keepers to hatch chickens until the warm weather begins. May is the favorite time with many people for setting their hens and the result is that the pullets hatched in June are not sufficiently matured to start laying before the cold and wet fall sets in. There is really no difficulty in hatching and rearing chickens early in the year, provided the stock birds are well matured and healthy. March is an excellent month in which to hatch chicks; the days have lengthened considerably, the sun has attained some strength, and the young birds have all the best of the year, in which to grow and develop. If March hatching were more universal, that almost unknown luxury—a new laid egg in November—should be readily procurable.

Those who desire early chickens in any quantity ought most certainly to avail themselves of the advantage attached to incubators. The difficulty sometimes experienced in procuring broody hens is, at once, done away with. Should the weather be frosty, the eggs that will be required for incubation must not be allowed to lie in the nest for some hours after they are laid, or fertility may become impaired. They should be collected two or three times during the day. If hens are used for sitting purposes, the bottom of the nest should be of earth. The ordinary nest-box, with a wooden floor, can be covered with sifted earth to the depth of six inches, the nest being made basin-shaped, rounded out and beaten down with the hand. The eggs are then more easily covered and the sloping sides act as support and a rest for the hen's legs, which do not become so cramped as when the nest is flat. Then hen should be let out to feed every morning for about a quarter of an hour. If she does not come off when the door is opened, she should be carefully lifted from the nest, without disturbing the eggs.

When the brood is hatched at the end of twenty-one days, the hen should be left in the nest with the chicks for the first twenty-four hours, during which they do not require food, and then she should be put in a coop and at once given a good meal of grain. The young must be carried to her and she will quickly settle down and allow them to nestle under her.

The coop must face south, and be in as sheltered a situation as possible. It must be moved frequently to prevent the ground becoming tainted and the bottom should be covered with an inch or so of dry earth or sifted ashes.

If the chicks are hatched in an incubator, they must first

be put in the drying-box till they are thoroughly dry and then transferred to the brooder. At first the brooder should be kept at a temperature of about 85 degrees, which can be reduced gradually, according to the weather, so as to accustom them to less heat. Many of the brooders are made with a warm chamber and a dry run or nursery and an outer run open to the air. An important point is to see that the ventilation of the warm chamber is satisfactory. The brooder must, on no account, be overcrowded, or the mortality will be heavy.

Many methods of feeding chickens are adopted. At first, they must be fed at least five times a day and at regular intervals. Hard-boiled eggs, chopped fine and mixed with an equal quantity of bread-crumbs is as satisfactory as anything for the first three days, then meal and middlings mixed crumbly with hot water and any of the patent poultry meals. Some chopped up grass is essential, if the chicks do not have access to a grass run. They should have grain, such as wheat, for their last meal.

Poughkeepsie, N. Y.

A. V. MEERSCH.

REMEDY FOR COLDS

What I Consider the Simplest and Most Effective Remedy For Colds in Fowls.

Colds in fowls is one of the most serious drawbacks to the poultry man. And it is a stern fact that most all flocks are more or less troubled with it. The buying of fowls for breeding purposes, or eggs for hatching is the way a good many flocks become infested with it, as many of the fowls bought for breeding have had in their past life a severe attack of cold and have been doctored up, and their offspring, unless extra precaution is taken, are sure to have colds, also many of the eggs bought for hatching have been laid by hens that in the fall of their first year have had a cold, and have been placed by their owners in the breeding pen, and by so doing many more flocks have been subject to the disease, and when once in a flock, whether introduced by buying stock or eggs, or by neglect of the poultry man, it is hard to get rid of. In the first place the saying that (an ounce of preventative is worth a pound of cure) is worthy of everyone's careful consideration, therefore I say be very careful that the fowls or eggs you buy are from parent stock that have not had a cold. But colds are not always bought. They are just as often got by our own neglect. If we have a perfectly healthy flock to start with, by a little neglect on our part we can soon have many cases of cold in our flock. But whether obtained by buying stock or eggs, or by neglect, can be got rid of by using much care and a little medicine. I will first give my preventatives. Don't make hothouse plants out of your poultry at any time of the year. What I mean by hothouse plants is, not to keep them in too warm and close quarters where they can't get sunshine, exercise and plenty of fresh air, as these are necessary to good health and a strong constitution. Have the roosting coop just warm enough that the fowl's combs won't freeze, and have a place where they can go in on cold snowy days just warm enough that with the exercise they get by scratching in the litter for their grain they can keep comfortable. Don't raise the young stock in small close coops where they sweat and steam all night and in the morning when they are let out they stand around and chill and take cold. This is the greatest preventative for cold, in my estimation. I have seen persons have a hen with a brood of twenty-five chicks in a coop two feet square. This won't do. The brood must not be too large. Twenty chicks is a great plenty with one hen, and the coop must be large enough so they have plenty of room and fresh air, and as the chicks grow give them a larger coop. Some broods are kept in too small a coop till late in the fall, till the chicks have grown to such size that they must pile on top of each other to get in the coop, and they sweat and steam all night, and come out on the cold frosty ground in the morning and take cold. As to remedies. If the fowls have taken cold through neglect or otherwise, and remedies must be used, I consider coal-oil and Conkey's Roup Cure the most simple and effective I have ever used. It is given in this way: Take some drinking fountains, according to the size of the flock, and in half of them put Conkey's Roup Cure as per directions on the box, and in the other half put two tablespoonsful of coal-oil and let the fowls take their own medicine. Don't let them have access to any other water, and I am sure the results will be gratifying.

For bowel troubles, paregoric in sweetened water, or camphor in a diluted form, or sweet oil, are good.

VIEWS FROM THE YARDS OF J. C. FISHEL & SON, HOPE, IND.

BROODERS AND BROODER CHICKS.

The Proper Brooding of Chicks is one of the Greatest Problems of the Present Day.

One need supplied creates another. This is the law of progression. Artificial incubation made artificial brooding a foregone conclusion. It would be impossible to find hens to care for chicks in the wholesale fashion made necessary by the hatches from the good-sized incubators. In the very early hatches, at all events, there must be found some special way of rearing the tender babies.

A brooder needs to be something more than a lamp in a box. It seems at first sight such an easy thing to construct a home-made brooder, that thousands have tried it to their cost. Well-nigh as much science is required for its successful construction as for an incubator. Many things must be taken into consideration, nature followed as closely as possible and the most favorable conditions provided, or there will be nothing but loss and disappointment.

Like the incubators, the early brooders were crude devices, that in most cases proved death-traps to the tiny nestlings, but earnest thinkers labored at the problem of artificial brooding, improvement followed improvement, until now there are

but the chief warmth should come from above. Notice that with chicks hovered by a hen, the heat all comes from her body above them.

Ample floor space is a requisite to success. A brooder claiming large capacity, yet contracted in dimensions is not constructed on the right principles. A spacious brooder is of necessity a little more expensive, but in this regard it is better to be "penny-wise than penny-foolish."

There seems to be a widespread misapprehension of the successful methods of using a brooder. The writer has received letters from widely separated parts of the country saying practically the same thing: "I can hatch the chicks all right in an incubator, but after they have been a week or ten days in the brooder they nearly all die." What is the trouble?

There are a number of possible causes. It may be the brooder. As has been already said, that while there are some scientifically made reliable brooders, which can be depended upon to raise successfully a large percentage of the chicks, there are many that are wholly disappointing. Hence the necessity for special care in the selection of a brooder.

Probably the most frequent cause of failure is the crowding of the chicks. Manufacturers have a fashion of advertising 200 chick brooders, etc., when as a fact 200 chickens cannot be successfully cared for in a single flock. Cut their figures in two, and you still have quite as many as can be reared together with any prospect of success. If you crowd them, Nature will attend to the thinning out process for you, and she is apt to do this too effectually for comfort.

Perfect cleanliness is indispensable. The use of chaff from the barn floor aids greatly in this matter. It should be changed twice a week, if the brooder is well filled with chicks. It absorbs the secretions, rendering the task of cleaning a much easier one.

The question of foods and feeding is one of the most important, yet if the other conditions are right, the kind of food does not matter quite as much. The manner and frequency of feeding have more to do with the matter than the food itself.

Most novices feed too early. The best authorities say that no food should be given for at least thirty-six hours after hatching. Just before leaving the shell, the yolk is absorbed into the system of the chick, providing it with nourishment for some little time. If food is given before this sustenance has been digested, bowel-trouble with all the results that follow in its train is apt to appear. Some say that seventy hours is none too long to keep the little fellows fasting. This seems a rather extreme estimate. From thirty-six to forty-eight hours is the safest rule to follow as the writer has found it her own experience.

Sloppy food *must* be avoided. The dryer the food the better, especially during the critical first two weeks. Fine bread crumbs mixed with a little hard boiled egg is an excellent food to begin with. The infertile eggs taken from the incubator at testing time may be thus utilized. Millet seed scattered in the runs about twice a week is good for the little fellows, who like to be kept busy. Do not keep food before the chick all the time, and do not feed oftener than four times a day. Overfeeding is fatal. Do not give them more than they will eat up clean in a reasonable time. If any happens to be left, remove it.

Fresh drinking water should be before them at all times in such a way that they cannot get into it. Some sort of a drinking fountain gives best results. A good home-made device is made of a saucer and a quart tin fruit can. Having removed the cover, punch three or four holes equally distant a quarter of an inch from the edge of the can. Fill the can with water, and invert it in the saucer. As fast as the chicks drink up the water more comes from the can. Where the boughten fountains are not available, this substitute works very satisfactorily and has the added advantage of costing nothing.

When the chicks are old enough to spend the most of the day in the run, a trough, with a board a little smaller than will fit into it with holes bored by a 3/4-inch bit, to float on the water when the trough is filled, is the best watering device we have ever found. Never let the drinking water stand in the sun. It soon becomes poisonous to all the fowl family.

A run is an indispensable adjunct to a brooder. It should be light and portable, fitting closely to the sides of the brooder. It should be covered with small mesh poultry wire to keep out larger chicks, and all enemies to the tender little ones. The chicks should not be let out of this enclosure for two or three weeks. When they are given their freedom the run should be lifted at the end or a door made, just large

BARRED ROCK HEN.

Bred and owned by B. G. Westfall, Oak Grove, Mich.

brooders so nearly perfect that it seems impossible to suggest any change. As one glances through the pages of the poultry papers, the mind fairly reels with the multiplicity of brooders offered. How can a novice choose between them?

The problem is surely a Chinese puzzle, but by keeping a few foundation facts in mind, it will be possible for even the inexperienced to select a satisfactory brooder.

In the first place a cheap brooder is almost as bad as a cheap incubator, a snare and a delusion. Eschew all that are set up on legs, leaving an open space through which the cold winds may blow at will. Such a brooder never can maintain an even temperature. The brooder floor should be at some distance above the ground, but there should be no open space below it. The outside walls of the brooder should come down to the brooder on all four sides. The covers should be overlaid with tin, well painted, making them rain and water proof.

There should also be provision for ventilation without direct drafts. No reputable manufacturer will put a brooder on the market so built that the fumes from the lamp can enter the chick chamber. There are such brooders, but they are worse than useless.

One very important point is that the brooder shall be fire-proof. Otherwise you may have fried chicken before you are ready for it. The lamp shall be a safety lamp, and in all cases when the lamp is underneath there should be a sheet of galvanized iron below the floor with an air space between, and tubes arranged to carry off all smoke and gas.

Bottom heat is contrary to nature and does not work well. Just enough of it to keep the floor dry and warm is beneficial,

enough for them to run in and out, keeping out the larger fowls. In this run they should always be fed. They will not be slow to understand this, and to consider the brooder as their warm-hearted mother and protector.

As the chicks reach the age of three weeks, more latitude may be allowed in the way of food. Cracked corn together with bran may be made into a slightly dampened mass, which should include grit and occasionally beef-meal. If they do not have access to green food this or some substitute for it should be given occasionally. Chopped onions now and then are greatly relished, and serve to keep off disease. Clabber milk made into curd is also excellent food.

The brooder places before the poultry raiser many possibilities. If hens are used as incubators a number may be set at a time and a much larger percentage of the chicks raised

The wooden mother does none of these things. If a careful hand is in charge, under her hover may always be found warmth and comfort. Shut at night safe within her protecting walls, no rats or cats or other enemies can disturb their sweet repose. They are kept in until the grass is dry, and the bright sunshine invites them out into a warm and safe world. Even should a long succession of rainy days come, window sash may make a tight, rain-proof cover to their run, so that they may still have exercise and a change of air.

It is not necessary to speak at length of the labor-saving all this implies. Should a sudden storm come up, every chick will tuck himself away within the bosom of his artificial mother, safe and warm and dry. They will also put themselves to bed at the proper time and only need to have the outer doors closed to be snug and protected through the hours

by putting them, when hatched into a brooder. It also makes possible, in conjunction with the incubator, the early broilers which bring the fancy prices.

It is a fact that hens are not satisfactory as mothers. There are all kinds of hens, and there is little dependence to be placed upon their notions. Unless shut in a coop, the hen always drags her chicks out in the early morning, whether the grass is drenched with dew or not. She is evidently a believer in the early worm, but she is apt to lose half of her chickens as a result of her persistent search for that elusive creature. If she is allowed her freedom, she will take her brood into all sorts of dangerous places; rat-infested nooks; among the hogs to tempt their swinish souls with a toothsome morsel in the shape of her babies. If a storm is coming up, the last place she thinks of is her coop, but sits down to hover them where perhaps a river of water will soon drown them, or at least chill them and cause their death.

of darkness.

To sum it all up, personal experience warrants the assertion that with a good brooder cared for properly and with due attention to feeding 90 percent of the chicks may be raised in a brooder, where we could not expect over 50 percent with hens. Add to this the steps saved, the anxiety eliminated and the argument comes out triumphantly in favor of the brooder. The time is coming when the artificial mother will have its recognized place in every poultry yard.

Rochester, Ill.

MRS. S. B. TITTERINGTON.

Now, having decided what we will do, the next question is, how will we do it? Here we must be very careful. We do not want to make the common errors, for any man starting under the conditions governing our correspondent will make some mistakes. The thing to do is to make as few mistakes as possible.

GUARANTEED SUBSCRIBERS.

To our subscribers the display advertisers of the American Poultry Journal are guaranteed; that is, if any advertiser using display space in these columns is proved to be a swindler, the American Poultry Journal will make good to the subscriber the amount lost. We do not guarantee that men in good standing shall agree in their opinions; we do not guarantee nature against infertile eggs, but we do agree that in case a downright swindler succeeds in swindling a subscriber, we will reimburse that subscriber and publish the rascality of the swindler. We ask, in consideration of this guarantee, that our subscribers, when writing to an American Poultry Journal advertiser, say, in every case, "Saw your ad in the American Poultry Journal." In no case will this be to your disadvantage, while in many cases it may serve you well. In either event we shall be obliged to you.

Further Delay in Issuing the Standard.

At the St. Louis meeting of the American Poultry Association, action was taken which seemed to assure to the public the new Standard not later than March 1. At the association's annual meeting at Minneapolis in January, the Buckeyes and the Rose Comb Rhode Island Reds, under the name of American Reds, were admitted to the Standard; and the committee on publication instructed to have the standards of the two new breeds included in the new book. The committee met promptly for that purpose. A notice now comes to us from the secretary, stating an extra session of the Association has been petitioned for by a constitutional number of the executive committee, and that the president has appointed April 4 as the time and Pittsburg, Pa., as the

place of meeting. As this extra meeting is for the purpose of reconsidering the action of the Minneapolis meeting in admitting the Rose Comb Rhode Island Reds under the name of American Reds, it can be seen the new Standard cannot be given to the public until after that date. This delay is to be regretted.

The New Variety.

Several matters of interest are now transpiring in the poultry field of interest to fanciers. Whatever may be the contention regarding the value and usefulness of the American Poultry Association to the world of breeders at large, the fact remains that it furnishes right along so much material for discussion that it certainly accomplishes the useful purpose of keeping matters pertaining to the poultryman stirred up in the most effective manner.

At the recent meeting of the Association in Minneapolis—it is now a matter of history—two new varieties were admitted to the Standard. One variety, which will hereafter be known as the Buckeyes, and the other variety admitted as American Reds. The American Reds have been known and bred previously as Rose Comb Rhode Island Reds. The Single Comb Rhode Island Reds have for some time been a Standard variety. There was no objection made at Minneapolis to the admission of the Rhode Island Reds as American Reds, and they now exist as a Standard variety, and will so stand, unless through the wisdom of a majority of the American Poultry Association, the Minneapolis action be reversed, and the work done over again. After the Minneapolis meeting opposition developed to the American Reds remaining a Standard variety and being admitted to the new Standard, under that name, and a protest has been made. The constitutional number of the executive committee have petitioned for an extra meeting, and the President of the American Poultry Association has appointed such meeting to be held April 4 at Pittsburg to reconsider the matter. The forces of both sides are now lined up for a battle.

It is to be regretted that this controversy occurs at this time, for the considering of this matter will entail further delay in completing the new Standard, but we trust that the wisdom of the majority will so prevail that the matter be decided quickly either one way or the other. One fact very apparent in all this controversy is that no variety of fowls petitioning for admission ever received more publicity, and we may confidently expect to see large classes of the Reds, under whatever name may be decided for them, occupying prominent positions in the show rooms next winter.

League of New England Poultry Associations.

An item of interest to breeders is the formation of the League of New England Poultry Associations. This took form during the recent Boston Show and resulted in a convention of representatives of local poultry associations of New England, held Jan. 18, at Boston. A similar convention will be held one year from that date, and it is expected that every New England Poultry Association will be included in the league.

The object of this league is to pro-

mote good fellowship among the poultry men of New England and to serve the interests of the Poultry Association in any way in which they may be helped by coöperative efforts. Each local poultry association will be a unit of membership, instead of individual breeders. It was distinctly and repeatedly stated during the progress of the convention that this league will not be conducted in opposition to American Poultry Association, and is not to be considered in any way as a rival of it, and those in attendance, active in its organization, were firm in their intention of opposing the movement if the new society was an organization to oppose or supplant the American Poultry Association.

If this is possible in the New England States, why is it not possible in other sections of the country? Such leagues cannot help but stimulate the interest in poultry matters and benefit every association that would become a member.

Chicago Show Awards.

AMERICAN POULTRY JOURNAL assumes no responsibility for the correctness of show awards, although using every endeavor to have everything that it publishes in this line as nearly correct as possible. We published the awards of the Chicago Show held Jan. 23 to 28, 1905, taking same from the marked catalogue issued by the Association. It has been discovered that there were some errors and omissions in this. We are again publishing this list of awards in another column of this issue, which has been checked up and corrected from the original books of entry of the Association, and the shape in which it is now presented to our readers is, we trust, absolutely perfect and correct.

We are indebted to the Sydney, (Australia) Daily Telegraph for December 27, from which we quote the position of the American hens in the International contest. The Rose Comb Brown Leghorns are still at fifth place; Mr. Howell, whose Silver Wyandottes won so largely last year, has had to see his pen in the present contest drop to second place; a new name, that of Brierley, and White Leghorns are at the top with 916 eggs to their credit for the nine months; Black Orpingtons stand third; the Golden Dottes, which held the top so long, have dropped to sixth place. American Rose Comb White Leghorns stand seventh; Oceanside White Wyandottes have climbed to eleventh position. Much to the sorrow of Red fanciers, the American Reds have dropped to seventeenth. Our White Rocks are sixteenth in line and the Silver Pencilled Dottes stand eightieth.

* * *

The Southern Poultry Courier for February tells of a beautiful sunny, southern Georgia poultry farm named "The Oaks," and to read of it makes one's mind wonder. Among the nice things about the South at this season is the fact that southerners go about their work in their shirt sleeves, while we bundle up so tightly to keep warm, that that work seems almost impossible. Green feed for breeding pens is obtainable the year round. The writer in the Courier says that their early seasons give them an advantage over us as regards big early chicks—all true enough—

but why do not southern breeders show at our large fall fairs and get a slice of the prize-money? There is room for another showman or two at the circuit of big state fairs if they do have an advantage over us.

State aid for the poultry industry is getting to be real fashionable. Nebraska, Kansas, Iowa and Illinois get regular appropriations and Mississippi, Missouri, Minnesota and Colorado want help. Missouri has joined hands—that is, the two factions, the North and South branches of the State association have got together and are now working for the appropriation. For two years they have been at sword's points, but now all is ended. They will get the state aid now that they have gone at it right—and any other state association could do as well as those who get help, if they would work together. It's the continual pounding for the money that gets it.

They do talk in Red circles!
What about?

Why, concerning the Rose Comb Reds and their admission as American Reds to the new Standard at Minneapolis! They were admitted to the Standard—and now the wrangle will begin. The "committee of five" will draft a stand-

ard for them and also for the famous "Buckeyes" from Ohio. Will this new standard for the Rose Comb Reds be identical with that for the Single Combs? This is what down east Red fanciers are saying among themselves. The controversy will boom the breed indeed, and if it comes out right in the end all's well. Some contend that the Rose Combs are not legally entitled to be admitted. We shall see, brethren, some things doing in the Red alley!

Professor Greeley, C. S. Green and Professor Hoverstadt are the only living witnesses to the fact that one Walter Hogan selected from the flocks of the experiment station at Crookston, Minn., those hens which were layers, the poorer layers and the non-layers! By their works he proved his theory and now a publishing company will soon give to the facts and "how" of the system. Trap-nests will have to fly to tall timber and their champions take to the weeds. Give us the formula, oh men of the hen knowledge, we need it in our work and are willing to pay for it!

Partridge Wyandottes are on the boom across the pond. Miss C. Rilots' \$825 cockerel is the subject of conversation in English Partridge Wyandotte circles. The cockerel they fancy over there is too long backed and lanky to suit us—according to his sketch by Andrews. He won a first at the Dairy, the club show, the International and Bedford, as well as three cups. The latter seem to be more highly prized in England than here. Well, he's worth the hundred sixty-five pounds even to boom the breed.

It is a wonder that more pupils are not found on large and small poultry farms. Nearly every farm in the "old country" has its pupils who agree to serve their apprenticeship for so long in return for instruction given. This makes it easier on the working foreman and increases the number of fanciers and poultry breeders. And, after all, what we are striving for is an increased interest in good fowls.

The Minnesota State Poultry Association is right up-to-the-hour in down-to-dateness—eh? Beautiful colored covers for both premium list and marked catalogues! Those men know how to do things and to entertain is not the least of their accomplishments. All report a splendid time at Minneapolis. That's the kind of talk that really does the association good.

Mr. Geo. M. Dewey of Missouri, won the far famed Ivory Soap Silver Cup for the whitest bird on exhibition at the late Missouri state show. Nearly 400 white birds competed for the cup. This is a beauty and worth \$25 of any man's coin. Why do not more secretaries of the big show associations "get after" the soap people for cups to be offered at their shows?

Englishmen are waking to the value of the specialty club's year-book. There are specialty clubs which are giving much attention to the American varieties in England, and strange to say, these are the clubs which are the most progressive! Clubs for the promotion of Buff Rocks, White Wyandottes, Partridge Wyandottes, Silver Penciled Wyandottes

PROFIT IN EVERY PACKAGE

O. K. MAKES POULTRY PAY

O. K. Poultry Food is the greatest egg-maker known. It keeps fowls healthy and active, and by invigorating the system puts it in shape for increased egg-production. It is a pure, guaranteed conditioner—in other words it furnishes the elements needed to put the physical and egg-making organism in perfect condition. The digestive organs are assisted, the vitality increased and your hens look better, feel better, grow better, and lay better. Instead of scrawny specimens, which are too weak and worried to lay, or overfed fowls, which are too fat and lazy to do so, you may just as well have a fine flock of feathered beauties piling up profits in the shape of eggs and meat. Why not begin feeding

O. K. POULTRY FOOD

and make your poultry pay? O. K. Poultry Food cures Gapes, Roup, Cholera, Indigestion, Leg Weakness, Diarrhea and all kindred diseases—promotes growth and development in young fowls. We prove our claims by the experience of our customers. Witness the following:

Blue Island, Ill., Jan. 16, 1905.
The O. K. Stock Food Co.,
Monon Bldg., Chicago.

Gentlemen:—I take pleasure in saying that I have used your O. K. Poultry Food for three seasons and after having had experience with several other makes, have decided that your brand is superior to anything else offered in this market, and have for the last two years used it exclusively. I am very well pleased with the results obtained as my fowls are in the "pink" of condition and certainly produce eggs in larger quantity than when I undertook to do without any food of this character.

You are welcome to use my name and endorsement at all times.

Yours very truly,
(Signed) J. CUNNINGHAM.

An advertiser in the Egg Reporter laughs in glee over the fact that last April's eggs sold in January at 22c. He says, "Prepare to buy the spring's crop accordingly." We are sorry for him who has thus to eat poor eggs and help the commission men and speculators to get rich.

* * *

Mr. Geo. E. Howard has purchased an interest in J. H. Drevestadt's American Fancier, and beginning with the March issues it will be issued from the office of The Feather at Washington. The Fancier will be the weekly edition of The Feather.

* * *

The American Fancier is to take another flight and this time to Washington, D. C., where it will be the weekly edition of The Feather. We hope this will be a more congenial move than its late one down into the region of Indianapolis.

* * *

The "Buckeyes" are now a Standard variety and Mrs. Metcalf's work turned the trick. More women like her are needed in the fancy.

—o—

An observing poultryman says that birds cannot open the foot when the leg is bent. That is the reason they do not fall off their perches. If you watch a hen walking, you will notice that it closes its foot as it raises the foot, and opens them as it touches the ground.

PROGRESS ON THE NEW ILLUSTRATED STANDARD.

The Publication Committee met at Buffalo, N. Y., Feb. 13, 1905. All five members of the committee were present.

Chairman Kimmey announced that we were called together to complete our work by preparing for the new book the standards adopted for American Reds and Buckeyes, as ordered by the annual meeting at Minneapolis, when these two varieties were admitted to the standard.

No serious difficulty was encountered in arranging for the Standard of the Buckeyes.

On taking up the American Reds it was found that the two members of the committee who did not attend the Minneapolis meeting were unalterably opposed to publishing the standard adopted at Minneapolis for this variety. One insisted that this standard, differing in shape, color and weight-points from that adopted at Rochester for Single Comb Rhode Island Reds, would shut out the Rose Comb Rhode Island Reds, which he claimed we had no right to do. The other member insisted that the admission of the American Reds at Minneapolis was illegal, and that this committee must not publish this standard until the whole matter has been reconsidered by a special meeting of the Association, to be called for that purpose.

At this time there was placed in the hands of the president of the American Poultry Association, who is also a member of this publication committee, the following petition:

Mr. D. Lincoln Orr, President of the American Poultry Association:

We, the undersigned members of the Executive Committee, do hereby petition

you, under Article I, Section 1, of the By-Laws, to have a special meeting of the Association called at your convenience, to reconsider the action of the Association in admitting, at the meeting at Minneapolis, Minn., birds to the American standard of excellence under the name of American Reds.

Signed,

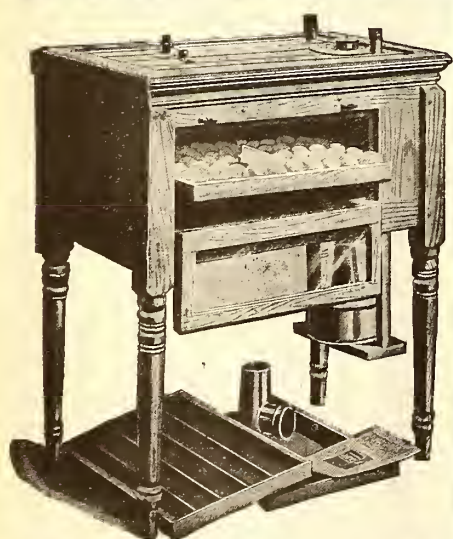

ARTHUR R. SHARP,
A. E. FELCH,
LESTER TOMPKINS,
GRANT M. CURTIS,
C. H. LATHAM.

The president expressed great regret that this action should be taken at this time. He said that the responsibility for thus delaying beyond March the issuing of the New Standard must be borne by those who refuse to allow the instructions of the Minneapolis meeting to be carried out, and by those who thus called this meeting; but he felt that he must comply with the provisions of the By-Laws and call said meeting. He therefore instructed the secretary to call a special meeting of the American Poultry Association at Pittsburg, Pa., Tuesday morning, April 4, 1905, at a place to be hereafter arranged for by the secretary, who shall give thirty days notice thereof by mail to members of the Association.

Some rather warm discussions were indulged in upon the matter in hand, but the only action that could be agreed upon under the circumstances was to arrange the Standard for American Reds, adopted at Minneapolis, so that it shall be consistent with the other portions of the New Standard, and have it ready to present at the Pittsburg meeting. This was done.

From reports submitted, it was shown that the art work on the New Standard,

IT'S ALL RIGHT

"It does the work;" "Sets the neighbors talking;" "Best results with least trouble;" "Works to perfection;" "Best of all makes;" "Want more of the same kind." Hundreds of letters voicing such sentiments indicate what users think of the

PRAIRIE STATE INCUBATOR

The best judge of what a machine is and what it will do is the person who has used it. The increased sales from 20 machines the first year to 20,000 in 1903 have mostly been built on the personal endorsement of users of *Prairie State Incubators and Brooders*. The construction and the ease of operation of the machines are the result of constant study and improvement, and make the *Prairie State* the most profitable machines the poultry-raiser can buy. Used exclusively by the U. S. Government on its experimental farms. Endorsed by the largest poultrymen in this and foreign countries.

Write for a copy of our beautifully illustrated catalogue before you buy—it's free. You ought to know all about the *Prairie State*—winners of 385 first prizes.

PRAIRIE STATE INCUBATOR COMPANY, Box 468, HOMER CITY, PA.

for which we have been waiting, can be completed in about three weeks.

By order of the Publication Committee.

Beaver, Pa., Feb. 16, 1905.

POULTRY RAISING IN EAST TENNESSEE.

The great midland state of Tennessee, extending from Grandfather mountain in the "Great Smoky" section of the Appalachian range to the Mississippi river, and touching eight states on its borders, is like Ancient Gaul, divided into three parts, east, middle and west Tennessee.

East Tennessee is the highland section out of which flow numerous rivers all combining to form the "Tennessee" one of the chief tributaries of the Mississippi. In the early days of pioneer emigration to the west from the older states on the Atlantic seaboard, the hardy sons of Virginia, North Carolina and Pennsylvania climbed over the rugged Alleghenies and set up log cabins on the head waters of these swiftly flowing streams and took possession of the Indian hunting grounds in these romantic valleys.

In all these cabin homes as well as the more stately mansions that went up in after years for the wealthy planters, the domestic fowls were cared for, though wild animals sometimes made sad havoc in the pioneer poultry yard. As far back as memory serves the writer, the rural citizen has found a market for eggs with the merchant and the visiting clergyman in the homes of the people seldom failed to be fed on fried chicken.

When the railroad from the east came down the winding valley of the "Holston" and opened a market in Georgia as well as in old Virginia, grown up chickens began to go out of these hills to the great cities east and west. Eggs and fryers also go the same way now in carload lots. At every railroad station and village store, chickens and eggs are current with the merchant at popular prices.

A great multitude of farmers' wives, sons and daughters are now raising poultry and carrying the products of their labor to the nearby store where food and raiment are dealt out by the obliging merchant. As old time farming of large fields and the fattening of great porkers for "Southern" cotton farmers has shifted to the west, the small farmers of east Tennessee find poultry raising a paying enterprise, and the industry is taking on new interest every year. So it is quite common to see some kind of poultry plant set up by the rich and poor according to taste, leisure or financial ability.

The introduction of modern methods and the establishing of expensive plants for this business exclusively is confined to the cities or larger towns. Poultry barns, wire fencing and incubators for hatching purposes are not common among the country people.

Yet your readers must not suppose that we have nothing but the swift-runners and high flyers of the old-time barnyard fowls which were so hard to get when wanted for the company dinner. There is a mixture of "standard" breeds and all kinds have the freedom of the grain fields and the woodland.

also a chance at the grain in the barn.

The country housekeeper must have the Leghorns for eggs and the Cochins, Langshans, or other large fowls for the table and for market. They swap eggs for a change like boys used to swap marbles at school.

The people are generally natives, born and raised in Tennessee or adjoining states east, very few are foreign born or natives of Northern states. There is a fair prospect of improvement in this industry with the incoming of expert poultry raisers with capital, energy and experience. Many farmers are poor and burdened with debt, owing to adverse conditions of the years when grain fields west attracted the sons of east Tennessee to distant states. Mines of iron, coal, copper, zinc and lead are now bringing new laborers, and growing cities with factories are building up, so that poultry products as well as gardens and fields will be more profitable than in the past.

This is a proper field for the POULTRY JOURNAL. Every home needs such papers. Even the school children can appreciate and be benefited by instructions in poultry raising. The city poultry keeper has different surroundings, but general principles apply to both town and country. Come out, Mr. Editor, from month to month, and speak to the country homes of biddy and her work.

J. R. PAYNE.

Washington College, Tenn.

If we are on the lookout for symptoms, and promptly doctor them, we will have little occasion to treat disease.

LEARN

TO RAISE

POULTRY

If you raise poultry, "do it right." Make it pay as it should. Learn to avoid costly mistakes. Conduct your yard, large or small, on established, money-making principles. Poultry Culture can be made to pay bigger dividends in proportion to investment of time and money than any other branch of farm industry. It offers equal opportunities to women and men.

Complete success comes with thorough preparation. Our correspondence course of instruction will make you an expert. The lessons are sent regularly to your home. The benefits are immediate. Each student is taught individually. You can begin any time. **Now is the best time.** Our teaching is an unqualified success.

We make a business of placing graduates in good paying positions. No charge for the service. Many fine positions open at present. Qualify yourself for one of them.

Write for interesting free literature.

PROFITABLY

ROUP.

Cause of this Disease and Treatment—
Prevention Better than Cure.

During the winter months this department is flooded with letters from all parts of the country asking what ails the chickens and giving symptoms of the disease. Fully 50 per cent can be answered with the one word "Roup." Therefore, for the benefit of those we give herewith, a few extracts from Dr. Salmon's book, "Diseases of Poultry," which we believe will be a great help to the amateur. There are several kinds of roup, and to begin with we will take what is known as contagious catarrh.

Dr. Salmon, in writing on this subject says: "Although much has been written upon the subject of roup, the scientific studies of the disease have been incomplete and there is still much difference of opinion as to its nature. It is particularly difficult, from present knowledge, to say positively whether contagious catarrh and diphtheria are essentially one and the same disease or whether they constitute distinct and unrelated plagues."

At present it seems to be the accepted theory that they are two distinct diseases, rather than two forms of the same disease.

The early symptoms of contagious catarrh can not be clearly distinguished from those of simple catarrh, though the dullness and prostration are usually greater and there is often a peculiar offensive odor, which are valuable points to aid in reaching a decision. There is

at first a thin, watery discharge from the nostrils with some obstruction to breathing from swelling of the mucous membrane. The discharge soon becomes thicker and more sticky or glutinous, causing the affected birds to sneeze and shake their heads in an effort to free the air passages. The subjects are dull, quiet, without much appetite and more or less feverish. The plumage is rough, the wings pendant, the comb and wattles dark red.

"As the disease advances, the inflammation extends from the mucous membrane of the nostrils along the internal surface of the passage connecting the nostrils with the orbital space or cavity surrounding the eyes. The orbital space in birds is relatively very large and has an angular projection towards the front of the beak. There is, consequently, considerable space between the eye-ball and the bony walls surrounding it, which is known as the orbital space or orbital sinus. This space is lined with a mucous membrane which is continuous with that of the nostrils and in such close relations with it that an inflammatory process readily extends from one to the other. Very often in roup this membrane is inflamed throughout these passages, and the process is so acute that the surface becomes eroded and ulcerated. The secretion, instead of remaining fluid as in simple catarrh, changes at this period, is abundant, thick, yellowish, purulent, and cheesy. This secretion accumulates and obstructs the passages. It forms around the eye and forces the eye-ball out of the socket and at the same time collects under the eyelids or on the corner, sometimes simulat-

ing a false membrane. It, also, plugs the nasal passages, presses down the palate, obstructs the breathing and may prevent swallowing.

"The affected birds in the advanced stages of the disease present a most miserable appearance. The beak is kept open in order to breathe, the sight is destroyed by inflammatory products, the eyes are often closed and bulging from the head, the breathing is very difficult, a thick, sticky discharge escapes from the nostrils, the subjects are emaciated, prostrated, sleepy and perhaps unconscious. When these severe symptoms appear, the strength is soon exhausted and death follows.

"Contagious catarrh spreads rapidly through a flock, affecting the greater parts of the birds and causing the death of a variable proportion, according to the virulence of the contagion. It is always a very serious disease and is difficult to eradicate.

"That roup is a contagious disease admits of no question. Its origin in a flock can frequently be traced to the introduction of a bird from some other premises where the disease exists. Often it is contracted by exposure to affected birds at shows, or to the contagion clinging to coops, houses or infected runs. Many writers teach that roup may originate from exposure to colds or draughts of air. This prevalent opinion is probably accounted for by the fact that the first stages of roup are almost identical in their symptoms with simple catarrh or common cold. It is not likely, however, that such exposure is sufficient to produce roup. Contagious diseases are caused by parasites each

IS SHE LOAFING

HOW TO TELL

Every poultryman realizes the great saving in time, money and feed that would result if he could only tell which hens in

IS SHE LAYING

his flock are the paying hens—the layers, and which are the drones—non-layers. It would enable him to stop the biggest leak in poultry culture and pile up profit instead of loss. How can it be done? We tell you how and guarantee not only to teach you to select the layers, but how to select the cockerels that will breed the best layers—the pullets that will lay the earliest and the most eggs by

The Walter Hogan System of Selection

Think what a great advantage this affords. It is a discovery resulting from 35 years of study and experimenting, and has lately been tested by practical poultrymen and pronounced an unqualified success. A recent test at the Minnesota Experiment Station by Mr. Hogan proves the reliability of his system. He divided the fowls into three pens, the best, the medium and the poor. In a 15 day test pen No. 1 averaged 50½ eggs per day; pen No. 2, 37 eggs, and pen No. 3 did not lay an egg. It is easy to learn—we guarantee you can do equally as well with a little practice. Can you afford to continue wasting time and feed on non-producing hens?—it's like throwing money away. Change loss into profit by learning this system and earn money selecting for others. If we fail to teach you it won't cost you a cent. Full particulars and proof free.

The Walter Hogan Co., 17 Nat'l Bank Bldg., Fergus Falls, Minn.

specific disease having its particular species of animal or vegetable life to call it into existence, and without its particular parasite the disease cannot be developed.

"The measures to be adopted for the prevention of roup are the same as for other contagious diseases. Exclude the contagion by every means that can be devised. Do not allow poultry, animals or men to come directly from an infected premises to a healthy flock. Be careful in buying new birds, and these as well as all birds that have been to shows should be isolated two or three weeks until their healthfulness is demonstrated.

"Medical treatment may be undertaken with good chances of success, but requires time and constant attention. Whether it will pay, depends upon the value of the birds and of the services of the party who cares for them. Antiseptic and healing applications are indicated to the interior of the nostrils, the cleft of the palate, the eye, and other affected parts. If swellings containing thick pus or cheesy matter form upon

B. B. RED GAME.

First cockerel Chicago Show, owned by H. D. Schreiter, Darlington, Wis.

the head, they should be opened with a sharp instrument, the contents removed and the wound treated with antiseptics. Antiseptic powders are convenient for treating the wounds caused in such operations. Among these iodoform and aristol are the best. The wound may be kept filled with either of these powders until it is healed. The antiseptic solutions may be injected into the nostrils or into the cleft in the roof of the mouth which communicates with the nostrils, by using a small syringe, a medicine dropper, or even an oil can, such as is used for oiling machinery. A syringe, is, of course, the best. The solutions most suited are boric acid, fifteen grains to the ounce of water; carbolic acid or creolin in the two per cent solution, peroxide of hydrogen diluted with an equal quantity of water; permanganate of potash one grain to the ounce; or sulphate of copper 5 grains to the ounce. Some persons have reported great success from the use of coal oil (kerosene) either pure or diluted with equal parts of olive oil. Some have

IMPORTANT NOTICE To Incubator Buyers.

Unquestionably the incubator that is exciting the greatest stir today among poultry raisers is the pay-for-itself

OLD TRUSTY

The incubator sold on 40 days trial under a 5 year guarantee at Johnson's rock-bottom, anti-combination price.

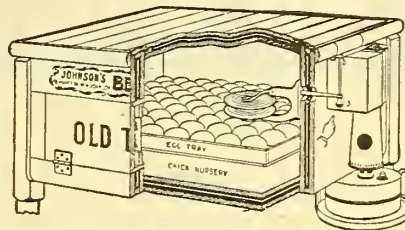

As a poultry raiser you owe it to yourself to investigate this proposition. It costs you nothing to try an Old Trusty and it beats the world as a hatcher and money-maker.

About Johnson.

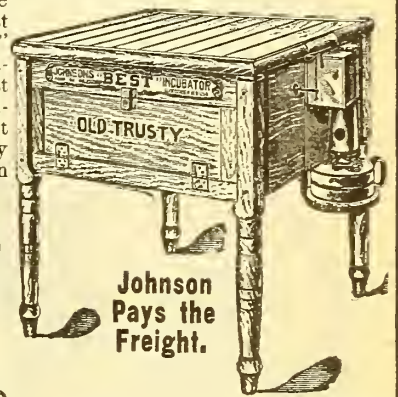

Johnson is the Clay Center Incubator man who has built thousands of incubators and sold them to satisfied users. He has had 12 years experience and knows how. He was a pioneer in selling incubators at low prices and on free trial. He has more personal friends scattered over the country than any man we know of. The preachers, the lawyers, the business men of Clay Center all say that he is an "upright business man, commanding the confidence of other business men and abundantly able and willing to make good all promises to his patrons." Last year, the first year that "Old Trusty" was on the market, he sold 13,000 machines—breaking all records for the first year. He did it because he has an unusually good machine, which he sells at a right price, and because, the poultry raisers of America know that Johnson will give them a fair deal.

About Old Trusty.

Is made of selected California red wood and 12 oz. cold rolled copper; Miller safety lamp; Taylor Bros. guaranteed thermometer; double walls top bottom and side; double doors; two dead air spaces, sides and bottom, automatic regulator and patent copper hot-water heating system. Boiler fitted with patent return hood which saves half the oil; draughts do not affect the lamp. Take a good look at the picture.

Here's a sectional view. Note position of regulator and three walls all round.

Johnson
Pays the
Freight.

"Old Trusty" is built on Johnson's plans after 12 years experience. It is sold at a live-and-let-live price. It is guaranteed for five years and you get

40 DAYS FREE TRIAL.

Don't confuse "Old Trusty" with any other machine. Don't confuse our company with any other. Don't be fooled by mud-slinging. Get an "Old Trusty" on trial and see for yourself what it will do. It's the great pay-for-itself hatcher—with later improvements than any other incubator on the market. And don't forget the price is right

Old Trusty Brooder.

Made of best California redwood, never shrinks, swells or pulls apart at joints. Miller Safety Lamp in solid iron lamp box, no gas can enter chick chamber. Inclined floor prevents chicks from piling up. Enough heat under floor to take chill off. Note the hover cloth frame, partly withdrawn. Chicks hover under cloth warmed from above. Chick backs are warmed and sleepy nerves soothed the natural way. Chicks don't pile up, chill or become overheated.

Send for the Book.

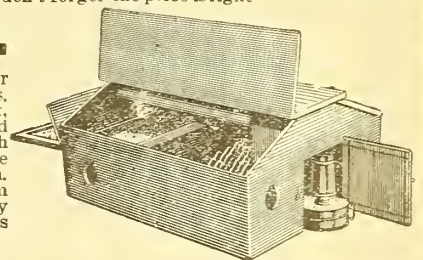

100 pages, 300 illustrations and chuckfull of poultry advice. It's free.

M. M. Johnson, Clay Center, Nebraska.

"The Patriot," Clay Center, Neb., says: "Here at home it is not necessary to speak a word of commendation for M. M. Johnson. The business men of his home town know that the cause of his success is to be found in his own sterling honesty and in the excellent quality of his machines."

The Homemaker, Des Moines, Iowa, says: "The people have found they can trust Johnson. He has the faculty for telling the truth."

Farm & Home, Springfield Mass., says: "He is as honest as the day is long."

had excellent results with a five per cent solution of sulphate of copper injected into the nostrils, the cleft of the palate, the affected eyes and the wounds made in removing purulent collections from the sinus in front of the eyes. This solution appears rather strong and should be used at first with care and in an experimental way until its effects are seen. When the head shows signs of considerable inflammation it may be anointed with sweet (olive) oil, vaseline, or equal parts of sweet oil and coal oil.

"In selecting from the remedies mentioned, it is well to begin with the milder ones, such as boric acid, peroxide of hydrogen or carbolic acid. Keep the birds comfortable and free from draughts of air. Give stimulating and easily digested food containing a small proportion of meat scrap.

"It is important to dispose of the carcasses of dead birds promptly by burning or deep burial."

DIPHThERITIC ROUP.

In writing of this form of roup Dr. Salmon says: "One of the most prevalent and destructive diseases is diphtheria of birds or diphtheritic roup. While some writers are of the opinion that contagious catarrh and diphtheria are caused by the same species of bacillus, differing only in the degree of virulence, the fact that in extensive outbreaks of the former disease there are apparently no diphtheria membranes to be found, bears strongly against this theory and makes it desirable, at least for the present, to describe these different forms of disease separately.

"The diphtheria of birds is a

contagious disease which affects the mucous membranes of the nasal passages, the eyes, the mouth, the pharynx, and larynx, and which may extend to the trachea, the bronchi, the air-sacs, the intestines and perhaps to other abdominal organs. The disease is characterized by a grayish-yellow fibrinous exudate, called a *false membrane*, which forms upon the mucous

BARRED P. ROCK COCKEREL.

Bred and owned by John Culbert, Braceville, Ill.

surface of the parts mentioned. This exudate is intimately attached to the living tissues, so that when it is forcibly removed, a raw, bleeding surface may be left. Its formation may be so abundant as to obstruct the passages through which the air is drawn into the lungs. The appearance of the diseased parts bears a close resemblance to what

is seen in human diphtheria, but the bacillus which is believed to cause ovian diphtheria is quite distinct from that which causes the diphtheria in children and it is therefore concluded that the diphtheria of mankind and that of birds are entirely different diseases.

SYMPTOMS.

"When first attacked the affected birds present the symptoms of common cold or catarrh. There is a watery secretion from the nostrils and often from the eyes, with general weakness and prostration greater than would be expected from simple catarrh. The birds sit with the back arched, the head and neck drawn down towards the body, the plumage roughened, the respiration is more or less obstructed, rapid, audible and strident; the vision is impaired and swallowing is difficult. There is frequent shaking of the head, sneezing and expectoration of mucous secretions. If the mouth is examined at this early period the tongue is found to be pale, while small grayish spots, shaded with black, and slightly projecting above the surface are seen along the border, the upper surface or at the base.

"The following day the condition is aggravated, the temperature is several degrees above the normal, the appetite has disappeared, and there is diarrhoea with greenish or yellowish evacuations. From the open beak there escapes a thick stringy, grayish mucus. The eyes are unnaturally dilated, projecting and partly covered with the thick secretion which has accumulated between the lids. The nostrils are obstructed by the thickened and dried secretion. Walking is irregular and difficult. The mucous

SHE LAYS AND PAYS

The healthy hen is a prosperous, happy hen and pays well for her keeping. She lays and pays. But the lousy, tortured, tormented hen is a loafer from necessity—not from choice. She spends her time trying to rid herself of the tormentors that sap her vitality and leave her no power to produce eggs. The egg-producing functions of the hen are closely connected with her nervous system, and are quickly deranged when the nerve centers are attacked or weakened in any way. To prevent this and to keep your fowls healthy and contented, and in a proper condition to do their best in a natural way, use

Lee's Lice Killer

A liquid preparation of agreeable odor, easy to apply—does not require the greasing or handling of the hen. You can spray it or paint it on roosts, nests and walls. It quickly kills lice and mites either by contact or by its powerful penetrating vapor. Will not hurt birds, chicks, eggs or plumage, when used as directed. Increases your egg-production, promotes health, and pays in every way—the most effective lice killer known. **Lee's Lice Killer** is a necessity to every poultryman. The setting hen sets satisfied when she is free from lice and mites, and she will bring off a bigger, better, healthier hatch every time.

Our 1905 Calendar and Egg-Record—a valuable book full of poultry helps and hints, useful every day in the year—sent free. Write for one today.

Geo. H. Lee Co., Box 91, Omaha, Neb.

SHE SETS SATISFIED

membrane of the mouth and pharynx is red, congested, inflamed and shows numerous dark red elevations covered with fibrinous exudate. The patches on the tongue have increased in size. They are gray in color, dried along the edges of the tongue but soft and flattened upon its surface and are covered with membranous deposits. The voice often fails.

"The third, fourth and fifth day the whole interior of the mouth may be

a five per cent solution of carbolic acid about once a month, and where the disease has made its appearance this solution should be used once a week until all traces of the disease has disappeared.

The prevention of diphtheria is more successful than its cure, but where the disease does make its appearance the sick birds should be removed at once and placed in a warm ventilated, clean, dry hospital room, where they will not be exposed to draughts of air, and where

Tincture of iodine has been successfully applied to the diseased parts of the mouth, and a solution of salicylic acid in water, one grain to the ounce has been recommended for the eyes.

An excellent remedy is made by dissolving thirty-five grains of chlorate of potassium and two grains of salicylic acid in one ounce of water and adding one ounce of glycerine. This liquid should be applied to the diphtheric spots two or three times a day and may also be given internally in the dose of a teaspoonful to each fowl. Stimulating and tonic remedies have been more or less successful, and are especially valuable in the chronic forms of the disease. The following combination may be used: Cayenne pepper, sulphate of quinine and sulphate of iron, of each one grain. Mix and make into pills with a small quantity of syrup. Give at one dose.

Fowls which have been affected should not be returned to the flock for thirty days after they have apparently recovered, otherwise they may still communicate contagion.

THE PROFIT ON 25 HENS.

Mr. Editor: I wish to give you a statement of my past year's profits from a flock on an average of 25 Rose Comb White Leghorn hens for the year beginning Jan. 1, 1904 and ending Jan. 1, 1905. I did not force my birds to lay all the year. I believe they should have a little time for rest. They laid 3,485 eggs.

Value of eggs sold.....	\$77.83
Value of eggs used for table and setting	13.67
Value of poultry for table.....	3.96
Value of droppings.....	2.00
Value of stock sold.....	32.83

Total receipts.....	\$130.29
Expenses, feed, etc.....	36.57

Net profit \$93.72

This was done on a town lot. No doubt this can be surpassed, but there are many who fail to make their stock yield them a fair profit. I believe when you intend to keep a few chickens on a town lot you should keep nothing but pure stock. They will become a source of pride and diversion to you. To me they are a real pleasure, and nothing I delight more in than to sit down and have them come and eat out of my hand and fly upon my shoulder. To the beginner I would say, buy pure stock for the start. It will pay you big in the end.

GEO. T. BERRIKER.

WHITE PLYMOUTH ROCK PULLET.

Winner of Silver Cup Special, offered by the Ivory Soap Co. for the best white fowl, any age, sex or variety, Cincinnati, January 17 to 21, 1905. Bred and owned by Mrs. Orebaugh, Batavia, Ohio.

covered with false membranes obstructing almost completely the opening of the pharynx and larynx. Swallowing is very difficult or impossible and breathing is liable to be arrested at any time. The false membrane first appears as a thin yellowish or grayish layer and becomes thicker as the disease advances."

Diphtheria of birds is undoubtedly contagious and preventive measures should be taken at all times. Disinfect the poultry houses and runs with

they can be readily caught for examination and treatment. Apply three times a day to the diphtheric spots in the mouth and eyes a two per cent solution of either creolin or of pure carbolic acid in water and if possible inject a small quantity of the same solution into the nostrils. Remove the diphtheric membranes as soon as this can be done without causing bleeding from the affected surface and continue the application of the remedy.

PHOTOGRAPHY OF FOWLS

Some Stray Thoughts on this Subject
by Rev. C. E. Petersen.

There is a whole planet waiting to give its work to a man who can make a good photograph of a bird. We have some greatly esteemed artists who can use pen and ink, but mighty few real, live poultry photographers! A few good photographs and halftones of fowls appear each winter, but we wait for the man who can and will use his camera the year 'round for the poultry man.

GEORGE C. BATES,
Editor American Poultry Journal.

We fully agree with the above statement, and yet it is not for the lack of photographers that can and will take pictures of fowls, but for the lack of poultrymen that will accept said pictures, for what is true regarding human beings is also true regarding the fowls, though the fowls themselves are not the judges in this case, but the men who are back of the fowls, but who do not want the fowls portrayed as they are, but want what is

A prize winner at the great Chicago Show, 1905, bred and owned by F. H. Stanwood, 433 N. Harvey Ave., Oak Park, Ill.

called by the pen and ink artist an "idealized picture." Now the camera does not idealize anything, but will give an exact reproduction of the fowl with its good and bad points made visible to all who are able to judge of them. There is, of course, something that depends on the operator and something that depends on the fowl that is to be photographed. The operator must know his business, must be familiar with his subject as to what is wanted, and know how to show off its good points to the best advantage. There are some fowls that will not pose under any circumstances, and those birds may be the best in the yard. It is needless to try, for they cannot be portrayed in such a way that the picture will give an adequate idea of the merit of the subject. On the other hand, there are fowls who can be put in any desired position, that seem to know how to pose, that seem to like it, and will strike attitudes and hold them long enough to make a good photograph, but even that will not make an exact reproduction of the subject, except the operator knows what the bird should looklike in its natural pose. We can, of course, not put shape on the fowls that do not possess it in the first place, but an operator who does not know the value of shape in a bird can make a distorted picture

of the best shaped bird. It is for him to know how to pose the bird so it may show off to the best advantage as far as shape is concerned.

As to color much is to be learned by the average camera operator, such as what light to use, plates and chemicals, all of which bears an important part to produce a successful fowl photographer. Colored screens are an absolute essential to reproduce successfully the different marks on vari-colored birds and

ever realized, for a poor photograph is not a business bringer. As the impression of a bad photograph is not favorable to the observer, even though the caption may state that it is of a noted winner.

Pure White fowls, and pure Black fowls, and an intermixture of White and Black, can be successfully photographed on the ordinary plate, as pose and shape stand for more than colorings, but any of the Buff varieties and Partridge colored

in most of our poultry journals idealized photographs that are not photographs, but are simply fake pictures finished up to suit the purchasers, a touched up negative, which is a good deal worse than to leave it as it was, as it simply indicates dishonesty on the part of the combination that produced the picture and gives an idea that faking, if used in the production of the picture, which is supposed to represent the bird as it was, that the same persons would

FIRST · PEN · WHITE WYANDOTTES · · BOSTON · · 1905 · OWNED BY · A·C·HAWKINS · Lancaster, Mass.

without the use of isocromatic plates, not much can be done in this direction. Now the use of isocromatic plates and the color screens means an excess of time for the exposure, which is not necessary when the common plates are used, and it can be readily seen that when such an unruly being as a fowl is to be photographed, that the excess of time in ninety cases out of one hundred means a complete failure. We have spoiled plate after plate to get one good photograph, and we have photographs today of our Houdans that as far as the cost of production is concerned, cost us more money than even Franklin Sewall, the artist, would have charged us for the ideal pen and ink sketch, but they have given us far better satisfaction. Now the ordinary poultryman does not want to go to such expense, and therefore feels satisfied with an average good picture that may cost more money in the loss of trade than he fowls cannot be successfully reproduced

without the use of the isocromatic plate. Accessories, such as backgrounds, light shades, etc., are essentials that will do much to facilitate in the hands of the one who knows how to use them, fowl photography. We are beginning to see

not hesitate to fake the bird itself, if this could be done, and it is always observable, and even a novice in the business is not deceived thereby.

There is nothing under the sun that will carry so favorable an impression to

He Cures Sore Eyes Free

Famous Chicago Professor Makes a Startling Discovery of a Magic Eye Lotion that Cures all Sore Eyes and Has Restored the Sight to Hundreds of People.

His Grateful Patrons Tell of Almost Miraculous Cures of Cataracts, Granulated Lids, Wild Hairs, Ulcers, Weak, Watery Eyes and all Eye Diseases.

He Gives His Marvelous Medicine Free to all Who Write to Him.

I have discovered the marvelous, magic secret of perfect sight and I have repeatedly restored to sight persons who have been nearly blind for years. Every day brings letters from people in all parts of the country who had given up in despair; doc-

Prof. Herman T. Schlegel, the Famous Eye Expert.

tors and remedies had failed them and they were slowly going blind, yet this magic remedy of mine quickly relieved their pain and soreness and restored their eyes to perfect health and sight.

Ulcers, wild hairs, granulated lids disappear almost instantly with the use of this magic remedy. Weak, watery eyes are cleared in a single night and restored to perfect health. It never fails. It has repeatedly cured where all other remedies and all doctors had failed. It is indeed a magic remedy and I am glad to give it free to any sufferer from sore eyes or any eye trouble.

Hundreds have thrown away their glasses after using it a week. Preachers, teachers, doctors, lawyers, engineers, students, dressmakers and all who use their eyes under strain find with this Magic Lotion a safe, sure and quick relief. If you have sore eyes or any eye trouble write me today. I am in earnest in making my offer of a free bottle of this lotion. It is the only positive cure for cataract known, and I am glad to furnish proof in many well-proven and authentic cases where it has cured cataract after the doctors said that only a dangerous and expensive operation would save the sight. If you have eye trouble of any kind you will make a serious mistake if you do not send for my great free offer of this magic Eye Lotion. Address, with short description of your trouble, Prof. Herman T. Schlegel Co., 903 Mackinaw Bldg., Chicago, and you will receive by return mail, prepaid, a trial bottle of his magic remedy that has restored hundreds to sight.

Poultry Supplies.

As we are the largest as well as the oldest dealers in poultry supplies west of the Mississippi river we can offer many items of interest to poultry breeders. We also handle thoroughbred poultry and **EGGS FOR HATCHING**. Don't fail to send for a copy of our new illustrated price list. Complete catalogue of seeds, plants, etc., also free if you mention this paper. Write at once.

IOWA SEED CO., DES MOINES, IOWA.

the purchaser as a good photograph, and nothing that will detract and hinder sale so much as a bad one. We have for years photographed each bird in our breeding pens, and sent our proof photographs to would-be purchasers of eggs, and in case of stock have photographed the individual bird, that the purchaser might get some kind of an idea of what he was to expect. Sometimes we have even gone to the trouble of photographing the bird in parts—that is, head, wings, body and feet—that no doubt might be left as to the general make-up of the fowl. This, of course, is not done except where a person is willing to pay sums ranging from \$25 to \$150 or more for a single specimen, and we think that he is entitled to all this, as well as purchasers of any other goods have a right to expect a fair representation of what they are to buy. Another factor in successful fowl photography is the lens, and the camera, which must be of the highest grade to produce good results, and that lens that will cover a five by seven plate without making distortions of any kind cannot be bought for less than \$75, which is beyond the purses of ordinary poultry men, and so the more reason for a fowl photographer who knows his business well enough, so as to have the bird shipped to him, that at home he may photograph the fowl, and, like any other photographer, send proofs of the same to the person who is having the fowl photographed. It may be well to mention that one of the most successful methods in giving a purchaser an idea of the fowl he is considering the purchase of is by means of the stereoscopic picture. There is in most every house a stereoscope, and no one can imagine with what facility a sale is made when you bring the bird to the purchaser almost an exact representation of the living bird, shape, style, and general make-up—yes, even the color markings and lacings may be plainly seen.

We have noted bird photographers, and photographers of animal life, who are known all over the world, and, as has already been stated in the editorial paragraph from which we are making our observations, and few real live fowl photographers, who will and can use his camera for the benefit of the poultry fancier.

SPECIALTY JUDGING.

If the poultry shows that employ more than one judge would get specialists to pass on each variety and not employ so many "all-around" men, there is no doubt but that the awards would be placed nearer where they belong in most cases.

Get a well-known and successful breeder to judge his specialty and not have a breeder of Minorcas place awards on Wyandottes, etc. An "all-around" man is not as good as a specialist in any line.

Yours truly,

R. W. R.

—, Man., Dec. 19, 1904.
Dear Sir:—The birds arrived in good condition. I am very well pleased with them. I am,

Yours truly,

A. G. L.

—, Pa., Dec. 10, 1904.
Dear Sir:—I received the cockerel this evening, and am highly pleased with him. He is in the best of health and condition, and consider that you have done very well by me, so much so that I would like you to let me know what you could let me have two yearling hens for, as mates for him, as I think it would be a shame to mate him to the hens that I have, as he makes them the worst looking scrubs that I ever saw. So have concluded to get two, at least, and begin over again at the beginning, as it will be the best way, I think.

Yours truly,

D. M.

—, Mass., Dec. 28, 1904.
Dear Sir:—The birds came yesterday. To say that I am much pleased does not half express my pleasure. Found one egg this a. m. Yours truly,

G. M. C.

—, Me., Jan. 5, 1905.
Dear Sir:—The birds came all right, and on my return home, January 2, I was glad to find them in the hen house. They are a fine looking pair and I am much pleased with them.

Very truly yours,

R. T. H.

—, Mass., Dec. 6, 1904.
Dear Sir:—The pullets came in good order, and are a nice looking lot. I am much pleased with them. They are doing well. The cockerel is a fine looking bird. I wish to thank you for him, and the extra pullet, which I was surprised to see. They make a pretty sight in their yard.

Again thanking you, I remain,

Yours very truly,

S. W. B.

—, Mass., Dec. 26, 1904.
Dear Sir:—I want a Wyandotte cockerel. I had a cockerel and two pullets of you two years ago. Have the old cock yet. I took 2nd pen in S— with him, scoring 92¼; pen, 185 2-16: the last pen, 185 13-16. But he is too old to breed from this year. I have some fine pullets from him.

Yours very truly,

W. F. N.

—, Md., Dec. 26, 1904.
Dear Sir:—My birds arrived Saturday in fine shape, and must say that I am pleased with them, and every one that I have shown them to likes them. What could you make two more good pullets for, to add to the pen I just got? Give me a prompt answer and I will order at once. Let me say again that I am more than pleased. So if you can give me two more good ones, let me know the price at once. I am,

Yours,

W. W. B.

—, Mass., Jan. 6, 1905.
Dear Sir:—The cockerel I bought of you is at the head of the Second Prize Pen at B— this week. Yours truly,

H. W. K.

—, Mich., Jan. 7, 1905.
Dear Sir:—Please pardon my delay in acknowledging receipt of bird. Christmas holidays are always such a busy time. I am very much pleased with the bird. He is very much at home now. If ever you come my way would be pleased to have you call and see my

chickens. I would like to have your opinion. If you have one of those club buttons for me, please send.

Very respectfully,

A. M. M.

—, N. J., Jan. 5, 1905.
Dear Sir:—Birds arrived all safely and I am well pleased with them, thanking you kindly for good selection. Will order eggs from you later. Wishing you a prosperous New Year, I am,

Yours truly,

A. B. D.

—, N. Y., Jan. 21, 1905.
Dear Sir:—The trio you sold me arrived safely, and I am very much pleased with them. They have a nice new home and seem to like it. I thank you for sending me such nice birds.

Yours truly,

F. W. S.

—, N. H., Jan. 27, 1905.
Dear Sir:—The cockerel came O. K., and I am well pleased with him.

Yours very truly,

A. W. P.

—, N. J., Feb. 1, 1905.
Dear Sir:—I received the three pullets on Monday afternoon all O. K., and I am very much pleased with them for money sent you. You will hear from me a little later in regard to eggs. Respectfully,

H. W. R.

—, N. C., Feb. 9, 1905.
Dear Sir:—The bird you sent me is a fine one, and I hope to have some good results from him. Accept many thanks for sending such a nice one.

Very truly,

H. S. W.

—, Ky., Feb. 4, 1905.
Dear Sir:—I would have written to you sooner about the cockerel, but I was busy at the show. I was awarded first premium on him, and there were about thirty other competitors against him. I refused an offer of \$30 for him at the show, and I had several people at the show compliment him.

Yours truly,

T. L. M.

(If A. P. J. would only cut the rate in two, I would make it two or more pages.)

This is the same kind of stock that you want, or eggs that can give it to you. Then why hesitate, for as sure as fate, practically every successful White Wyandotte breeder has come to Duston's strain sooner or later. Why not take a short cut and come at once? A specialist for ten years. Send two-cent stamp for catalogue.

We can furnish you anything in the line of Manufactured Articles, Roofing of all kinds, Wire Fencing, Pipe, Furniture and thousands of other items. **ASK FOR OUR SPECIAL CATALOGUE 186. CHICAGO HOUSE WRECKING CO., EXPOSITION GROUNDS, ST. LOUIS, MO.**

A Better Incubator.

We waited a long time before making an incubator—waited long enough to find the weak points in incubators in order to avoid mistakes in this one. We have experimented until we are satisfied. We know the

Belle City Incubator

is right. It has double walls, providing large dead air space, which means perfect insulation all around. It is self regulating. We use only best 14 ounce copper for making the heating tanks, because copper is the only material which is safe and durable. It's a non-moisture machine—saving time and trouble. Has a large and roomy nursery under the egg tray to care for the newly hatched chicks. Very light, strong and durable. Can never warp, shrink nor crack. "We make a double walled brooder that raises all of the chicks. Our book, 'Hatching Facts,' isn't like other catalogs. It goes deep into the reason of things. You ought to have it. We mail a copy free upon request. Write today. We pay the freight. Belle City Incubator Co., Box 27, Racine, Wis.

Easier Work—More Money

"CORNISH INDIAN GAME CLUB."

I think it is high time we breeders of C. I. Games get together and form a club. I believe the C. I. Game to be one of the best general purpose fowls known, the very best table fowl on earth, *bar none*. I have been breeding the "Indian Game" for over seven years, and have made a careful study of this variety, and will say right here had I not found the many good qualities in the "Indian Game" I would have discarded them long ago for some variety I thought better. But I can say with all true belief and honesty, that I will be breeding the "Cornish Indian Game" 20 years from now. I urge all breeders to take a personal interest in forming a club to place the "Indian Game" in the front rank, where they rightly belong. I would suggest calling the club "The Cornish Indian Game Club of America." There are many well known breeders of this variety in the west as well as the east, and from their number we could select a secretary and other officers to manage the affairs of a club. No doubt W. S. Templeton, of Dakota, Ill., can give us some light on the "Indian Game Club" of a few years ago, when the variety was comparatively little known in the west. Mr. Templeton was secretary of the club. He might be willing to act in that capacity again, now that the "Indian Game" have a firmer foothold. Rev. Huey, of Casnovia, Mich., is an enthusiastic breeder who no doubt would have time to attend to correspondence relative to forming a club and acting as secretary. There are many breeders in the east who would be interested. I have a letter from a gentleman high up in the management of the big Chicago show, who in a letter to me says he will personally guarantee a valuable prize to be competed for by the "Indian Game" breeders at the next Chicago show, January, 1906, providing we will guarantee an exhibit of 60 or more birds at that show. Now, brother breeders, I cannot guarantee an exhibit of this size without your hearty co-operation. I will, however, guarantee an entry of 20, perhaps 25, birds from Oconomowoc, Waukesha county, Wis., and not all from our own yards, either. Now it is up to five other breeders to enter 10 or more birds each, and a few others from two to five each, and we have more than the required number. An entry of this size will do more to stimulate an interest in our variety than anything else we could do.

I should like to hear from other breeders. Don't hesitate. Be wide awake and take a personal interest in this matter. It is no great expense to be a member of a "Specialty Club." Dues, \$1.00 a year, and this money to be used for current expenses such as stationery, postage, etc., and even then there is money left to offer special club prizes, such as cash, ribbons, etc. We will all derive a lasting benefit from a comparatively small expense. We should surely be interested in placing our variety in the front rank and this is the only way we can accomplish that end.

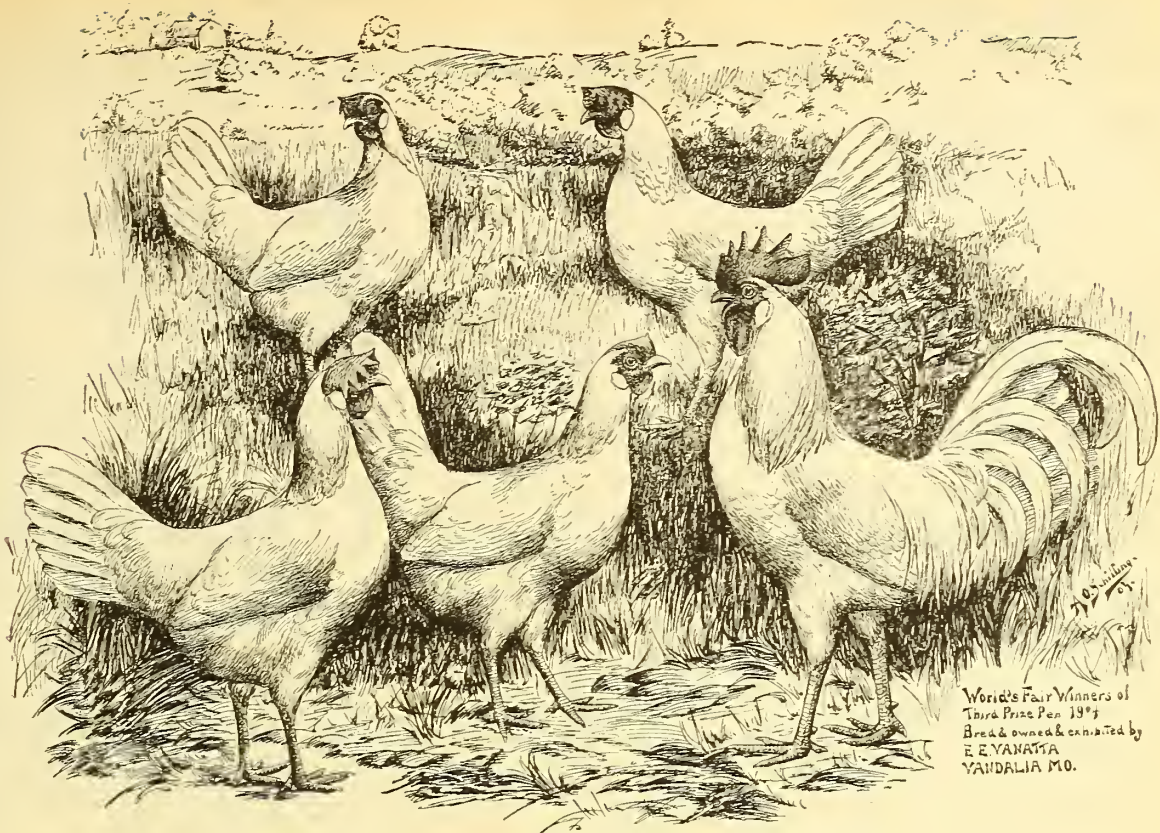

Very truly yours,

CHAS. S. BRENT,
of Brent & Eddy.

THE GAME FOWL.

If the editor of your valuable journal will permit I would like to say a few words. One thing that I notice among the articles of many poultry writers is the absence of anything regarding the utility qualities of the game fowl. Most editors no doubt believe that the game papers will take care of the game fowls without any other aid, and again it might be attributed to the fact that there are a great many people that have an idea that the game fowl has very little value other than its ability to fight. However, those who are intimately acquainted with these excellent and beautiful fowls, will testify strongly to the contrary. The writer makes a spec-

ialty of raising the black breasted red game fowls, but he begs leave to inform the readers of THE AMERICAN POULTRY JOURNAL that under no consideration would he stoop to fight them. God gave this noble bird courage and strength to defend itself and family, but I think it is brutal to fight them as it is practiced by some. The Game is a practical fowl for the farmer. They are extremely hardy, consequently are easier to rear than most any other breed. They mature very young, and they are conceded to be as fine, if not the finest, of all table fowls. They are excellent layers, of medium-sized eggs, richly flavored. In fact we have game hens that have egg records that would equal those of many of the so-called great laying fowls,

and by their extreme hardiness they will thrive and do well where most other fowls would require the greatest care. They are also great foragers. I allow my games free range when the weather is not freezing, as I think they thrive better and grow larger than they would if hampered too much in close quarters. As to their fighting, there is no doubt but what they are gritty, but my cocks and cockerels all run on free range together and I have very little trouble with them. Not any more trouble than my neighbors who raise the Barred or White Plymouth Rocks have with their cocks. By the way, did any of the readers of this JOURNAL ever take notice that an old Plymouth Rock cock is not so poking when it comes to a scrap. As

A FREE FOR ALL HATCH

JEWEL INCUBATORS and BROODERS are sold on **thirty days' free trial**—a guarantee backed up by a capital of \$2,000,000. We will prove to anyone

that our machines are more accurate and sure than any others known. Perfect regulation, automatically controlled. Our Supply Catalogue gives full particulars concerning our unequalled offer and tells how to raise poultry at the least expense. A large three color picture of a White Plymouth Rock cock, that sold for \$500.00, will be sent those interested. We are the largest poultry supply dealers in the world.

JEWEL CHICK FEED is prepared and manufactured by us. It is guaranteed to raise more chicks to maturity than any other grain feed known. It is a perfectly balanced ration. Money refunded if it fails. No dirt and mill sweepings found in this mixture. Only pure, sound and wholesome grains used in the Jewel Feed. No up-to-date farmer or poultryman can afford to be without our catalogue. It's Free.

Paint Without Oil

Remarkable Discovery That Cuts Down the Cost of Paint Seventy-five Per Cent.

A Free Trial Package is Mailed to Everyone Who Writes.

A. L. Rice, a prominent manufacturer of A dams, N. Y., has discovered a process of making a new kind of paint, without the use of oil. He calls it Powderpaint. It comes to the consumer a dry powder, and all that is required is cold water to make a paint water-proof, fire-proof and as durable as oil paint. It adheres to any surface, wood, stone or brick, spreads and looks like oil paint and costs about one-fourth as much.

Write to Mr. A. L. Rice, Manufacturer, 453 North St., Adams, N. Y., and he will send you a free trial package, also color card and full information showing you how you can save a good many dollars. Write to-day.

to a fancier's fowl there is nothing handsomer than a flock of Black Breasted Red Game Fowls in full plumage. With all honor to other breeds, I take off my hat to the Black Breasted Red Game, as he is my ideal fowl.

ORVILLE D. CHINN.

HOW TO MAKE \$900 PER YEAR FROM 400 HENS.

Editor AMERICAN POULTRY JOURNAL:

The question is often asked, how many hens should be kept to insure a profitable business?

In answering this question we propose to use estimates which we assure you are conservative, and which can be depended upon as absolutely low, rather than high estimates. By use of the proper feed, it will be easily possible to realize 6,100 dozen eggs per year from 400 hens, which will necessitate each hen laying about one-half the year, allowing the balance of the year for moulting and rest. This you must admit is conservative. Now we will set aside 100 dozen eggs for hatching (1,200 eggs.)

From these you should hatch 800 chicks and raise 500 of them to maturity. This also is very conservative. Now we have 6,000 dozen eggs to sell. These will average you 20c per dozen here.

Now let us proceed to figure:
 6,000 doz. eggs for market @ 20 cents.....\$1,200.00
 500 young chickens at 40 cents. (They will average more.) 200.00

Total for year.....\$1,400.00
 Our feed for 400 hens and young chickens, cost per year..... 500.00

Leaving a net profit of.....\$900.00
EDWIN W. FLY.

Chalfont, Pa.

AMERICAN POULTRY JOURNAL, Chicago, Ill.:

The committee chosen by the American Plymouth Rock Club to solicit cash specials for the next meeting of the club, to be held at Madison Square Garden, New York, 1906, report that they are well satisfied with the subscription up to date, considering the number they have heard from; but if all interested would send in their subscriptions at their earliest convenience it would facilitate matters exceedingly.

In order to assist the committee in selecting judges they would like to hear from all probable exhibitors an expression of opinion in regard to the same.

Will all interested write to C. H. Latham, Secretary, Lancaster, Mass., their preference for judge.

C. H. LATHAM, Secretary.
 W. E. BRIGHT, Chairman.

We read some years ago, but never had occasion to try it, that a poultry house could be rid of rats, minks or weasels, by using coal tar. The advice was to pour the tar in the holes, runs, etc., made by these animals, and they will remain away as long as the tar lasts.

BROWN LEGHORN CLUB MEETING.

The first annual meeting of the new American Single Comb Brown Leghorn Club was held at the Coliseum, Chicago, Jan. 25, 1905, at 2:00 p. m. A more complete set of officers was elected and the new and more complete constitution was adopted. Since its organization at St. Louis, Oct. 29, 1904, the club has made a very healthy growth, and from the many applications received, not only from new applicants, but from those who were one time members of the old club, it is proof conclusive that their loyalty to the breed they represent is by no means lagging, and that they propose to be identified with and help to build up a club that shall be alive the year round. The old Brown Leghorn Club was a Chicago organization and lived practically only at the time of the Chicago show. After this club was practically dead they elected W. Theo. Wittman president. Soon after this, the secretary resigned his position. As the club was and had been practically dead for some time, Mr. Wittman called for a meeting of Brown Leghorn breeders at St. Louis, Oct. 29, 1904. At this well-attended meeting (all but one being members of the old club), it was voted to organize a new club and draw up a new and more complete constitution. It was also voted to hold the first annual meeting at Chicago show, Jan. 25, 1905, 2:00 p. m., when permanent organization and adoption of constitution was to be effected.

It is reported that two Chicago members of the old club met by themselves, elected officers, etc., but the Brown Leghorn breeders of America need no longer tie to a club which was organized and run by a certain few. The officers of the new Brown Leghorn Club are:

President—Fred Mott, Lansing, Mich.
Eastern Vice-President—W. W. Harrington, West Newton, Mass.

Western Vice-President—J. A. Bailey, Denver, Colo.

Northern Vice-President—H. C. Meatyard, Minneapolis, Minn.

Southern Vice President—E. E. Carter, Knoxville, Tenn.

Central Vice-President—J. R. Hill, Urbana, Ohio.

Secretary-Treasurer—C. A. Dutton, Pine Grove, Pa.

The club has offered a set of five special ribbons at some twenty leading shows this winter, besides offering twelve extra special annual meeting ribbons and four cash specials at Chicago, Jan. 25. Club membership fee, \$1.00. Every breeder who is not now a member should join at once. For application blanks, write to C. A. DUTTON, Secy-Treas.

Pine Grove, Pa.

PEDIGREE.

Good fowls from poor stock are not worth much as breeders. Good fowls of known ancestry are valuable to breed from in the proportion as their ancestors were continuously uniformly good when their progeny were measured by the standard and found fit. The important thing to know is, how like they were to the desired type; if they differed, where.

THE HEN.

Dear Reader:—Allow me to say at the beginning that I am not writing for the benefit of the experienced senior in the poultry business, but to the beginner or the amateur, and as such they must or at least they should know something about the formation of the creature with which he is so closely connected.

I will choose for my subject the "Hen." She is that being which is more commonly known to the average man than any of his other animal associates, and yet he has given her the least attention.

Strange it may seem, yet she belongs to the animal kingdom and in some respects is the most highly specialized of the Craniata. In her formation the hen is more closely allied to the reptile than the mammal. And I am induced to wonder if that is not why she prefers the shell of the oyster to surround, preserve and protect her offspring, while it is in its earliest stages of regeneration.

The hen is an air-breathing, egg-laying, warm-blooded, feathered vertebrate, with two limbs for perching or walking, and two limbs for flying. Her skeleton is more compact than those of the reptile or mammal, while at the same time it is lighter and the bones are harder and whiter.

The wings and legs of the hen are fitted for flight. Her legs are especially fitted for progression such as walking, hopping, running and also for perching and grasping. The thigh is so short that the knee is never seen outside of the plumage. The heel being the first visible point.

The toes which are four in number, always end in claws. Several years' experience as a breeder have taught me that the S. C. Brown Leghorn will use the latter most vigorously, if you doubt this, just give her a trial at your lettuce bed next spring.

I shall endeavor to describe her head, in which she has neither lips nor teeth, epiglottis nor diaphragm. The teeth are wanting because a heavy masticating apparatus in the head would prevent flight. The lips are also wanting. How often we hear the remark, "I wish I could fly like a hen." Now think which would you rather be, lipless, kissless, flying or loving, passionate human being.

Now since I have attempted to describe the skeleton of the hen and as I have said in the beginning, I was writing to the amateur, I would like to state what I consider a safe method of feeding the hen, so that good results may be obtained. Or in other words a method which I have used with great success.

That is corn in the morning, mixed grain at noon and a mash food consisting of wheat, bran and cooked vegetables. She should also be well supplied with shell, grit, charcoal and a limited amount of green-cut bone and beef scrap. Eggs produced from this ratio will be sure to satisfy the most delicate appetite.

CLARENCE C. HARTUNG.
Evans City, Pa.

Thomas Frazer, manager of the Union Cold Storage Co., Montreal, Canada, after a careful series of experiments, figures it out that the gross revenue from hens is over five times greater than that from the cow.

YOU WOULDN'T BE LOUSY WHY LET YOUR BIRDS?

TRIUMPH LICE REMEDIES are so easily applied, so effective, and yet so harmless, that there is little excuse for your fowls and your purse to suffer from the ravages of lice. Positively does not soil the plumage of white birds.

DON'T BURN MONEY

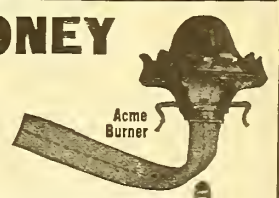

SAVE HALF

and get more heat and better light, by using

ACME SPECIAL BURNERS

Acme Trip Burner

Acme Gas Burner

Made in two sizes, No. 1 and No. 2. The No. 2 will make more heat and light than any No. 3 burner, and use 20 per cent less oil. The **Acme Trip** burner saves 1/2 the oil for incubator use, because regulator turns flame up or down as needed. Can't over-heat or char the wick. The **Acme Wick** requires no trimming, is special close woven and twice as thick as other wicks, and encased in seamless metal tube with composition burner tip. As the oil passes through this composition, it is purified and converted into gas, burning with an intense heat and a brilliant light.

NO SMOKE - NO SOOT - NO OFFENSIVE ODOR

These wicks are for the **Acme Burners** only, and will last from 30 to 60 days for Incubator use and 12 to 18 months for ordinary house use. **Acme Burners** fit any lamp. Give size of lamp collar when ordering. The **Acme Automatic Gas Valve** saves 75 per cent of gas for incubator use, because the regulator turns the flame down or up as needed. Burner tip can be located any distance and in any direction from the valve. For instance, burner can be placed under brooder hover and the valve remain on outside where it can be readily connected with regulator. Price of **Acme Burner** with wick, either size, pre-paid, 75c. Price of **Acme Trip Burner** with wick, either size, pre-paid, \$1. Price of extra wicks, either size, pre-paid, 10c each, 3 for 25c. Send for our complete catalogue of the **Acme Compound Regulators, Acme Automatic Lamps**, showing our latest combined damper and flame regulation, **Incubator Fixtures**, including the famous

PEDIGREE BREEDING

For the Fancier and Utility Breeder.

The breeding of pure bred poultry in its best form is becoming more and more of a science every year, and breeders are practicing more care in the selection and mating of their best specimens than ever before. Many of the best and most successful fanciers are breeding only one or two hens in a pen, so as to keep the eggs separate and keep a pedigree of their best chicks, but this requires too much room for most breeders to follow, and the result is many breeders are not getting the full benefit of some of their best breeding birds. They realize well the advantages of an accurate pedigree system in the production of the highest uniform quality, but for some reason continue on in the same old way of breeding from pen matings and the result is they are unable to tell which of their females are producing their best chicks from year to year. Progress under such conditions is necessarily slow, but this method of breeding is no longer necessary no matter how limited the fancier finds himself for house room. The trap nest now enables him to mate up his regular breeding pens and yet keep each one of the hens' eggs separate for pedigree purposes. The style of nests now in use on my farm meet all the requirements of a simple practical and accurate trap nest. I use a common cracker box stood on end for the nest proper, and for the front of it I use the "Ideal Trap Nest" attachments, manufactured by F. O. Wellcome, Yarmouth, Me.

With four or five of these nests in a pen for eight females, I am able to keep each hen's eggs separated, so I can breed from any one or all of them and know just which hen is the mother of every chicken. For the benefit of those beginners who have had no experience with trap nests, and from the letters I

and crude have been the inventions placed upon the market for that purpose, but few having stood the test in practical work. The nests I am using work automatically, opening to admit the layer and closing and locking when she has entered. She is thus unable to get out until I open the nest for her and no other hen can unlock the nest to get in with her. When I release the hen that has laid the egg, I mark her leg-band number on her egg and in this way am able to keep each hen's eggs separate. When I have saved ten or twelve eggs from a hen I want to breed from, I set them in a nest by themselves and place no other eggs with them. Then when the chicks hatch they are marked with a small toe punch in the webs of their feet, and these marks recorded in a mating book. Thus each chick can be identified and its mother as well as its father known even when the hens are all bred in the same pen.

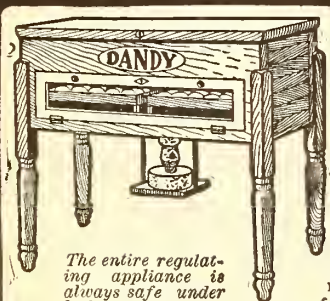

The greatest claims of the trap nest advocates have been along the lines of the benefit derived in picking out one's best layers, by keeping individual egg records of the hens and the advantage is great, but the greatest value of the trap nest lies in its use in keeping pedigree of the chicks from one's choicest breeding females. With an accurate pedigree system of this kind, the fancier increases many times his chances of success, and whether he is breeding for show birds, or layers, or both combined, he has a knowledge of the breeding value of his best birds that makes him practically master of the situation and eliminates largely the possibilities of mistakes and disappointments in the

receive, I guess there are quite a few of them, I will say, trap nests are made for the purpose of trapping the hen when she enters the nest to lay. Many

The entire regulating appliance is always safe under lock and key.

Aren't They DANDYS

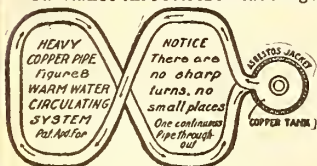

We hear this expression every day from delighted owners of **DANDY INCUBATORS AND BROODERS**. Of course there are good reasons for this enthusiasm; poultry people don't give taffy; a machine must **make good** before they will endorse it. Most purchasers expect more of a machine than it can accomplish. **DANDYS**, therefore, must more than make good our claims to win so many warm friends. Let us list just a few of the features that make

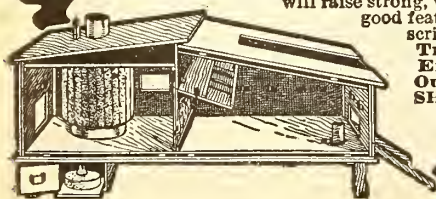

Utilizes all the lamp heat and requires very little oil to operate.

THE DANDY INCUBATOR

the most effective hatching apparatus ever built. It is the only incubator with heavy 3-in. walls—the lining being **Soapstone**—a substance that retains heat longer than any other material ever used for such purpose. Controls the temperature of the heated air within the heater itself. Spreads the heat equally to all parts of the egg chamber. May be quickly taken apart for cleaning heater and nursery. Does not require a specially constructed cellar to keep up the required temperature. Ventilating system furnishes each and every egg with pure air and oxygen. Perfect automatic moisture supplying device and warm water circulating pipe system. Is simple, practical and up-to-date in every detail—an incubator that will hatch every fertile egg. It embodies a lot of other improvements we would like for you to know about—all explained in our elegant new catalogue.

beats the old hen way of raising chicks. That's what they are built for. They never get tired or careless, don't trail the chicks through the wet grass, or trample them to death. Are the result of years of practical experimenting by a practical poultryman. Built throughout of the best grade of white pine and galvanized iron—the roof of the outdoor style also being made of galvanized iron. Heat is supplied by our own double brass bowl water jacket safety lamp, which is very simple and may be quickly removed. The outdoor brooder is a combined indoor and outdoor brooder and colony coop. Brooders are all large in size and contain 28 sq. in. floor space for each chick. They hover chicks same as nature; do not cause crowding in corners or produce bowel trouble or leg weakness. Can be instantly folded up either for shipping, storing or cleaning. Fastened together with long iron bolts from side to side instead of nails or hooks. Are stairless and furnish a safe, snug, sensible, sanitary chick shelter that will raise strong, vigorous birds with very little work and practically no loss. We tell you more of their good features in a new free catalog that will be worth money to you. It illustrates and describes the best line of **Portable Poultry Houses, Egg Trap Nests, Colony and Chick Coops, Folding Exhibition Coops**, etc., ever built, and explains **Our Free Trial Plan and \$1000.00 PROFIT SHARING CONTEST**. Reward will be paid to any person who can find one atom of opium, chloral, morphine, cocaine, ether or chloroform in any form in any of Dr. Miles' Remedies.

This reward is offered because certain unscrupulous persons make false statements about these remedies. It is understood that this reward applies only to goods purchased in the open market, which have not been tampered with in any way.

Dr. Miles' remedies cure by their soothing, nourishing, strengthening and invigorating effects upon the nervous system, and not by paralyzing and weakening the nerves as would be the case if these drugs were used.

For this reason Dr. Miles' Anti-Pain Pills are universally considered the best pain remedy

"I have suffered for 25 years with severe pains in my head, heart and back, and have tried everything I could get and could not find any relief until I got a box of Dr. Miles' Anti-Pain Pills. I suffered as long as 12 hours at a time with such severe pains that I feared I would lose my mind. The Anti-Pain Pills gave me relief in from 10 to 20 minutes. I do not have to use Morphine any more. I wish you would publish this so that other sufferers may find relief."

matings and the results obtained from them.

With the advent of accurate and practical trap nests and pedigree breeding, the conviction is growing in the practicableness of combining the highest uniform quality of both utility and beauty in the same strain of fowls. I have always been at a loss to understand exactly why there ever should have been any question as to its being practicable to breed the best quality in Standard points, and the persistent laying habit into the same strain of fowls.

There is no question but that it is easier to accomplish one's object, if one confines themselves to a single line of work. The breeder who makes egg production his one aim, or the fancier who works first, last and all the time for fancy points and winning quality, will no doubt, be able to reach the object in view with less trouble than the man or woman who attempts to produce both the fancy points and the best business qualities in the same strain, but who will deny that after all the breeder who enjoys solid satisfaction is the man or woman who produces the stock that has both the winning and laying qualities combined. Our most conservative breeders and fanciers believe the time has come when more attention must be given to the practical money earning qualities of pure bred poultry. If this is done, slipshod methods will have to give place to accurate systems of pedigree breeding, in no other way can substantial progress be made.

The greatest milking strains of pure bred cattle and the best draft and driving horses in the world today are the product of careful selection and pedigree breeding for generations, and by just such a system will the highest uniform excellence be produced in pure bred fowls. There are hens in every flock that are much better layers than the majority of the flock, and if the best of these were selected for breeding purposes and a pedigree record of their chicks kept, using the cockerels which showed best quality in size, shape, color and other standard points for breeders, the persistent laying habit could be bred into any strain of fowls in a few years without impairing their show quality. Continual selection in this way will produce a strain of phenomenal layers just as surely as the same system of selec-

tion and pedigree breeding is producing cows which are phenomenal producers of milk and butter.

Every fancier should be able to keep an accurate pedigree of his chickens, even if he care for nothing but the fancy side of the question, for only by such a system can he make the best use of the stock he raises each year in mating up his breeding yards for the following season. An accurate knowledge of the breeding value of each individual hen is worth all the time and labor it costs to any man or woman who is working to produce quality.

Trap nests and pedigree breeding are not fads, they have come to stay and every year will find more of the best fanciers and breeders using some such system to give them an accurate knowledge of just which females in their yards are producing their best birds and which hens it is that are giving the unsatisfactory results. The possibilities of pure bred poultry breeding along the combination of the fancy and utility lines is far beyond the thought of the majority of breeders and fanciers. Where a correct system of selections and individual matings is followed up for a term of years, a uniform quality is attained which makes a strain of fowls exceptionally valuable as breeders, and makes progress along both the fancy and utility lines a practical certainty each successive season. Under the most favorable conditions and with the best and most carefully followed systems, progress is slow enough, and no aggressive breeder to-day can afford to ignore any system which will give him added advantages in producing the best specimens of his variety.

Nothing will contribute more to any breeder's success than the knowledge of the breeding value of their fowls which they can obtain by the use of trap nests and a pedigree system.

AMERICA'S LEADING WINNERS HATCHED IN CYPHERS INCUBATORS. READ THIS SEASON'S EVIDENCE.

WORLD'S FAIR, 1904.

"All our Buff Orpingtons that won at the World's Fair, St. Louis, October 24 to November 5, 1904, were hatched in Cyphers Incubators. At this great exhibition we won seven out of a possible ten firsts, as follows: Single Comb Buffs—First and second cocks; second cockerel; first and second pullets and first pen. Rose Comb Buffs—First cock; second and third hens; first cockerel; first and second pullets and first pen."—J. M. Williams & Co., Box D, North Adams, Mich., December 6, 1904.

BOSTON, 1905.

"Every bird I exhibited in Mechanics Building, Boston, Mass., January 17-21, on which I won a prize, was hatched in Cyphers Incubators. At this show I won on my S. C. White Leghorns 1, 2 cocks; 1, 2 hens; 1, 2 cockerels; 1, 2 pullets and first exhibition yard."—D. W. Young, Highland, N. Y., February 1, 1905.

BOSTON, 1905.

"A majority of my prize-winning Rose Comb Black Minorcas at Boston, January, 1905, including several winners of first prizes, were hatched in my Cyphers Incubator. At this exhibition I won, 1, 2 cocks, 2, 3, 4 and 5 hens, 1, 2, 4 and 5 cockerels and 1 pen."—Geo. H. Northrup, Raceville, N. Y., Jan. 20, 1905.

WORLD'S FAIR, 1904.

"Every bird I exhibited at St. Louis was hatched in a Cyphers Incubator. On these birds I won special first prize for best display; also second, fourth, sixth and seventh cocks; first, third and sixth hens; fourth cockerel; second, fifth and seventh pens; also the most coveted of all prizes at this great show, viz., special first prize for best display, besides nine other special prizes. I wish to add several more of your incubators for next season's hatching. Kindly send me your 1905 prices."—U. R. Fishel, Hope, Ind., December 10, 1904.

NEW YORK, 1905.

"Our Buff Orpington cock bird that won first at Madison Square Garden, 1905; also our third prize cock bird were hatched in one of your 120-egg incubators in England, and our first prize Black Orpington pullet at the same show was hatched in one of your machines in this country. Our first prize White Orpington cockerel, first prize Jubilee Orpington cock and first prize Spangled cock bird, all winners at Madison Square Garden, 1905, besides many other winners at other shows, also were hatched in your machines."—Wm. Cook & Sons, Scotch Plains, N. J., Jan. 21, 1905.

CHICAGO, 1905.

"It affords me satisfaction to inform you that the first prize breeding pen, first cockerel and second pullet at the last Chicago show in the R. C. Black Minorcas, were hatched in a

Cyphers Incubator and raised in a Cyphers Brooder. The cockerel weighed 8 lbs. and the pullet 6 3/4 lbs., when they started for the show. This pair of prize winners represented the largest and most vigorous birds I have ever raised. All my show birds in the future will be hatched and raised in your machines."—S. T. Campbell, Mansfield, Ohio, Jan. 30, 1905.

CHICAGO, 1905.

"A large percentage of our prize-winning Golden Wyandottes at Chicago, January, 1905, and at the World's Fair, St. Louis, October 24-November 5, 1904, were Cyphers-hatched chicks. At Chicago we won 1, 2 and 5 cockerels, 4 hen, 2 pullet and 2 pen; at the World's Fair, 4 cock, 4 cockerel, 1 and 3 hen, 5 pullet and 4 pen."—B. F. Hislop, Milford, Ill., January 31st, 1905.

NEW YORK, 1905.

"It affords me pleasure to state that my first prize Black Minorca cockerel and pullet, first prize White Plymouth Rock cock and cockerel (weight 12 1/2 lbs.) and first pen at the late Madison Square Garden show, were hatched in Cyphers Incubators, raised in Cyphers brooders and fed exclusively on Cyphers Chick Food, and their home from brooder to winter quarters was a Cyphers Colony House. They even drank their water from Cyphers drinking fountains."—John H. Santee, Grey-stone Poultry Farm, Yonkers, N. Y., January 24, 1905.

The Foregoing

are but a few among many similar reports we have received and that appear in our **Free Printed Matter**. Let us merely emphasize the further fact that if **Standard Cyphers Incubators** will hatch the **first prize winners at America's Greatest poultry shows**, they will hatch market poultry equally well for the farmer and villager—for the practical poultry raiser everywhere. **Not only "Quality," but "Quantity"** also will result from your use of the Standard Cyphers. Again we say, **Read the Evidence** in this case, not from poultry fanciers, but

From Farmers and Farmers' Wives:

"My banner hatch was 345 chicks out of 360 eggs."—J. F. Ramsey, Mortonville, Pa.

"I got 305 chicks out of 313 fertile eggs."—Edward Sharpe, Genoa, New York

"From 360 eggs we have hatched 317 of the brightest, and strongest chicks I ever saw."—Frank B. Taylor, Prompton, Pennsylvania,

"I hatched as high as 314 chicks out of my 360 egg Cyphers."—Herman Friedl, Haskell, Ind.

"We obtained today 327 strong, healthy chicks from the 360 egg Cyphers."—Sprague Bros., Florence, Ohio.

"I have a Cyphers Company 120 egg Incubator in which I hatched, last spring 101 chickens from 105 (untested) eggs."—Mrs. Joseph Yuill, Carleton, Ontario.

Grant M. Curtis,
President.

Cyphers Incubator Company

BUFFALO
N. Y.
U. S. A.

Branch Houses From Ocean to Ocean.

Goods Sold by More Than 6,000 Dealers.

Eight Years of Triumph in the hands of men and women in all walks of life, under all conditions and in every civilized country on the globe, prove beyond question the **STERLING MERIT** of the **Standard Cyphers, Patent-Diaphragm, Non-Moisture, Self-Ventilating and Self-Regulating Incubators**. Do not be deceived by false claims! Remember that the really salient features of our Standard machines are protected by Letters Patent. Beware of inferior imitations and **UNLAWFUL INFRINGEMENTS**. Buy the genuine made only by this Company bearing our registered trade-mark, covered by our guarantee of "personal satisfaction" and sold at our six places of business (see addresses) and by this Company's authorized agents. **LOOK FOR THE TRADE-MARK;** it stands for "Genuine" and means Certainty, or your money back.

Need We Say More? Yes, **THIS:** That notwithstanding the fact that our 1905 pattern Standard machines are much improved over the older styles (for particulars see our January and February advertisements in this Journal; also pages 15 to 43 of 1905 catalogue,) the prices for these "World's Standard Hatchers" have been considerably reduced, as the result of important savings accomplished in their manufacture by an increase of capital, the introduction of labor saving machinery and a greatly enlarged output. For the season of 1905, regardless of consequences.

Our \$14, 60-egg size incubator will be sold for	\$12.00.
Our \$20, 120-egg size incubator for	- - \$17.00.
Our \$29, 220-egg size incubator for	- - \$24.00.
Our \$37, 360-egg size incubator for	- - \$30.00.
Our \$58, 440-egg size double-decker for	- - \$48.00.
Our \$78, 720-egg size double-decker for	- - \$60.00.

In addition to the foregoing we are offering for 1905 two special low-priced incubators at \$10.00 and \$6.50 each, respectively; the **Farm-Economy** (100-egg capacity) and **"Boy's Choice"** (50-egg capacity,) also two new styles of outdoor brooders, the **Storm King**, in two sizes, which sell at \$6.00 and \$8.00 each, holding 50 and 100 chicks respectively, and a new indoor brooder, the **Hare-Curtis Hygienic**, a new departure in brooder construction that we believe will prove a great boon to poultrymen.

PEA-GREEN ALFALFA, Richest in Protein! The Early Green Food!!

Our new poultry food, clover and alfalfa mill at Kansas City, Mo., (the largest of the kind in the world—30,000 square feet of floor space: capacity four cars daily) is now in full operation and car loads of pea-green alfalfa in three forms, **short-cut, shredded, and meal**, are in stock at our six places of business, **ready for prompt shipment**. These goods are sold in sealed bags only, each bag bearing our trade-mark. Prices: Short-cut and shredded, 100 lbs., \$1.75; 50 lbs., \$1.00. Meal, 100 lbs., \$2.00; 50 lbs., \$1.10. All f. o. b. cars New York City, Boston, Buffalo, Chicago or Kansas City. Samples by mail, **free** on request. Address nearest office.

CYPHERS CHICK FOOD

A complete, ready mixed, balanced food for little chicks,

furnishing every element needed to properly nourish and rapidly develop bone, flesh and feathers. Our motto: "Quality first; price as low as we can make it". The extraordinary cost of wheat and other grains the present season positively will not affect either the quality or price of our trade-mark brand of chick food: **On this you can rely**—Cyphers Chick Food is today the **Standard**, and we shall keep it so despite the present high prices of grain.

THIS IS THE YEAR when poultrymen will profit greatly by our resolve to **keep up the quality and keep down the prices** of all our poultry foods. The cost of wheat, for example, is nearly twice what it was when the prices of these poultry foods were fixed four years ago, but the establishment of our large and perfectly equipped poultry food and alfalfa mill at Kansas City, Mo., the **chief primary grain market of the world**, the use of special machinery installed at heavy cost and the shipment of goods in car lots at lowest freight rates, have enabled us to partly offset the large increase in the prices of raw materials and thus keep the quality the same, (as a matter of fact we have improved it) and to still sell at the same prices as heretofore. **On your part we ask that you do us the justice to compare our chick food with others on the market—not with samples, BUT WITH ACTUAL SHIPMENTS.**

OUR KANSAS CITY MILL manufactures **nothing but poultry foods and clover and alfalfa products**—no breakfast foods nor ordinary stock foods. From us every customer will receive **absolutely sound, cleanly cut dust-free grains**, not by-products, waste materials and sweepings that remain after putting the better parts of the grains into other foods. We buy for this special purpose every bushel, every ounce of grains and seeds we use!! **That is why Cyphers Chick Food is the Standard.**

It makes chicks healthful; being scientifically balanced (by analysis); it aids digestion and thus prevents diarrhoea and bowel trouble.

It makes chicks grow, because it is compounded by experienced poultrymen who have spent the greater part of their lives in the business of raising chickens.

It makes chicks feather right—no ragged plumage, drooping wings and death-marked, weary-looking chicks, because the feather-making material is in this food in correct proportion. The best known and most successful poultrymen in the country now use and publicly endorse Cyphers Chick Food. This fact proves its high utility value. Here are a few brief extracts from what scores of them say:

"We hatched over 10,000 chicks. We always feed Cyphers Chick Food for the first three weeks."—Jordan Poultry Farm, Hingham, Mass.

"With your prepared foods we have no difficulty in making our chicks live and grow."—Lakewood Farm Co., Burrsville, N. J.

"All our chicks are fed on Cyphers Chick Food and we do not lose any sleep thinking how many dead chicks we will bury in the morning."—Bonnie Braie Poultry Farm, New Rochelle, N. Y.

"Fed on your chick food my birds grow from shell to show room, winning there the best prizes for me at leading shows."—Chas. V. Keeler, Winamac, Ind.

All my New York winners during the past two years were reared on Cyphers Chick Food and I shall never again attempt to raise chicks without it."—Chas. H. Welles, Stratford, Conn.

Free Samples, will be sent by mail, postpaid, to any address. Ask nearest office. Sold by hundreds of agents and dealers located in all parts of the country, many of whom buy in car lots. Write today for name and address of agent nearest you, thus obtaining the **Genuine Article** and **saving time and freight charges**. **Cyphers ready-mixed poultry foods** (Chick Food, Laying Food, Scratching Food and Forcing Food) are put up by us in **sealed bags**, bearing registered trade mark. **See that seal is not broken.** Accept no substitute. We challenge comparison and guarantee results when directions are followed. Sixteen-page booklet, entitled "Foods and Feeding" in every page telling how to feed. Please send for **free sample**, by mail, postage paid.

Six Places of Business. To facilitate the better handling of our business and to **SAVE OUR CUSTOMERS TIME AND MONEY**, we maintain six places of business, shipping to each branch house in car lots. Inquiries and orders sent to any of these offices will receive prompt attention. All goods will be **SHIPPED FROM STOCK DEPOT NEAREST YOU**, thus saving you **TIME AND FREIGHT CHARGES**.

Our 1905 Catalogue is the largest and finest book we have issued. Consists of 228 pages 8x11 inches in size. Contains six Special chapters on profitable poultry keeping. There are more than 450 illustrations, including latest portraits of 150 best-known authors, judges, fanciers, editors, professors of poultry husbandry and owners and managers of the world's largest and most successful poultry plants. One hundred and twenty pages devoted to an illustrated description of the Cyphers Company's exclusive manufactures, as named herewith. **WILL BE SENT FREE**, postpaid, to every reader of this advertisement who will send us his name and the names and addresses of two friends or acquaintances who are known to be interested in poultry for profit. Please mention this paper and address nearest office.

—o—

The Seventh Annual Meeting of the Rhode Island Red Club of America was held at the Boston Show, Jan. 19, 1905. There were nearly one hundred members in attendance, and as usual a large amount of enthusiasm was manifested.

The secretary's report showed a gain of one hundred and forty-three members since the last meeting—a gain of nearly 100 per cent. The present membership reaches three hundred and twenty-eight. During the past year the club has offered \$100 in cash prizes at St. Louis, \$60 cash and a \$25 trophy at Boston, besides over three hundred special club ribbons, placed among the representative shows from Maine to California.

Of the three thousand copies of the club catalogue, "Red Hen Tales," which were issued, twenty-four hundred have been sent out to those requesting them. Requests for copies have come from every state in the Union, from various parts of

Canada, from South America, Germany, England, and Australia.

After accepting the secretary's report the club expressed in a very hearty way its thanks to Hon. C. M. Bryant for his efforts in securing the admission of the Single Comb Reds at Rochester.

The secretary was authorized to offer cups to be competed for by members only, in the various states where there are ten members—the honorary vice-president for the state to be consulted about the place where the cup shall be offered.

All the 1904 officers were re-elected by acclamation with the exception of the vice-president from Kansas, Dr. J. Martin, whose resignation was received and accepted, and in his place William Munroe, Florence, Kan., was elected.

Paragraph Two of Section Eleven of the By-laws was changed to read: "Members six months or more in arrears shall be dropped from the membership roll after having been duly notified by the secretary."

The advisability of holding the annual meeting of the club at some place other than Boston was discussed and the general feeling was that if it could be made possible to have a meeting in the West, which would be representative, it would be advisable. About 75 per cent of membership is now in New England, but the West is giving us a great many new members. The prominent breeders have heretofore been in the East, but we now have good Reds in nearly every state in the Union.

It was thought best to encourage local sections of the club to hold meetings in each state where cups are offered.

ORPINGTONS BUFF, BLACK, WHITE 12 firsts and silver medal at late December 1904, and Jan., 1905, Chicago shows, where the finest birds in the States were shown. Two select matings in each variety. The cream of our winners and selection from 600. EGGS (positively our very best) \$5 per 15, \$9 per 30, \$16 per 60. All infertiles replaced free. Don't be deceived by the high sounding claims of others. We can and will furnish you as fine eggs as money will purchase. Eggs from carefully mated pens of Buff Orpingtons \$2 per 15, \$10 per 100, \$90 per 1000. C. S. BYERS, Box A, Hazelrigg, Ind.

GREYSTONE POULTRY FARM

YONKERS, N. Y.

White Wyandotte Eggs

From the "Original World's Best" Strain

of J. C. Fishel & Son

Now is the time to buy eggs. Prices on eggs. Prices \$5 per setting of 15 eggs, of 50 eggs for \$15, selected from that yard. Now if you wish eggs from a special yard the price is \$10. See catalogue. We can ship eggs any distance with perfect safety and guarantee hatch. Our matings for this season will simply be immense—fourteen yards, and not a bird that shows a tinge of brass or straw color. They are absolutely white, stay white, and are all winners. Note our winnings in catalogue, and also our last show of 1904; is not that proof of our claim, "THE WORLD'S BEST?"

At the Indianapolis State Poultry and Pet Stock Show, 1904, winning seventeen prizes out of twenty-one entries, besides \$25 silver cup given by White Wyandotte Club for best display; W. Wyandottes and many other specials: 1, 2, 4 cocks; 1, 2, 3, 4 cockerels; 1, 2, 4, 5 hens; 1, 2, 4, 5 pullets; 1, 2, 3 pen. Now is not that convincing evidence that Fishel's Strain of Stay White Wyandottes are the original world's best? If your stock lacks in head points, pureness of color, or the typical Wyandotte type, you should certainly improve your stock. This you can do by making a small investment in eggs with us.

OUR GUARANTEE: We guarantee nine chicks to each setting of fifteen eggs, or if the purchaser fails to get this per cent, we will duplicate the order at one-half price. We feel that any of our customers having the confidence in us to place their orders with us, we should have equally as much confidence in them to take their word for report of hatch, hence this proposition.

Send for catalogue or order direct from this ad.

J. C. FISHEL & SON

Box J, Hope, Ind.

The executive committee was instructed to issue a new catalogue and the sense of the meeting was that every member should make every possible effort to swell the membership roll as well as the advertising pages. The 1904 catalogue has proved a very valuable advertising medium, since it reaches the most desirable class. The co-operation of every earnest breeder of Reds is solicited.

W. J. DRISKO,
Secretary and Treasurer.
Somerville, Mass.

Booneville, Mo., Feb. 19, 1905.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir: We noticed a short article in your last issue about shipping coops, and it occurs to us that a number of fanciers (?) need stirring up on this feature of the business. Probably the worst shipping coop or box we ever saw arrived at our office several weeks ago. The box contained two buff turkeys and one buff male bird. The box was 30 inches long, 18 inches wide and 17 inches high, outside measurement. One end was partitioned off for the turkeys. This shipment came from Ohio and was probably cooped up for more than 48 hours in a box about half as large as it should have been. We don't believe that a man can be a true fancier who will be so cruel as to crowd birds as these were, and the express companies should refuse to accept such shipments. Shipping coops should always be high enough to allow the bird to stand and wide and long enough to avoid crowding. When

Have you a bottle in the stable?

Pratts Distemper Cure.

Made by Pratt Food Co., Phila. Over 30 years old.

a customer orders a bird he has a right to expect that it be sent him in a decent and humane manner. For a single Langshan we coop in coops 22 to 24 inches high, 11 inches wide, 22 to 24 inches long. We use a slat coop (slats not less than three inches apart), covered with muslin. In cold weather we first cover with two or three thicknesses of paper before tacking on the muslin. Put a thin muslin (but no paper) over the entire top. This keeps out drafts and keeps the bird's head in and gives plenty of ventilation.

CHAS. G. MILLER & SON.
Boonville, Mo.

THE INTERNATIONAL BANTAM BREEDERS' CLUB.

The International Bantam Breeders' Club met on January 27th at the Coliseum during the Chicago show. At this exhibition the club offered several silver cups and a large number of cash specials to members, both of which drew out a highly meritorious class of bantams. At the annual meeting of the club Mr. E. J. W. Dietz, Downers Grove, Ill., was elected President and Frank W. Radford, Oshkosh, Wis., was elected Secretary and Treasurer. The next meeting of the club will be held with the Chicago show during the last week in January, 1906.

The International Bantam Breeders' Club is organized for the purpose of encouraging the breeding and exhibition of all varieties of bantams. At the club show a handsome array of special prizes are offered, and in each state where there are ten members a silver cup is offered by the club at such show as the members in that state may select. An active campaign has been begun by the

secretary in securing members for this club, and everyone interested in the little birds and their advancement should write him for complete information and application blanks. The initiation fees and first year's dues are \$2, payable in advance.

Any breeder who joins this club will not only benefit himself directly, but will make it possible for the club to interest others in the breeding of bantams. This will, of course, be an indirect benefit to all. You will be conferring a favor upon the secretary and the club if you send the names of other breeders of bantams who would like to receive full information when you send in your own application.

FRANK W. RADFORD, Secy.
Oshkosh, Wis.

EARLY HATCHING.

The proverbial saying that "the early bird gets the worm," is nowhere more plainly verified than in hatching chicks. Early hatching requires fewer eggs to get the desired number of chickens. Early hatched chickens are always more thrifty, make best show birds, find readiest sale on provision markets, as well as on the fancy market; lay first and best and bring forth better offspring.

Quincy, O. M. E. SULLIVAN.

A cheap and effective lice remedy is said to be a pound of moth balls dissolved in a gallon of kerosene, and applied to the roosts once a month.

Sales stables use Pratts Heave Cure. It must be good.

Made by Pratt Food Co., Phila. Over 30 years old.

Something
New

Strathmann's Poultry Yard Seeder

A machine any one that keeps a dozen chickens ought to have. The extra profits of same will pay for seeder in 1 year. Its weight is 30 lbs., sows 2 rows 10 ins. apart and cultivates your ground. Will do what all poultrymen and journals say, keep your chickens scratching. Our seeder has proved itself a winner at the Chicago poultry show by having a larger attraction than any other exhibit. Simple, durable and practical; can't get out of order. Any boy or girl can operate it. Send for circular.

Strathmann Mfg. Co., 140 E. Fullerton Ave., Chicago, Ill.

Here's the Answer

The Gem Incubator is a thoroughly reliable hatching machine. It is constructed in the most approved, substantial manner. It embodies features that make it the easiest and simplest machine to operate on the market. Thousands sold, and every purchaser has only words of praise for the Gem. Our catalogue is full of answers to every question. But the feature we like to emphasize most and that puts the

GEM INCUBATOR

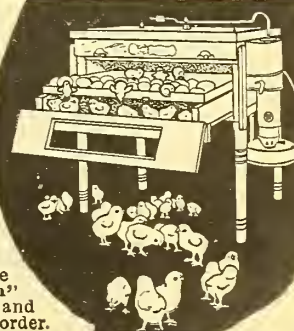

in a class by itself and above all others is the Removable Chick Tray and Nursery, which can be entirely removed from the machine for transferring chicks to brooders, and enables you thoroughly to dust machine without getting on your knees and reaching at arm's length back into the egg-chamber to do it.

No other incubator has this handy feature. When you fully appreciate the advantages of this one improvement it will be "reason enough" why you should buy the Gem Incubator. Write for FREE catalog and learn all about the removable chick tray and nursery before placing your order.

REJUDGING THE SHOW.

We are not altogether in favor of editors rejudging the shows. However, they should not print matter that would be misleading to the buyer. For instance, Mr. So-and-So wins first honors on a bird that would not honestly score better than 85 points. Should the editor hold him up to the readers of his paper as an acceptable specimen for his customers to patronize? When the buyer is once led astray he ceases to have faith

in the journal, and the editor in shielding his customer has harmed himself.
Batavia, O. MRS. J. H. OREBAUGH.

CLEANLINESS.

You have no doubt heard of the man who took a bath once a year whether he needed it or not. Do not clean your hen house this way. Clean it often. It is worth the trouble just to see the fowls enjoy it. When I clean the dropping

boards I cover them with ashes. This answers several purposes. The fowls enjoy picking the charcoal from it while it is clean. It helps to remove the next lot of droppings, keeps the boards sweet and clean and helps keep lice away. Be sure there is no fire in the ashes.

Eggs For Hatching

FROM PRIZE WINNING
SINGLE COMB WHITE LEGHORNS

Exhibited at Madison Square Poultry Show, New York City.

AGAIN we were prize winners at the 1905 Poultry show in New York. At the Coliseum, Chicago Poultry Show, we were successful, winning the following prizes: 1st and 5th cock, 1st and 4th chl., 2d and 5th hen. All of our prize winners were from our own stock. We shall have eggs for hatching for sale from these prize winning matings. If you wish to breed prize winning stock, write us at once, and get prices of eggs for hatching from these special pens.

Eggs for hatching from special mated pens of heavy egg producing strain, \$2 per 15, \$5 per 45; \$8 per 100, \$70 per 1000.

CHOICE BREEDING COCKERELS

We have for sale about 200 extra choice breeding cockerels at very reasonable prices. These birds have particularly fine plumage, carriage and head points. Their ancestors for generations have won prizes in all the shows in the United States. On request we will mate up for the purchaser trios or pens, which will produce the very best results. If you need birds for breeding or eggs for hatching, write us at once for description and prices.

WHITE LEGHORN POULTRY YARDS CO., Box 525, Waterville, N. Y.

THEY CAN'T BEAT THE "HAWKEYE"

Write for
FREE
Catalogue

FOR fifteen years manufacturers of incubators have been trying their best to beat the "Hawkeye," but so *broad* and *basic* are the exclusive patents on which its superiority rests, that they haven't yet built an incubator that will *equal*, much less *excel* it, and in our opinion they never can. We have always kept in the lead in the matter of improvements. Our "Hawkeye Special," which we show in the accompanying illustration, has every improvement and every device that adds value to an incubator, and it gives better results than any other make of incubator on the market at any price. Here's our advertising introductory offer—the best proposition on a high grade incubator that any reliable company has ever made. We will ship you on

**WE HAVE A QUICK
DELIVERY PLAN.**

30 DAYS FREE TRIAL The "Hawkeye" Special Incubator

of 100-egg capacity—on the results of the trial we cheerfully rest our case. We do this because we want you to *see* and *know* that the special features we claim for the Hawkeye are genuine points of superiority. Here are some of the *unique* and *valuable* features of the *Hawkeye*—the foster mother of millions of healthy chicks: Simplicity of design—substantial construction, of the very best materials. Finished like a piece of fine furniture. Ventilation system that solves the all-important questions of moisture and evaporation. Hot water pipe 12-oz. cold-rolled copper heating system that maintains an even temperature—no cold corners. Automatic Regulator, of absolute accuracy. The Hawkeye Special Safety Lamp, Heat Deflector, Thermometer, and other devices give the finishing touches of perfection to this splendid incubator.

215 Chicks from 215 Eggs.

Hawkeye Incubator Company.

Gentlemen—I enclose fifty cents, for which send me one incubator thermometer, and if this is not enough I will send the rest as soon as I hear from you. In my last hatch from the 240 egg Hawkeye I took off 215 chicks from 215 eggs. Wasn't that good? Send the thermometer at once and oblige.

Yours respectfully,
MRS. D. C. JOHNSON, Maxwell, Ia. July 1, 1904.

Hawkeye Incubator Company.

Gentlemen—You will probably remember that I purchased a 50-egg incubator of you last April. I find the machine is shelling out the chicks so fast that I must have a brooder, so quote me the best price for a machine to correspond in size. I had three hatches in the incubator, which were as follows: First, 50 eggs, 46 chicks; second, 51 eggs, 47 chicks; third, 50 eggs, 49 chicks. Yours very truly,

ALVA HARDY, Blandinsville, Ill., Oct. 24, 1904.

Are You Open to Conviction? Then let us send you the Hawkeye Special, the pride of our establishment, together with our Complete Hawkeye Instruction Book, telling how to operate the machine and giving invaluable information on how to make money in the poultry business. The Hawkeye Special will please you. A trial hatch will show you it's a profit-maker. Puts money in your pocket every day you keep it busy. Write for 30-day free trial plan—will you?

HAWKEYE INCUBATOR CO., Box 2, NEWTON, IOWA.

A "DANDY" PLANT.

The above illustration is a splendid representation of the new plant of the Dandy Poultry Novelty Co., of Danville, Ill. About four months ago this company was organized by Dr. A. F. Meserve and a number of capitalists of Danville to manufacture on a large scale the incubators, brooders and other poultry appliances which Dr. Meserve has been making on a small scale for several years.

The success of these machines has been so great and they have become so popular among poultry people that this move was made necessary to meet more fully the demand, which the doctor with his limited facilities could not possibly supply. The company writes us that they have a corps of well-trained, skilled workers in every department and that they are able to handle all orders promptly, making everything in their own factory.

The main building is 60x150 feet, with a 40x40 foot boiler room, both of brick. The frame portable house addition is 50x75 feet. Experimental shed is 14x16 feet, with 8-inch packed walls—the entire floor space of the plant being 38,000 square feet. Factory is large, light and commodious and supplied with the latest machinery for the quick handling of all work. Power and electric light is furnished by their own 100 horse-power engine, twin boilers and dynamo. Surrounding the plant are several acres of ground for lumber, sheds, etc. The location of this plant is ideal; about half way up the hill back of the factory are a number of springs of pure water. The larger one of these gives a solid 4-inch stream of water, winter and summer, and has done this as long as the oldest inhabitant can remember. Part of this water is piped throughout the entire factory. Not far from the factory are the soapstone quarries, from which the stone is procured that is used in lining Dandy incubators.

Our readers will do well to read the advertisement of this company in another

part of this paper and write for their new catalogue. In it they give full explanation of a free trial plan and a \$1,000 profit-sharing contest that ought to interest every chicken crank in the land.

BROODER FACTS.

A million incubators are now at work or will soon be, and then there ought to be a million brooders busy housing and bringing on to healthy maturity the hundreds of millions of young chicks. But—

How strange it is that so many people will buy an incubator that costs good money, fill it with eggs that this year at least have been worth good cash and run the incubator at its necessary expense and then stop when the expenditure of a small sum additional would make more profitable all their past investment and labor. This seems a common fault. A man builds a house or barn and neglects to paint it; or he buys an expensive farm tool and lets it lie outdoors. But that is no reason why we should not show to the readers of the AMERICAN POULTRY JOURNAL a better way about raising chicks.

Our advertiser, Channon, Snow & Co., have a special proposition on a brooder that deserves the attention of every reader. You are doubtless familiar with their method for "Building Your Own Incubator." They apply the same plan to brooders. They put up a high grade set of fixtures and furnish plans which any one can follow and build a first-class brooder at about one-half the cost of brooders ordinarily. They claim for their brooder that it is larger than others. Large enough so the chicks have a chance to run and get strong. Large enough so the air is always pure and warm, too, but so evenly warm that chicks do not catch cold or die from exposure to too low temperature.

If you are interested in brooders write for their free poultry book, "How to Make and Save Money with Incubators and Brooders." It may be worth much money

to you. Write today. Address Channon, Snow & Co., Dept. C, Quincy, Ill.

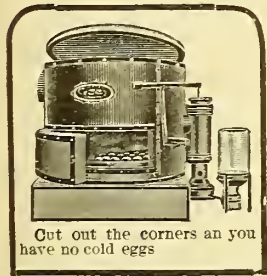

GOOD LOOKS.

Take care of your face. Personal appearance makes a big difference in your chance for success. It is not necessary to be handsome, but nobody likes to look at a face that is irritated and broken out. There would be less face trouble if every shaver would use real shaving soap, made especially for this purpose, instead of laundry or toilet soaps. The J. B. Williams Co., Glastonbury, Conn., make the "only soap fit for the face." In another column they offer to send a free trial sample of Williams' Shaving Soap.

M. E. Rose, of Takoma Park, D. C., a White Wyandotte winner at Hagerstown, Md., where he won first cockerel in 1905 and first and fifth cockerel in 1904, is now a regular advertiser in AMERICAN POULTRY JOURNAL. His first pen will be headed by cock that won first as cockerel at Hagerstown, 1903; second pen by cockerel that won first at Hagerstown, 1904; third pen by cockerel that won fifth at Hagerstown, 1904, by cockerel sired by first pen cock, and fully as good a cockerel as in pen two but not a prize winner, as he was too young to show at Hagerstown. Mr. Rose has been breeding White Wyandottes since 1899.

At the recent Chicago show A. W. Davis, of Big Rock, Ill., showed a line of superb birds in the Golden Wyandotte class. His stock has a rich finish in deep rich golden and jet black and of true Wyandotte shape. For many years Mr. Davis has carried off the creamy prizes, and this year in a class that was probably the strongest line of goldens ever seen in a show room he won first hen, first pullet, first pen, second cock, third pullet, fourth cock, and two of the three silver cups given by the National Golden Wyandotte Club.

At It, In It And Around It 30 Years

Out out the corners as you have no cold eggs

MR. AXFORD in 1875 received HIS FIRST DIPLOMA on the BEST INCUBATOR. You can't afford to spend your money without getting 1905 CATALOGUE from the oldest manufacturer of incubators and brooders. With 30 years constantly improving and simplifying the AXFORD INCUBATORS and BROODERS, we are now able to put before you a machine not only to hatch the largest percentage of chicks, but with our proper APPLICATION of MOISTURE at all times we guarantee to hatch the largest and healthiest birds. Nothing on the market to compare with our BROODERS in caring for chicks. WE GUARANTEE NO CROWDING. Incubators are built in four sizes, 72-150-200-400 egg capacity. With or without nursery. HATCH and RAISE chicks with one machine, one LAMP at one time. The AXFORD can be placed anywhere, in any room, hot, cold or dry and hatch equally as well. SEND FOR 1905 FREE CATALOGUE.

AXFORD INCUBATOR CO., DEPT. 3
CHICAGO, ILL.

New Stock For The New Year

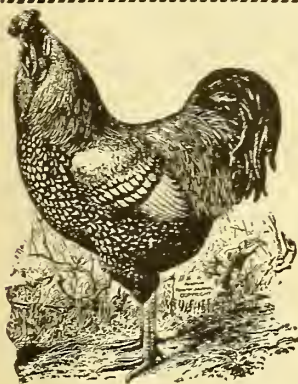

Improve the quality of your stock by adding a pair, a trio, or pen of our high grade

PRIZE WINNING FARM BRED POULTRY

Last Fall at various State and County Fairs we won **1628 Prizes**

The stock we sell you is just as good for breeding purposes as our prize winners. We guarantee the purity of the breeding and general health, vigor and conditions of everything we ship. Special prices if you write and call attention to this adv.

Our New Catalogue is in press and will be ready for mailing in a few days. It is the most practical poultry book on the market. No high sounding titles; just plain "Chicken Sense." Write and send five 2-cent stamps for a copy. It will save you money.

HERE ARE A FEW of the breeds shown and described at the special prices.

Light or Dark **Brahmas**; Partridge, Buff or White **Cochins**; Black **Langshans**; Barred, White, Buff **Ply. Rocks**; Black or Mottled **Javas**; Golden, Silver White or Buff **Wyandottes**; Black, White or R. C. **Black Minorcas**; S. or R. C. W. or Brown **Leghorns**; or Buff **Leghorns**; Buff **Orpingtons**; Blue **Andalusians**; Cornish Indian or B. B. **Red Games**, Pekin **Ducks**; Toulouse or Emhden **Geese**; Mammoth Bronze or White Holland **Turkeys**. See catalogue for complete list.

EGGS

We pay as great care to the selection of eggs for shipping as to the mating, breeding and choosing of stock for filling orders. We guarantee all eggs shipped by us to be pure bred and fresh. We pack with greatest possible care. **No better eggs from anyone at any price.** Write us now for what you want and get our quotations before you buy.

The Remarkable Growth of our business has necessitated largely increasing our farm acreage and removing our business offices to commodious rooms in the Seitz Block, opposite Freeport College of Commerce. These changes give us vastly improved facilities for handling all branches of our business. We get our mail every hour and can be instantly reached by Long Distance Phone or Telegraph. Address all correspondence to Freeport. **We have no branches.**

The K-G. POULTRY YARDS

Circleville, Ohio

SUCCESSFUL FARMERS AND GARDENERS.

The successful gardener is successful because he cultivates his brain while cultivating his garden. He must not only know soil conditions, the time to plant, be able to judge the best seed, and know when to cultivate, but he must be a judge of the tools he will use, and be able to select those which will give the greatest amount of service with least labor.

The Bateman Manufacturing Company, of Grenloch, N. J., have for nearly seventy years made a special study of the manufacture of labor-saving, money-making tools. There is no point of excellence that their famous Iron Age farm and garden implements do not cover. The No. 6 Combined Double and Single Wheel Hoe, Hill and Drill Seeder, shown in the illustration, INSERT CUT.

is a good example of the utility and completeness of the modern implement for gardeners who cultivate for profit. This tool is equipped in a most satisfactory manner for all work on market garden or farm, where hand work is to be employed in seeding and cultivating, or where horse cultivation is to be employed after the plants arrive.

The seed-sowing device is very simple, and the change from sowing in continuous rows to that of dropping in hills can be instantly made. The hopper holds two quarts and will distribute uniformly whether full of seed or when only a small packet is to be sown.

It can be changed into a complete double or single wheel hoe by the most inexperienced in less than five minutes. The high wheels of this implement also make it easy to operate, yet do not give to inequalities of soil as a low wheel.

The manufacturers issue a free book, "Iron Age," describing in detail this valuable combined outfit, as also a large line of garden tools, horse hoes, cultivators, potato planters, sprayers, etc. The book also gives considerable information of interest to every farmer and gardener. A postal card directed to the Bateman Manufacturing Company, Box 119, Grenloch, N. J., will secure it.

THE RACING INCUBATOR.

We are reproducing here a cut of the Racine Incubator, manufactured by the Racine Hatcher Company, Racine, Wis. This is the incubator that has resulted from the continuous work on incubators of a man who has given twenty-three years over entirely to this single occupation. Our readers have doubtless been struck with the distinctiveness—we might say peculiarity—of the Racine Hatcher advertising. It is devoted almost exclusively to their incubator book rather than to the machine itself. We give the illustration, but most follow the same plan in this notice. The points made, the theories demonstrated and put into practice, the workings and the why of it all, that comprehend twenty-three years' work of an incubator specialist are not to be covered, or even hinted at, in a notice like this. The book itself must be read. The book is not sold. A postal will bring it, and, aside from showing wherein the Racine differs from most incubators, it contains a fund of sound sense, which every poultry raiser must appreciate. The vital feature in the Racine, as in all incubators, is heat supply, regulation and ventilation. Of this problem the Racine Incubator presents what seems to be a well high perfect solution. The uniform good results produced by many thousand users, in all parts of the country, attest this fact. There is no question about the Racine being in the first rank of incubators. We advise sending for the book and learning the theories of incubation which it has reduced to practice. Consult the advertisement elsewhere and direct accordingly.

Brent & Eddy, of Oconomowoc, Wis., won on Cornish Indian Games at Chicago, Jan. 23 to 28th. '05, as follows in a class of 25 entries: 2nd pullet; 3rd. 5th cockerel, three entries. The Indian Game at Chicago were nearly all young stock and a fine class of birds.

E. B. McGaw, Ypsilanti, Mich., breeder of Single Comb Rhode Island Reds, won as follows at Ann Arbor, Mich.: 1st cock; 3rd cockerel; 1st. 2nd hen; 1st pullet, and 1st pen, in a very strong class.

WHITE LEGHORNS

S. C., Wyckoff and Blanchard Strains

My breeders are the best that money could buy. Forty acres of fruit and chickens—these two varieties. Personal attention given to all stock and eggs. A few sittings will be sold this season at \$2 per 15 and eggs shipped in Eyrie cases. I have the layers and egg makers. Show qualities have not been neglected. Your money refunded if not satisfied. Reference, any bank in this city.

SATISFACTION

Isn't this enough for any
man to expect?

Mathews, Ind., Dec. 11, 1904.

Dinsmore & Co.

Dear Sirs:—The one hundred White Wyandotte eggs I bought of you proved the best investment I ever made. I hatched fifty-three nice chicks. I have just returned from Marion poultry show, where I won 1st, 2d, 3d cockerels, 3d pullet, 1st and 2d pens, seventeen specials and \$10 silver cup for best display of any one variety. If you will sell me eggs the same price I will take 500 or 1000 next spring. Wishing you success I am,

Yours truly, R. B. LITTLE.

We have ten grand pens mated for best results, and we guarantee our eggs to be 75 per cent fertile. \$2 per 15, \$10 per 100.

Hillcrest Poultry Yards

OUR NEW BOOK

ON POULTRY for 1905 is the most practical book ever published on the care of poultry in health or disease. Gives best plans for houses, how to feed for more eggs and how to MAKE BIG MONEY. Send 15c for mailing. Fowls and eggs for sale cheap.

JOHN BAUSCHER, Jr., Box 130 Freeport, Ill.

SEASONABLE ADVICE.

Now is the season of the year when poultrymen begin to clean up and put in better condition the yards and quarters for their fowls. The houses particularly should be given attention and many poultry keepers who are dissatisfied with the old and inconvenient method of keeping the quarters clean and in sanitary condition are looking around for something practical and inexpensive in the line of roosting and nesting fixtures. We do not know of any line of goods which fills so perfectly the needs of progressive and up-to-date poultrymen as do the portable henry outfits manufactured by T. F. Potter & Co., Downers Grove, Ill. They make their fixtures in three different styles and forty different sizes, so that no matter how a house may be arranged it is an easy matter of equipping it and they are so reasonable in price that no poultry raiser can well afford to be without such convenient and time and labor saving appliances. They have equipped hundreds of houses with their portable outfits and they seem in every instance to give perfect satisfaction and provide a truly model and up-to-date henry equipment. If you are interested in the best and most approved apparatus in this line it would be to your interest and profit to send for their large thirty-page catalogue on poultry house fixtures. This book will prove both interesting and instructive to the wide-awake progressive poultry keeper.

BOSTON WINNINGS, 1905.

Closing up a most successful season, the Elm Poultry Yards, of Hartford, Conn., carried off honors at Boston Exhibit in strongest competition, sufficient to demonstrate to the buying public that they breed exhibition stock in quantities, winning twenty-four regular and nine special prizes in the hottest of competition, besides winning the \$100 championship cup for best White Wyandotte female, any age, on their first prize pullet, so nearly perfect that many scored her to 98 and were hardly justified in making any cuts at all. She also won Ivory Soap special for whitest bird in the entire exhibit, any age or variety. Also Spratt's gold special for best Wyandotte, any variety, as well as their

winning display specials, etc., etc. All this after furnishing winners for nearly every large exhibit of the country.

The demand for exhibition birds of quality and the fact that a satisfied customer is the best kind of advertising has done a great deal in the past ten years to stamp quality on the breedings of the Elm Poultry Yards. Hundreds of unsolicited testimonials have been received from parties winning on stock raised from settings direct from their yards. Their winnings at St. Louis World's Fair were simply in keeping with their stock. Their first pullet White Wyandotte sold for \$125, with their second winner at \$75; their first prize White Leghorn hen for \$300; their first prize White Leghorn pullet for \$100, and, what is more, birds of their breeding won in the exhibit also, proving they have quality stock for their own wants and to spare. Their advertisement may be found on another page of this issue and in our columns every issue, they believing a good thing must be made known to the buying public.

With the recurrence of each spring there comes to every poultryman the trying question, "How shall I raise the chicks I hatch?" The brooding problem is undoubtedly the most serious of all the troubles that afflict poultry raisers. A mistake in hatching costs the greater part of the year's profits. It's a mighty poor plan to be careless in this respect.

During the past few years an increasing number of our readers have been using the Humphrey Pure Air Brooder, which we believe fully meets every requirement of the most discriminating and discerning poultryman. In the first place the Humphrey Brooder is large enough to give ample room for the chicks. Its system of ventilation is unexcelled by any other brooder. The radiation and circulation of heat is perfect, allowing for the admission of more fresh air than can be admitted into other brooders, and, at the same time, consuming less oil. Its provisions for cleanliness are unique and unexampled. It is the most convenient brooder on the market. We urge our readers to investigate this brooder. Send to Humphrey White Street Factory, Joliet, Ill., for their free book, "Poultry Hints," which fully describes and explains their brooder, along with

many other important points of poultry raising.

Humphrey guarantees that the Humphrey Brooder will raise a larger percentage of chicks put into it than any other brooder made, and at the same time will be more convenient to operate and will cost less for fuel. It's a strong statement, but, coming from such a reliable firm, it means exactly what it says. You ought to investigate it.

We are in receipt of a copy of the new catalogue issued by E. G. Wyckoff, of Ithaca, N. Y. This is a complete catalogue of his White, Buff, Black, Pyle and Silver Duckwing Leghorns, Silver Penciled and Partridge Wyandottes and Pekin Ducks. This is entirely illustrated by Burgess, Schilling and Graham, and contains illustrations of recent importation of three of the Leghorn varieties. Readers will notice that the illustrations are nearly all of first prize winners at some leading show, and Mr. Wyckoff's customers are given an opportunity to purchase eggs for hatchings from his first prize matings, an opportunity they do not get from most breeders.

Every reader of AMERICAN POULTRY JOURNAL should have a copy of this catalogue, which can be furnished by writing Mr. Wyckoff and mentioning this paper.

Poultry raisers will be interested in reading the advertisement of the Burr Incubator, which appears in this issue. Mr. Burr, from whom it takes its name, is the inventor and superintends the making up of each machine. The first object of Mr. Burr is to produce a durable, simple-acting and absolutely successful incubator. The Burr Incubator is made on honor and sold on a contract which permits the purchaser a practical test of its merits. The Burr catalogue containing complete descriptive matter and valuable information for poultry raisers is free. Address Burr Incubator Company, Omaha, Neb.

Mrs. J. H. Orebaugh, of Batavia, Ohio, won at Cincinnati at the late show on her White Plymouth Rocks: First, second, third and fourth cockerel, first cock, first and second pullet, first hen, and tie for second cock; special ribbon for first cock A. W. P. Rock Club. First pullet won \$25 silver cup offered by the Ivory Soap Company for the best white fowl, any age, sex or variety.

HALLOCK'S WHITE WYANDOTTES

My First Prize Pullet, at the Madison Square Show, also winner of the \$25.00 silver cup for best pullet and full sister to the pullet which I sold out of my first prize pen for \$100.00, to my knowledge the highest price ever paid for a White Wyandotte female

Were the sensation of the Madison Square Garden Show, New York, January, 1905. In the hottest class of White Wyandottes ever gotten together (483) they made the following unparalleled record on seven entries

1st COCKEREL
1st HEN
1st PULLET
1st PEN
1st COLLECTION

Never before was such a record made on any variety in such a hot class. I won \$125.00 in cash prizes, besides making two record breaking sales, selling the cockerel heading my first prize pen for \$200.00, and one of the pullets for \$100.00. I could afford to sell this cockerel as I have seven of his full brothers just as good to breed from.

The **HALLOCK** strain has been winning at the large western shows for years. If you are about to start with the White Wyandottes, or wish to improve your flock, you will make no mistake in placing an order with me. All of my young stock is farm raised and vigorous. The White Wyandottes are the most popular variety in America, and mine is a good laying strain.

I tell you exactly what prizes I won and where I won them. I do business on the square, and guarantee a 50 per cent hatch from all eggs purchased from me. All stock sent out on approval and I pay all express charges if not satisfactory.

Can mate up a fine breeding trio for \$30.00, or a pen of five birds, properly mated to produce the best results for \$50.00. This is a chance to get some of the CREAM of White Wyandottes. Have cheaper birds if you wish them.

HOW I WILL MATE MY PENS

I have mated up seven choice selected breeding pens from which I will sell eggs for hatching at \$3.00 per 13; \$5.00 per 26; \$8.00 per 50 and \$15.00 per 100. Every one of these pens is headed by a first-class white blocky male bird, closely related to my New York winners, and I am looking for good results from all of these pens. Every one of the females is chalk white, good shape, good leg color, bay eyes, good combs, short broad backs, short well spread tails and extra fine in every section. I do not think there is a breeder in the country who has whiter birds than mine. Have been breeding the same strain for years. Orders for eggs should be made direct from this advertisement. Please do not ask me to send you eggs from my first New York cockerel as I am using him in a special mating from which I do not sell eggs at any price. I do the honest thing and tell you this. In order to supply the demand for eggs a little better in quality than my average pens, I have selected three of the best from which I will sell eggs during March and April at \$5.00 per 13; \$8.00 per 26; \$11.00 per 50 and \$20.00 per 100. My strain is noted for its shape and color. If you want eggs from this kind of stock, "YOU HAD BETTER HURRY;"

ROSS C. H. HALLOCK, 6314 Clifton Avenue, St. Louis, Mo.

MODEL INCUBATORS.

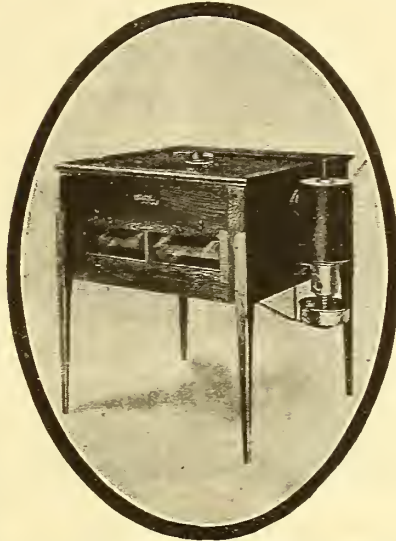

How They Are Looked Upon by Practical Market Poultry Men.

The question, "Which is the most practical hatcher?" must be of interest to every user of an incubator. To a man who is running two or more hatches each spring the addition of a small percentage in the results secured—five or ten chicks or ducklings more for each hundred eggs set—adds dollars to the profit side of the investment. A machine that is economical with oil and requires little of the attendant's time to operate is, in addition, a money saver. Both these claims are made by the manufacturer for the Model Incubator.

To make a claim and to prove it to the discriminating poultry man is quite a different matter. Mr. Cyphers seems to be proving his claim very effectively by the verdict given by the large market poultry breeders who have tried the Model and passed on its merits. When these men discard other makes for the Model it seems to be proof positive that it is the best hatcher, the greatest labor saver. That

the large breeders are discarding other makes for the Model must become evident to any one who is following Mr. Cyphers' advertising this season.

Last season when Mr. Cyphers put his new machine, the Model, on the market, with the new system of air circulation, giving more perfect ventilation than in his older designs, the public were at once interested, and since that time poultrymen the country over have been watching the progress made with it. Early the past fall a new patented thermostat was added

to the Model equipment, which gives a much larger movement, and in consequence a much more equable temperature with less care than any other regulator in existence. After this thermostat appeared other manufacturers began to make loud claims of improvements to deceive the public, but months have gone by and their claims have not been made good. There is no regulator on the market today other than the Model that will hold the temperature in the incubator within two degrees without some adjustment of the lamp flame. The greatest variation in the Model, between the highest flame the lamp will

carry and the lowest one that will hold the temperature, is less than one-half of one degree. This insures great accuracy of regulation with the least attention, and every poultryman knows that the more even the heat the better the hatch and the stronger are the chicks or ducklings which come out.

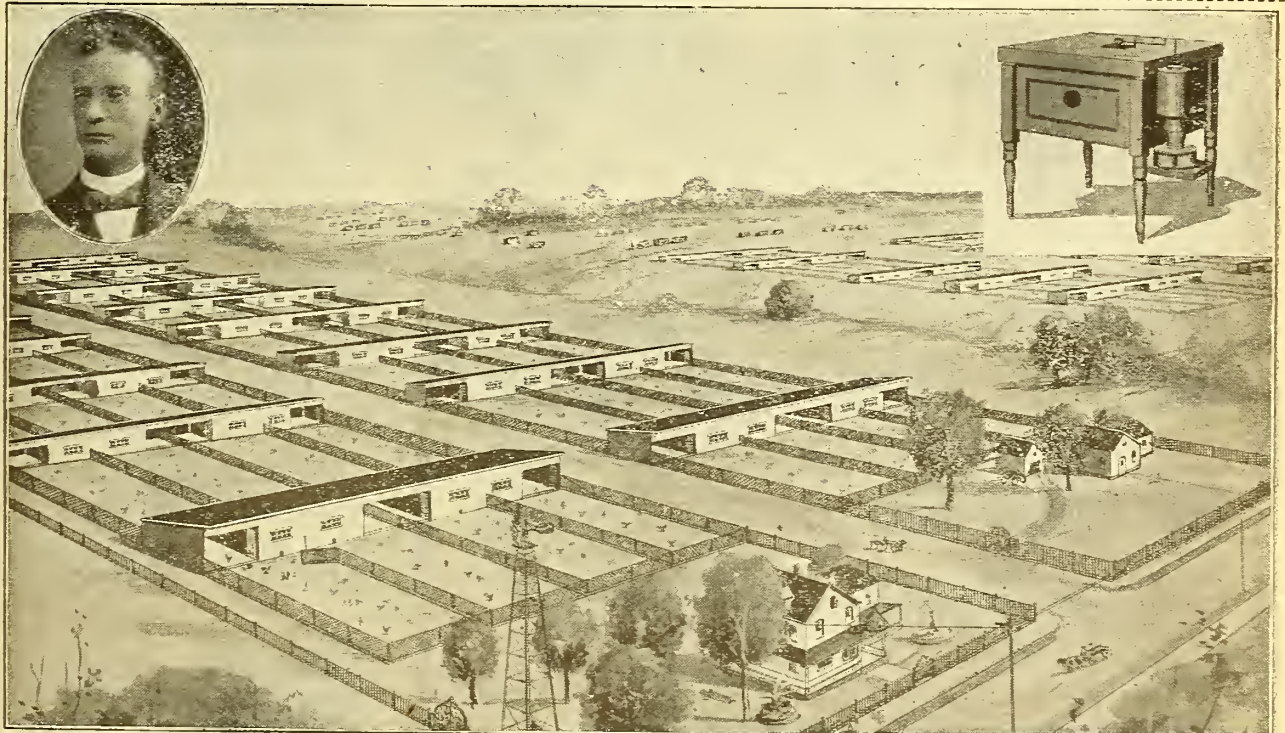

Every chick or duckling added to the hatch means 30 to 50 cents profit; every half hour saved each day in the care of the incubators means that the year has been lengthened half a month, which can be devoted to increasing the output. Briefly, the market poultryman must have the best to secure the full measure of profit on his labor and investment. Those of our readers who have not secured one of this season's catalogues of the Model Incubators will do well to address Mr. Charles A. Cyphers 301, Henry street, Buffalo, N. Y., who will be glad to furnish it free of any charge. It tells something of the profit side of the different branches of the poultry business, and Mr. Cyphers is preparing a comprehensive lesson on each branch for the benefit of his customers. This will undoubtedly prove of great value to those who secure it, coming as it does from one of our greatest authorities on artificial poultry raising.

The Fruit Grower, of St. Joseph, Mo., is making wonderful strides, and the publishers are to be congratulated upon getting out a magnificent paper. This is an illustrated monthly magazine for the progressive American farmer, dealing principally with the fruit question. It is beautifully printed and illustrated, and contains a great deal of interesting reading matter for the instruction and benefit of all matters pertaining to fruit raising. The price of this is 50 cents a year, or three years for \$1, and subscriptions should be sent to the Fruit Grower Company, Box 7, St. Joseph, Mo. The March number will be the gardening number, and will comprise about sixty-four pages and cover.

C. A. Dutton is now permanently at Exmoor Farms, of which E. A. Weimer is proprietor, Lebanon, Pa., as Brown Leghorn man and farm superintendent, and to look after the interests of Exmoor Farm's many patrons.

Our New Book, "MONEY IN POULTRY," Just Out.

FRANK FOY proprietor of the CRESCENT POULTRY FARM, has just issued a new and valuable book called "Money in Poultry." This book contains 84 pages and probably gives more reliable information about the business based on actual experience on the farm than any other book of the kind published. It tells everything about the poultry business from start to finish: describes our 25 leading varieties of pure bred fowls, and the Frank Foy Incubators and Brooders. Quotes extremely low prices on fowls, eggs, incubators and brooders. Mailed for 4 cents in stamps. Address

FRANK FOY, Box B, Des Moines, Iowa

219 Egg Strain Barred Plymouth Rocks 219

ELMDALE FARM C. L. DUFFIELD, Prop.
Room 11, Commercial Bldg., Marshalltown, Ia.

Near Shenandoah, in the famous Iowa corn belt, lies Sleepy Hollow Farm. Here some eleven years ago a young market gardener concluded that instead of confining his efforts to gardening for the consumer he might as well be raising seed for the producer.

Having been raised a gardener, his early experience and training rendered him peculiarly adapted to the business of a seedsman; to anticipate the needs and avoid causing the trouble and annoyance which so often vex the patience of the truck farmer.

At the start he determined that only reliable seeds should be sold under his name and only those he could guarantee; that full measure, just weight and true description should be the rule. He began by making his neighbors his first customers, and they soon discovered that in him they had a man who could always be depended upon to furnish nothing but honest goods. They spread the news to others and the ever widening circle of pleased patrons necessitated the steady increase of his facilities, until now the name of Henry Field, Seedsman, or as he is often called, the "Ear Seed Corn Man," is known far and wide among farmers and gardeners throughout the Middle West.

His annual catalogue is a mine of information on seed subjects and a carefully prepared list of good things to be found in the "Red Packet" seed packages, red packet being Mr. Field's method of identifying the seeds shipped from his establishment. Before purchasing seed it is worth while securing a copy of Mr. Field's catalogue, which he sends free of charge, and becoming acquainted with the good things he offers. The 1905 catalogue is now being sent out.

The A. A. Berry Seed Company, whose advertisement appears in our columns, are having a warm time these days filling orders for their popular brands of seed corn, garden and field seeds. The new assistant to Mr. Berry, Mr. W. C. Affeld, is finding ample scope for his fine business ability in helping to keep even with the avalanche of new orders that are already upon them. Good seeds, fair dealing and prompt shipments are appreciated by our farmers, who are no longer hay-seeds, but modern business men. Write for their new free catalogue. It's one of the very best and has a few extra features that every seed buyer ought to know. Address A. A. Berry Seed Company, Clarinda, Iowa.

Box 159, Shelton, Conn.

A SEED GROWER AND SEED
SELLER.

If you want to be dealt with liberally and at the same time buy your seeds from the man who grows them, R. H. Shumway, seed grower, Rockford, Ill., is a good man to get into correspondence with. You will be assured of fresh seeds and the variety you select. That assurance is worth paying an extra price for, but Mr. Shumway is remarkably low in his prices, far lower than most seed sellers, many of whom buy their stocks to sell again. Of course, they must all have a profit. Mr. Shumway grows and sells many seeds at a penny a packet. That's better than a nickel a packet when you know them to be of right varieties and fresh. Onions, for example, are something of a specialty with him. Some varieties of onion seed he is now selling at only 50 cents a pound. He publishes a catalogue of his home grown seeds, and mails free to all applicants. It is a good seed book to send for.

George A. Heyl, Washington, Ill., recently offered some valuable prizes to be given on poultry orders. The result of the contest was as follows: R. L. Bolitho, Alden, Iowa, won the Shetland pony on an \$80 order; D. O. Miller, Eldora, Iowa, won the pair of Poland-China pigs on a \$67 order, and Mrs. Charles J. Johnson, Streator, Ill., won the pen of poultry on a \$32.50 order. AMERICAN POULTRY JOURNAL readers should secure a copy of Mr. Heyl's catalogue, in which there will be found fully illustrated fine descriptions of his Shetland ponies, Poland-China pigs and poultry. Mr. Heyl is an extensive breeder, with years of experience, and has filled important positions as poultry judge, and buyers are assured good attention and good stock in ordering from him.

Ames Plow Company, Boston and New York, are sending out a very complete and perfect catalogue of their seeding and cultivating implements. This catalogue contains not only a description of the machines sold, but also the very excellent printed essays on garden and seed planting. Every reader of AMERICAN POULTRY JOURNAL should send for a copy of this.

The Barred Rocks of G. A. Miles, Laceyville, Pa., are in front among the best on earth. They are distinguished for unusually narrow, clear, ringy barring, birds of his exclusive breeding, in his hands winning five-sixths of the prizes competed for. He has a very fine stock for sale. Eggs, \$3 for 15, \$5 for 30.

Wilber Bros., Petros, Tenn., the Single Comb White Leghorn specialists, have mated up a number of very choice pens from which they are selling eggs for hatching. They sell everything under a positive guarantee to be as represented, and if any of our readers are looking for eggs or fowls of this variety we would suggest that they write for catalogue of the Gem strain of Single Comb White Leghorns.

Pratts Cow Tonic.

Made by Pratt Food Co., Phila. Over 30 years old.

The writer has before him a copy of the Dollar Making Incubator proposition. This is the title of the booklet recently issued by the Iowa Incubator Co., of Des Moines. It describes the methods they use in the construction of their incubators and clearly points out the advantages to be gained by the use of Iowa incubators. It contains an entertaining discourse on the profits of poultry raising in its various branches. We all know there is money in poultry, but this book makes us know it more surely than ever. Any one who has studied the poultry proposition with a view to engaging in it at some future time or any one who is now interested in the business and thinks they would have use for an incubator of the right kind, would do well to secure a copy of this book. The publishers send it upon request. Simply mention the name of this paper when writing to the Iowa Incubator Co., of Des Moines, Iowa.

The March Century will contain a new and interesting portrait of President Roosevelt from a stereograph by Underwood & Underwood, of New York. The picture shows the President in mountain garb at Glacier Point, Yosemite Valley, and was taken during his recent visit to California.

T. R. McDonald, of Winchester, Ky., won at Louisville, January 22-28, 1905, in a class of ninety-one White Plymouth Rocks on three entries, second cock, third pullet. There were twenty-one cockerels in the show, which was judged by comparison.

Attend To Your Renewal.

Many thousand subscriptions to the AMERICAN POULTRY JOURNAL expire this month, and we would ask as a favor that the matter be attended to at the very earliest date possible. Sometimes our subscribers wait to be personally notified by mail of the date of expiration. With such heavy work as falls upon our subscription department at this time of the year, it is impossible for us to write each one, so we would thank our patrons to attend to their renewals promptly without waiting for any special notification.

Subscription offers will be seen on various pages of the Journal. Send in two subscriptions at 50c each and we give your own FREE.

We cut off at date of expiration. The date on the wrapper of your paper will show to what time you are paid. "Mar. 05," for instance, means that you are paid to March, 1905.

As the policy of the AMERICAN POULTRY JOURNAL is to have all subscriptions payable in advance, we would be pleased to hear from each one in good time, so that there may be no disappointment caused by being dropped from our list. Send your subscription AT ONCE.

T. F. POTTER & CO., BOX A, DOWNERS GROVE, ILL.

Try the New Majestic Tomato

The greatest vegetable novelty of the season. By all odds the largest, finest flavored and most productive in existence. Thousands of our customers who received small trial packages last spring wrote us in the fall that it surpassed all other sorts and produced 100 lbs. to 147 lbs. of fruit to the plant. Many reported single tomatoes, weighing 3 lbs. to 5 lbs. each. Just think what this kind of a crop would mean on an acre of ground. The fruits are not coarse grained and poor like other large sorts, but are smooth, solid, have few seeds, and are unsurpassed in quality. Of fine shape and beautiful color. Last year the seed sold at 40¢ per packet of 100 seeds, but this season, we have reduced price to 10¢, and in addition to this we are offering

\$100.00 in Cash

prizes this year for the largest tomato grown. Our large illustrated catalogue describing the above and many other choice varieties will be sent free if you mention this paper.

IOWA SEED CO.,
Des Moines, Iowa.

SELECTING BREEDERS.

To the amateur poultryman about to mate his breeding yards we would advise line breeding. At least do not be so fearful of inbreeding that you get cockerels of an entirely different strain each year. You can never hope to get a strain of uniform characteristics that way. Buy a good hen, mate her with a cockerel of your own breeding and from the product of this mating select the cockerels for next year.

SURE HATCH SUPREMACY

Remarkable Results of Scientific Incubator Making and a Liberal Selling System

The kind that hatches chicks that live.

60 DAYS' TRIAL

Freight Prepaid. Our Guarantee Backed by \$100,000 Cash

It is one thing to claim superiority for your product and quite another to prove it. The Sure Hatch Selling System involves it or No Sale.

Over 60,000 Sure Hatch Incubators are in use throughout the United States.

These machines were sold with the return privilege, and every one of them stood the test of actual use.

A Sure Hatch Incubator is a money-maker for its owner and a trade-winner for us. It hatches more chicks that will live and grow to the 100 eggs than any other incubator made. That is the secret of the wonderful growth of our business.

There's all the difference in the world is the various makes of incubators.

The Sure Hatch keeps its place at the head of the list, because every machine we sell is so well made that we are willing to stake our reputation and our money on the results it will show in operation. Take the matter of material. We found by extensive tests that the best wood to use in incubators is redwood. Consequently we build our machines of clear California redwood, and we know they will never warp or crack, shrink or swell. We make the tank and heating pipes of copper because it practically lasts forever. We use asbestos lining because we want the best non-conductor of heat or cold. Some so-called incubators are simply thrown together in the quickest and cheapest manner possible. Sure Hatch Incubators are carefully made by expert workmen in the largest incubator factory in the world, with the aid of the most modern machinery. They embody thoroughly scientific principles. The Sure Hatch water Heater has 138 square inches of heating surface, and only a small fraction of it is outside. Heats quicker and at less expense than other heaters.

The eggs are heated from the top, by air that is kept automatically at just the right temperature. 30 cents worth of oil is enough for one hatch. 30 cents worth of time is a liberal allowance for necessary care.

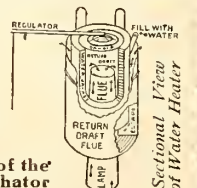

We offer on 60 Days' Trial, Freight Prepaid, east of the Rocky Mountains. Our 100-Egg Sure Hatch Incubator (actual capacity 120 eggs) guaranteed five years.

Send \$10.00 and we will ship the machine at once. Money will be refunded if not absolutely satisfactory. We can make quick shipment. If you live east of the Mississippi River, address Indianapolis, Ind. If west, Clay Center, Neb. Our big Free Catalogue now ready. Invaluable hints to poultry raisers. Get a copy. Write us at once.

DAVIS ANTI-LOUSE ROOST BRACKETS.

Poultrymen who know the ravages made on fowls at night by the midge louse or mite will appreciate the necessity for some such appliance as the Keyes-Davis Company, of Battle Creek, Mich., are advertising in this paper. Their Anti-Louse Roost Bracket is intended to protect fowls from this class of vermin, which are altogether different from the ordinary body lice. The dust bath and lice killers applied to fowls do not relieve from the midge louse. They crawl upon the fowl at night and return to the under side of the roost or to wall cracks during the day. This bracket, by means of oil cups, prevents the lice from reaching the roost at all. It has other advantages, chief of which is that it can be raised up against the wall so that the roost platform can be cleaned, roosts painted on under side as well as above and permitting easy cleaning of the entire house. The workings of the bracket are well shown in the illustration in the ad. It will be noticed that they make two styles, single roost and multiple roost style. A neat illustrated circular sent out by this company sets forth the making and advantages of the bracket in detail. Any one wanting to install an up-to-date roosting device should write for this circular. The Keyes-Davis people also manufacture an excellent line of poultry markers. The most popular of these are the Davis poultry punch and the Climax, Smith Sealed, Eclipse and Double Clinch leg bands. These are among the most popular markers made. Note the advertisement and write direct to the manufacturer for all particulars.

C. A. Strohm, Elkhorn, Wis., breeder of Barred Plymouth Rocks exclusively and originator of the Badger strain, has just issued a new illustrated catalogue, which gives his mating of breeding pens in detail and tells about Badger Boy, one of the greatest Barred Plymouth Rocks ever put in a breeding pen.

Mr. Strohm is state secretary in Wisconsin of the American Plymouth Rock Club, and certainly has some good bargains to offer. He is mating seven breeding pens this season and thinks they are the best he has ever mated for the egg trade. His eggs are proving very fertile. He put some in incubation February 6th that proved 91 per cent fertile. He has never had eggs

so fertile during the winter, and this certainly is a great record.

H. A. Emmel, Mars, Pa., won at Butler, Pa., show, held February 8-11, 1905, as follows: On four entries in Light Brahmas, first and second cocks; first and second

COLUMBIAN WYANDOTTES.

Winners of three firsts at Detroit, and third cockerel at World's Fair. Owned by H. H. and E. M. Coburn, Memphis, Mich.

heus. On eight entries in S. C. Buff Orpingtons, second cock; first hen; first, second and third cockerel; first, second and fourth pullet. On five entries in S. C. Brown Leghorns, second cockerel (entitled to first, from all Leghorn authority); second hen (also entitled to first and second hens, from all Leghorn authority); second and third pullets. Mr. Emmel also won the special for the best Light Brahma cock and the special for best Orpington pullet in show,

all varieties competing; besides winning five other minor specials.

F. C. Bailey, of Reading, Mich., has won a total of twenty-four prizes at the last two Chicago shows on S. C. and R. C. Whites, S. C. Buffs and R. C. Blacks. Thirteen out of a possible seventeen first prizes. Then, too, a different string of birds were shown each time, with the exception of two birds. Mr. Bailey now owns the champion R. C. White Orpington cock of the world, valued at \$300. The bird was conceded to be the whitest male bird at the late World's Fair, where he won first prize. Send a stamp and Mr. Bailey will send you a copy of his newest 1905 catalogue in colors.

The Willow Brook Poultry Farm, of Berlin, Conn., have published at a large expense a forty-page illustrated catalogue, describing Willow Brook Farm and its winning Orpingtons, and also a twelve-page Mating List, describing over thirty-two different matings and yards of birds in the S. C. Buff, Black and White Orpingtons, and giving prices of eggs from each and every yard.

They also publish a book of testimonials from parties who have written them unsolicited. They aim to please their customers and do everything that is within reason to have each and every customer a satisfied one.

J. H. Santee has severed his connections with the Greystone Poultry Farm, Yonkers, N. Y., and is now on his own farm at Campville, N. Y., and intends to devote all his time and attention to the breeding of S. C. Black Minorcas and White Plymouth Rocks.

H. O. Shaw, of Grinnell, Ia., manufacturer of Leg Bands, has had a disastrous fire, destroying many of his tools and dies. He will, however, in a short time be able to fill orders.

W. H. Wiebke, of Fort Wayne, Ind., won at the Chicago show, January, 1905, ten specials on his S. C. Brown Leghorns in addition to his regular winnings as shown in the list published this month.

Box A, Hope, Indiana

A LESSON IN THE MARKET.

Young housekeepers will discover a fund of information in the papers contributed to *The Delineator* by Isabel Gordon Curtis under the title, "The Making of a Housewife," giving in the March number a lesson in the meat market. The hints are practical and helpful. Other topics of domestic interest, especially during the Lenten season, are "Attractive Fish for Lenten Days," illustrating and describing a number of delicate ways of preparing fish, and a variety of recipes under the headings, "Fruit and Vegetable Salads," "Codfish Variations," and "Eggs—from a Hygienic Standpoint."

R. H. Robson, of Urbana, Ohio, won at the Ohio State Show, Dayton, January 25-31, 1905, on his Buff Rocks: First pullet, 93 1/4, scored by Hewes, in competition with fourteen pullets in class.

Mr. F. H. Stanwood, 433 N. Harvey avenue, Oak Park, Ill., made a good showing at the great Chicago show, 1905, with his pullet mated Barred Plymouth Rocks, winning two prizes out of five entries; average score, 93 points. Mr. Stanwood has all his pens mated up. Any one in need of some first-class stock or eggs should write at once.

R. A. Hewes, Crete, Ill., made good winnings at the Chicago, 1904, show with his Black Langshans. His birds are exceptionally good in color and prolific in egg production. Eggs in season.

E. E. Vanatta, of Vandalia, Mo., has just gotten out a new catalogue of his S. C. White Leghorns, which he would like to have in the hands of all AMERICAN POULTRY JOURNAL readers. It is nicely printed and contains much information about his stock.

MAKE THEM WORK.

Your breeding females—make them work. Do it by scattering a mixture of fine grains—millet, hulled oats, cracked wheat, kaffir corn, etc.—in the litter in the morning. Hens that work have good appetites. Their circulation is better, their combs are redder and they are happier. Remember that a laboring hen is the mother of vigorous, bound-to-live chicks. C. A. DUTTON.

Pine Grove, Pa.

New Steel Roofing and Siding \$2.00 per 100 Sq. Ft.

Painted red on both sides. Most durable and economical covering for Roofing, Siding or Ceiling for Residences, Houses, Barns, Sheds, Elevators, Storcs, Churches, Poultry Houses, Cribbs, etc. Easier to lay and will last longer than any other covering. Cheaper than shingles or slate. No experience necessary. A hammer or hatchet the only tools needed. It is semi-hardened high grade steel. \$2.00 is our price for the flat. Corrugated as shown in cut, or "V" crimped or standing seam costs \$2.10 per 100 square feet. We offer Pressed Brick Siding and Beaded Ceiling or Siding at \$2.25 per 100 Square Feet. Thousands of buildings throughout the world are covered with this steel roofing and siding, making their buildings

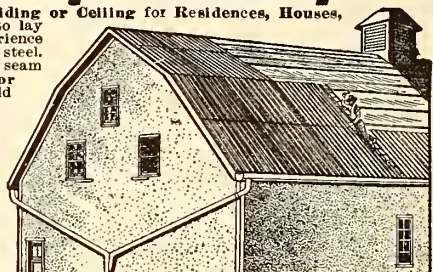

FIRE, WATER AND LIGHTNING PROOF.

Send in your order for as many squares as you may need to cover your new or old building. Time will prove its enduring qualities. Withstands the elements, best of all roofings. At prices noted in this advertisement.

WE PAY THE FREIGHT

to all points East of Colorado, except Indian Territory, Oklahoma and Texas. Write for prices for shipment to such points. Ask for further particulars. Immediate shipment if you mail us your order at once. Satisfaction guaranteed or money refunded. Our Special Catalogue No. K. 186 tells all about this roofing. It also quotes low prices on Building Material, Wire, Pipe, Plumbing, Sash, Doors, Furniture, Household Goods, Down Spouting, Eave Trough and thousands of other items bought by us at Sheriff's and Receivers' Sales.

CHICAGO HOUSE WRECKING CO., 35TH AND IRON STS., CHICAGO.

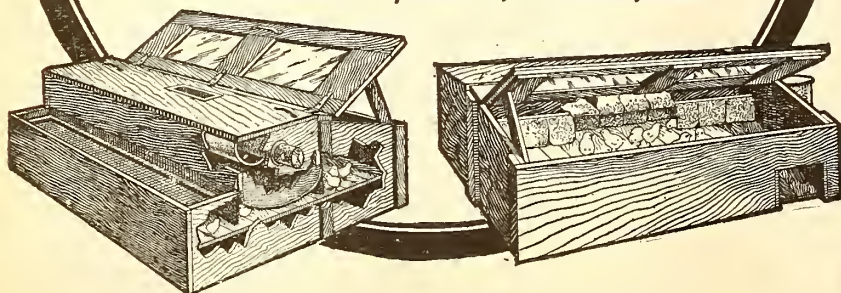

That's the Secret of

the "Mandy" Lee Brooder. It puts the heat right on the spot where the young chicks need it—on their backs—right where they get it from the old hen. It furnishes direct contact heat and in the natural, hen-like way, the only way to insure natural results. The chicks get it where they want it, when they want it, and just as much or little as they want. They can have their heads out in the fresh air this brooder supplies at all times, and have their backs against the warm hover. No wonder they live, thrive and grow fast in

"THE Mandy" Lee BROODER

What's the use of hatching chicks if you can't raise them to the profit-bringing point? There is not a brooder built that will raise one-half as many chicks to maturity as the "Mandy" Lee. Why? Because they are not built upon nature's lines and the "Mandy" Lee is. It comes so near to nature's way that there's nothing omitted but the old hen's "cluck." Write for circular giving full detailed description and illustrations showing how the "Mandy" Lee does it. Does it is so different; so much better, yet costs no more than the poor kind.

GEO. H. LEE CO., Box 71, Omaha, Neb.

WHITE PLYMOUTH ROCKS; BIG birds, pure white, good as the best. Eggs \$2 per 12, \$5 50 per 45. Breeding yards score 93 to 96 1/2. Farm range stock, selected, \$1 per 16, \$5.50 per 100.

VIEWS ON THE ALLYN POULTRY FARM, DELAVAN, WIS.

NEW POULTRY BOOK SENT ON APPROVAL.

Mr. Clarence Ward wants every beginner in poultry culture to read his new 50c book, entitled, "*Successful Poultry Culture for Pleasure and Profit*," and is willing to send it free on ten days' approval to every man, woman or boy interested who will take the trouble to write to him for it.

The book contains 132 pages, 35 illustrations, and 18 chapters, and is especially designed and written for the beginner, and also giving valuable pointers to the experienced breeder. It tells how to succeed and make big money raising poultry from the start, also how to get eggs in winter, feed chickens, succeed with incubators and brooders, operate a

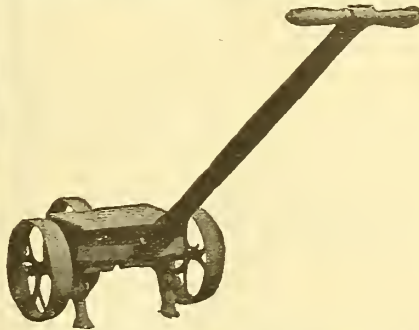

large market plant, cure disease, build poultry houses, make money on a small city lot, shows plans of model houses, and gives much more valuable information.

In order to assist our readers to get this book on approval we print the following coupon, and advise our novice friends to fill it out, cut off, and send it today: Congress Park Poultry Yards, Clarence Ward, Prop., Congress Park, Ill.

Enclosed find 4c in stamps for which please send me on approval, your new book, "*Successful Poultry Culture for Pleasure and Profit*." If I want the book I agree to send you 50c for it. If I don't want it, I agree to return it to you within 10 days.

STRATHMANN'S POULTRY YARD SEEDER.

Any reader of the AMERICAN POULTRY JOURNAL who keeps a dozen chickens or more should examine into the merits of the Poultry Yard Seeder, manufactured by the

Strathmann Manufacturing Company, 140 E. Fullerton avenue, Chicago, Ill.

This is a machine weighing only thirty pounds, easily propelled by means of the long handle attached to a wheel, and an apparatus for sowing grain or seeds. It sows two rows, 10h apart, at the same time, cultivating your ground and doing

what all poultrymen and writers recommend. This will keep your chickens scratching for their food. Nothing yet has been discovered that works more to the benefit of fowls than to have them exercise and work for their daily food. By sowing seed or grain a little distance below the surface of the ground the fowls, following their natural instinct to scratch for their food, work hard and earnest to find the seeds that have been deposited in the ground by this seeder. This machine attracted a great deal of attention at the Chicago show, where it occupied a prominent position in the north end of the building, and where the machines were in active operation during the show.

One strong feature of the machine is that it is simple and durable and cannot get out of order and can be operated by any boy or girl. Now that the springtime is fast approaching AMERICAN POULTRY JOURNAL recommends that every one of its readers send for a circular, addressing the Strathmann Manufacturing Company as above.

The Steinmesch Chick Feed has now been on the market for five years, and from a small beginning has grown to be one of the industries of St. Louis. The quality of this feed has been maintained regardless of the high price of grains and seeds. Only the best of everything is used. Twenty different kinds grains and seeds, including beef, bone and grit. It is being sold in England, South America and Alaska and all over the United States and Canada. It is being shipped in carload lots to S. H. Church, Los Angeles, Cal., who is Pacific coast agent, and who also handles the Petaluma Incubator and Midlands Feeds and other poultry supplies. Parties on the coast wanting the Steinmesch "Extra Quality" Chick Feed can get some from Mr. Church, 505 South Main street. Special prices will be made on large lots. Poultry fanciers should obtain a sample of Steinmesch Feed and compare it with others. See ad on another page.

Frank J. Hicks, Onarga, Ill., breeder of prize-winning White Plymouth Rocks and White Holland Turkeys, has mated up some very choice pens of both varieties and is offering eggs at a very low price, considering quality of stock. His White Plymouth Rocks score from 93% to 95, and he has many prize winners in his turkey yards, including the tom that won first at Chicago and second at St. Louis, and nearly all the females were first or second prize winners at prominent shows. Send for his circular and mention AMERICAN POULTRY JOURNAL.

"NABOB."

A remarkably fine cock bird, winning first at Dearborn, Mich., Dec. 12 to 16, 1905. Score as a chl. last season 94½ by Butterfield. He is a lemon colored Buff from tip to tip, not the slightest part of variation in color, has one of the finest neat, low combs that ever grew on a Buff Rock, and has solid huff wing and tail, and is a noted pullet breeder, throwing many pullets last season that score 94 points. "Nabob" will head my third pen this season. Bred, owned and exhibited by Dearborn Poultry Yards, S. D. Lapham, Prop., Dearborn, Michigan.

H. B. RUBBER ROOFING
The Cheapest Roof Ever Put On
 A new rubber roofing that for wearing qualities and cost cannot be equaled. Weather, rain, sun, proof-fire-resisting. Water runs off it like it does from a duck's back—that's why it's soak-proof. That's why it lasts for years—why it don't shrivel or warp, but instead, hardens and toughens like iron. Roofing that absorbs moisture, whether shingles or prepared material will soon give out; the swelling and contracting causes it to loosen and rot. The sun draws out with the evaporating moisture it's very life — it's wearing qualities—leaving a dead, tinder-like substance that soon becomes as easily soaked with moisture as a blanket. A test of **H. B. RUBBER ROOFING** soon proves it is best while the cost is very small.
\$1.25 Per Roll—108 Square Feet
 Just figure out what it would cost to cover the roof of your house, barn, shed, or poultry house, and then figure that it will outlast any other roofing and you'll find it the cheapest roofing ever put on. Can be laid over old shingles, the only tool necessary is a hammer. Requires no painting and does not taint the rain water. Suitable for any climate. Excellent for siding or lining purposes. Each Roll contains nails, caps and cement sufficient to lay it. Comes in three thicknesses. One-ply \$1.25 two-ply \$1.90 three-ply \$2.75 per square of 108 sq. ft. **SEND FOR BOOKLET "A" & FREE SAMPLES.**

RIGG'S HOUDANS.

DRIFTWOOD FARM,

GIRDLETREE, Md., Dec. 17, 1904.

Thos. F. Rigg, Iowa Falls, Iowa.
 Dear Sir: In 1898 I obtained in Colorado three Houdans that were purchased of you. I took them to Brazil, where they were practically unbeaten by the best English strains, to say nothing of breeding a lot of youngsters that hustled their Minorcas in egg production.

WALDO KENNARD.

This strain of Houdans has been linebred for more than thirty-one years. They supply winners at all the leading shows annually. They are large, vigorous, great egg producers and always winners. Note Mr. Rigg's announcement in another column.

Scribner's Magazine for February contains the first installment of a new lot of letters by "A Diplomat's Wife"—Mary King Waddington. These are Mme. Waddington's vivid record of a visit to Italy in 1880, just after M. Waddington had resigned the Prime Ministership in France. They were received in Rome with the greatest distinction, and these letters give a picture of the Court life of that day, and are fully illustrated from portraits and photographs.

D. S. Lovejoy, Elgin, Ill., an old time exhibitor of Buff Cochins and Partridge Wyandottes, has several good cockerels and pullets for sale. Write him and get his low prices on stock and eggs.

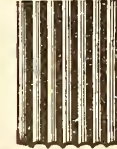

G. A. Gibson, Hector, Minn., entered sixteen Buff Orpingtons at the great Minneapolis show and won fifteen prizes, including best display; won six firsts out of a possible seven. Mr. Gibson is offering eggs from these winners.

BUFF PLYMOUTH ROCKS.

Where are we at? Are we working to produce Buff Rocks with buff color throughout, or are we simply trying to get an even surface colored body, regardless of black or white on wings and tail? For instance, if a bird has an even surface colored body and black or white on wings and tail, and another bird is solid buff throughout but not quite so even in surface color, which should have the preference? **MARSHALL E. KEIG.**
 Romeoville, Ill.

I had a pullet which scored 89. Next season as a hen it scored 93—same judge. Same season cock bird scoring 89, this season 93—same judge. Both birds in pink of condition both times. Can any judge score all classes of birds in show room in his class and be any where near correct? I claim it cannot be done.
D. S. LOVEJOY.
 Elgin, Ill.

Steel Roofing 100 Square Feet, \$2.00

WE PAY FREIGHT EAST OF COLORADO
 Except Oklahoma, Indian Territory and Texas. Strictly new, perfect steel sheets, 6 and 8 feet long. The best roofing, siding or ceiling you can use; painted two sides.  85th & Iron Sts., Chicago.

THIS 100 lb. Sack of PAYNE'S Alfalmo Poultry Food

Costs you but \$2.50. It will bring you 50 per cent on the investment in 30 days from the date you begin feeding it. Sounds like a strong statement, but here's the evidence from a practical poultryman that backs it up:

Manning, Iowa.

Alfalmo Meal Co.,

Gentlemen: In eight days feeding your Alfalmo Poultry Food several coops of my chickens made a gain of 17 per cent in weight. In 16 days they gained 26 per cent. Alfalmo Poultry Food formed one-fourth of the fattening ration, serving as a green, appetizing feed to balance the ration and keeps the birds healthy.
W. B. PARROTT.

"The proof of the puddin' is in the eatin' of it." We don't ask you to take our word as to what Alfalmo Poultry Food will do—nor even the word of those who use it. We want you to try it for yourself. Order a 100 lb. sack—feed 50 lbs. of it—if it don't do all we say it will, return the remaining 50 lbs. and we will refund the full price you paid for the 100 lbs. If you don't want to order as much as 100 lbs., order a 50 lb. sack for \$1.50, the same offer will hold good in either case. **We know what it will do.** Our object in making this offer is to make it easy for you to find out what it will do. Order a sack and make the test at our expense. Ask us to send you, free, a copy of our valuable book, "Poultry Pointers," handsomely illustrated and full of money-saving hints for the poultry-keeper. Tells all about Alfalfa Products.

Shows, Associations and Clubs

Secretaries are requested to send us the latest news and announcements for this department.

BOSTON SHOW 1905.

For weather conditions the Boston show has had no equal this season.

Entries all told were 4,398 in number.

Light Brahmas as usual lead the line, followed by their darker brethren. Both classes showed very fine birds. Buff Cochins had very fine birds unplaced, while Partridge and Whites stood way up in quality. Several of the males were very heavily booted. The awards were well placed throughout the Asiatic classes.

Barred Plymouth Rocks, a long string, numbering 114, in open classes. White Rocks 82, and some very fine ones, especially first pullet, which was a dandy. Buffs showed some very fine even coloring and quite a long string too.

Wyandottes in silver, golden, whites, black, buff and partridge numbered all told over 400 birds. R. I. Reds in single and rose combs showed a total of 197 birds and a strong string they were.

But the kingpin for quality was the Dorking classes. Never in this country and on good authority I should say,

neither in the old country, has such quality been brought together. It was as grand a lot of birds as one would wish to see anywhere. Our old friend Mr. Henry Hales says he never saw such fine birds in competition before.

In the Orpington classes the whites were shown by two exhibitors, and it was easy placing the ribbons, if only on condition birds were shown in, one lot looking as if they were picked from a manure heap and sent to the show room with absolutely no preparation. In Leghorns the whites as usual, showed largest entries.

Hamburgs brought out some extra fine ones in silver spangled Indian games. First cock came all the way from Fruitvale, Cal., to compete.

In Houdans there was some very fine specimens competing for the club special for best cock. This ribbon was the finest in the show, being very large and exceedingly handsome. First cock won all specials including the \$100 Champion Challenge Cup.

He was a finely colored and crested bird of good size and style. Second was a similar bird, but not quite so large. First hen large in body and fine shape

and crest, winning special for color and shape. Second also fine.

First, second and third cockerels easy winners and grand good birds, while first, second and third pullets were pronounced by every breeder present to be the finest Houdan pullets ever shown.

Bantam classes were full of beauties and I don't envy the judge his job on this lot. Pigeons were placed mostly on the Huntington avenue side of the hall and were a great attraction to the visitors.

If the specialty clubs on standard poultry offered such specials as do the pigeon fanciers, you could not find a hall large enough to coop the exhibit.

I really believe that the incubator and brooder display has never been equaled in Boston or New York before. Supplies of all kinds from grit to poultry houses were very much in evidence.

The poultry press was represented by Farm Poultry, Feather, New England Poultry Journal, Advocate, Reliable Poultry Journal and American Poultry Journal

CHAS. H. WARD.

DAVIS' GOLDEN WYANDOTTES Win

In what is acknowledged to be the strongest class of Golden Wyandottes ever assembled in a show room, January 23-28, 1905, eight of the Best Golden Wyandotte breeders of the country, from east, west and center, exhibited at Chicago. Our winnings in such company, T. E. Orr as judge, were 1st hen, 1st pullet, 1st pen, 2nd ck. 3rd pullet, 4th ck. and two of the three cups given by the National Golden Wyandotte Club. Our matings this year are as fine as ever and we will spare a few eggs at \$3.00 per 13, \$5.00 per 26, same pens we use ourselves. Choice stock for sale at reasonable prices. Box 20.

A. W. DAVIS, Big Rock, Ill.

Grow Better Fruit

Learn from expert orchardists, berry-growers, spraying authorities and other practical men whose experience ranks them as authorities in fruit culture.

Such men are regular contributors to that "handsomest of farm papers"

THE FRUIT-GROWER

ST JOSEPH MISSOURI
50c A YEAR

Never dry or sleepy—always "meaty" and wide awake. During 1905 Special Editions will be devoted to "Spraying," "Gardening," "Small Fruits" and "Apples." Our Bro. Jonathan series of 10 fruit booklets on "Orcharding," "Small Fruits," etc., at 25c each, are dollar-makers for fruit-growers. Ask how to get them free. Send 25c and names of 10 persons interested in fruit-growing for a year's trial. Eastern Edition for States east of Ohio.

THE FRUIT-GROWER CO.
907 S. 7th, St. Joseph, Mo.

Salzer's Home Builder Corn.

So named because 50 acres produced so heavily, that its proceeds built a lovely home. See Salzer's catalog. Yielded in Ind. 157 bu., Ohio 160 bu., Tenn. 198 bu., and in Mich. 220 bu. per acre. You can beat this record in 1905.

WHAT DO YOU THINK OF THESE YIELDS?

120 bu. Beardless Barley per acre.
310 bu. Salzer's New National Oats per A.
80 bu. Salzer Speltz and Macaroni Wheat.
1,000 bu. Pedigree Potatoes per acre.
14 tons of rich Billion Dollar Grass Hay.
60,000 lbs. Victoria Rape for sheep—per A.
160,000 lbs. Teosinte, the fodder wonder.
54,000 lbs. Salzer's Superior Fodder Corn—rich, juicy fodder, per A.

Now such yields you can have in 1905, if you will plant my seeds.

JUST SEND THIS NOTICE AND 10c in stamps to John A. Salzer Seed Co., La Crosse, Wis., and receive their great catalog and lots of farm seed samples. [F.P.]

WALTHAM WATCHES

ALWAYS FAITHFUL

The progress in watch manufacturing
is shown in "No. 820" and "V,"
which are two sizes of low-priced,
durable, close-running, 15-jeweled
watch movements. Both fully guaran-
teed. They will not get out of order.

"No. 820"

For Men

"V"

For Women

For sale by all Jewelers

AMERICAN WALTHAM WATCH COMPANY,
WALTHAM, MASS.

No. 1 SINGLE ROOST STYLE

Get Ready—They're Coming.

Millions of mites will come with the hot weather to suck the
life blood of your flock. Don't wait until your fowls are in-
fested with vermin and your busy season is on before installing
our anti-louse roost fixtures, which will effectually prevent their ravages.

Davis Anti-Louse Roost Brackets

make it impossible for them to get onto the perches from the wall or to wall from
perch without getting trapped in the oil cups which catch them by thousands.
Most convenient and practical and the only bracket made that lifts up out of the
way for cleaning dropping board, painting underside of roosts, etc. More
eggs and increased vitality of chicks and fowls will result from their use.

Prices: No. 1 or single roost style with screws, 75c per pair; 3 pair, \$2.00; 6 pair,
\$3.50; 12 pair, \$6.25. No. 2 or multiple roost style complete with chains and screws
\$1.25 per set; 3 set, \$3.25; 6 set, \$6.00; 12 set, \$11.50; f. o. b. Battle Creek, Mich. Cir-
cular free. Ask your supply dealer for them. Order today. Don't wait. Do it now.

The Keyes-Davis Co., Ltd., Mfrs., Dept. B, Battle Creek, Mich.

No. 2 MULTIPLE ROOST STYLE

The Great Question

for the next few months will be, "What Incubator shall
I buy?" If we could talk with you face to face and
explain the many advantages of the

Perfected Von Culin

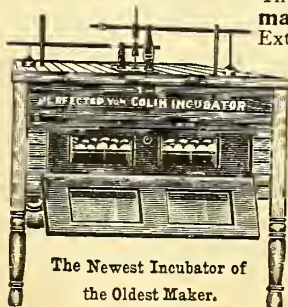

the question would be answered most satisfactorily to us both. This ma-
chine is the result of practical experiments and tests extending over a
period of 30 years. The inventor Mr. C. Von Culin is widely known as a
pioneer in incubation. He built his first machine in 1873 and has been
continuously in the manufacture of incubators and brooders ever since 1885.

The result is the most perfect and simplest
machine on the market. Kiln-dried Lumber,

Extra Thick and Packed Double Walls, Full
Sized Heaters, Metal Safety Lamp, Improved Ther-
mostat absolutely controls heat, Tested Thermome-
ters, and a first class Egg Tester. It takes only about
1/4 as much oil to run this machine and your hatches
will run about 20 per cent higher. A big saving
every year. You won't quarrel with the price.

Our "Boiled Down" Catalogue tells you
what you want to know, simply and in the fewest
possible words. It is a time saver. We send it
free. Write to-day.

WAYLAND INCUBATOR & MFG. CO., Box 53, WAYLAND, N. Y.
Sole Makers of Von Culin Incubators and Brooders.

The Newest Incubator of
the Oldest Maker.

BROWN RED GAME.—W. H. Thompson, Cock 1, Hen 1, Pullet 1-2.

Twelve Years of Continual Winning

Great Chicago Show, Jan. 22-28, 1905

Opens our twelfth season's business, and like all former years, with a noted record. The largest class of Silver and Golden Wyandottes ever brought to a Chicago show was there, and quality that surpasses any former show on record.

14 Regular Prizes on Wyandottes 14

Is not a bad opening for 1905; more than any two exhibitors in the classes, including the grand sweepstakes special, best display in Wyandotte classes, challenge cup, largest and best display in American class. \$100 cup for largest and best display in the show. These are only tokens of annual congratulations, which are renewed year after year, and proof to the public that

JONES, THE WYANDOTTE MAN

has the strongest blood lines on earth. If you need a male bird, trio or pen that is bred right, don't make a mistake in your purchase. Get the best; I will mate them ready to breed. You get my experience which has cost me these years of hard study and work. Bred to lay, bred to pay, bred to win. Exceptionally fine lot of birds to sell.

Silver, Golden and W. Wyandottes, G. S. and S. S. Bantams

EGGS FOR HATCHING

Our pens are mated up. Can furnish you from same pens we hatch from. Choice of pens \$5 per 15. All pens \$3 per 13, \$5 per 26, \$15 per hundred.

Don't fail to send for our big catalogue, the grandest work of art ever published, a book worthy a place in any library. It tells all about Wyandottes, with full description of The Pines, the largest Wyandotte farm in the world. Send four cents in stamps for mailing.

Imported and American Bred Scotch Collies. Three Fine Litters Ready to Ship.

R. E. JONES "The Pines,"

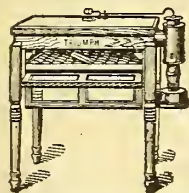

R F D 5, Paducah, Ky.

PRINTING!

Our work is the best. Our prices low. We prepay Express charges. We print everything in the Poultryman's line and guarantee satisfaction. Send for samples of our work, sheet of Poultry Cuts, etc.

WILL H. SCHADT, Dept. B, GOSHEN, IND.

Triumph Incubators

transform every fertile egg into a strong, lively chick. No guess work; they are thoroughly tested. Built very durably, having heavy double walls and doors, copper tanks, safety lamps, nursery, is positive self regulating, unexcelled system of ventilation and moisture prevents chicks dying in the shell. It is simple, easy to operate, no night watching and our prices are very low. Most valuable res not found in others. Triumph Brooders are life savers. All machines sold under strongest guarantee. Don't waste time, money and eggs with a poor machine. Try the Triumph for 30 days free and return if you don't like it. 35 varieties of fine poultry. Eggs and fowls for sale. Catalogue free.

E. F. NEUBERT, Box 844, Mankato, Minn.

WEST MICHIGAN TREES

are "bred for bearing." That's why we cut all buds from the best fruited, bearing trees. It also insures stock true to name and variety. Over three million trees—913 acres. All new and standard varieties of Apple, Peach, Pear, Plum, Quince, etc. Also ornamental trees and shrubs. We sell direct at wholesale prices. Illustrated catalogue free.

THE RURAL NEW-YORKER
310 Pearl Street, New York.

FOURTEENTH ANNUAL MEETING AMERICAN PLYMOUTH ROCK CLUB.

The fourteenth annual meeting of the American Plymouth Rock Club was held at Madison Square Garden, New York, Jan. 4, 1905, with thirty-seven members present.

The following officers were elected: President, W. S. Russell, Ottumwa, Ia.; vice-presidents, E. B. Thompson, J. F. Crangle, D. T. Heimlich, J. M. Rapp, B. S. Davis, E. L. Miles, T. L. Norval; secretary and treasurer, H. P. Schwab, Rochester, N. Y.; executive committee, A. C. Smith, C. H. Welles, H. S. Fletcher, Chas. McClave, F. H. Schallebarger, M. F. Delano, J. G. Goodwin, W. B. Alexander, H. P. Rankin.

The officers report shows the club to be prosperous with \$107.36 in the treasury.

One hundred and twenty-six applications for membership were received and approved. The secretary was authorized to issue life membership cards to members desiring same at \$10. There are now over 1,200 annual members enrolled.

The 1905 catalogue is just out and is the superior of any ever issued. It contains up-to-date articles of great value to those interested. It is mailed free for 4 cents postage.

We take this opportunity to urge all the friends of the Barred Plymouth Rocks not enrolled to do so now, the fee is \$1, annual dues the same; by so doing you aid our object in furthering the interest of the breed and enable us to carry on the work we have been doing. Come with us now and we will surely appreciate your company, and you ours.

H. P. SCHWAB,
Secretary and Treasurer.

Rochester, N. Y.

THE CHARLOTTE POULTRY SHOW.

Editor AMERICAN POULTRY JOURNAL:

The Charlotte, N. C., poultry exhibit was held Jan. 14-20, 1905, and was, I believe, one of the very largest and most successful ever held in the south. It was one of the best I had ever seen

either north or south. The quality of the stock shown was of the very best as a rule, while in all the principal classes there were many birds of exceptional merit. This can be said of the Barred and White Rocks, the Wyandottes and Leghorns. It was my duty besides meeting some of the most interesting fanciers I have ever met to score every one of the 1,000 or more birds there, so ought to be qualified to make above assertions.

Competition was as a rule very strong. There were 237 Barred Rocks, 69 White Rocks, 84 W. Wyandottes, 42 S. L. Wyandottes, 72 S. C. White Leghorns, 117 S. C. Brown Leghorns, 47 Black Minorcas, etc. Would be pleased to see these breeders and their birds at New York; am sure the comparison would be favorable and a credit to them.

The South is surely making rapid strides and the ranks of the fanciers are doubling yearly, there are many possibilities there with thoroughbred poultry and the breeders are awake to these.

With best wishes for success to our friends of the Southland.

H. P. SCHWAB.

MEETING OF BUFF LEGHORN CLUB.

The annual meeting of this club was held at Madison Square Garden, New York City, at 2 p. m., Jan. 5, '05, and was well attended, the following members taking an active part: Thomas Peer, Aug. D. Arnold, E. G. Wyckoff, Herbert W. Smith, Wm. Campbell, Frank I. Bennett, John I. Craig, R. N. Jacobus. Herbert W. Smith was elected secretary pro tem, President Peer in the chair.

The report of the treasurer showed a balance on hand after paying expenses and for 15 silver cups and 200 ribbons that were offered at the different shows this winter.

E. G. Wyckoff moved that the club furnish each member with a club button, which was carried.

Moved and carried that a vote of thanks be extended to the secretary.

It was decided at this meeting that the club make every effort next winter

in offering many valuable specials to be competed for by its members only.

The following officers were elected for the ensuing year:

President, Thomas Peer, Fairfield, N. J.; eastern vice-president, E. G. Wyckoff, Ithaca, N. Y.; middle vice-president, S. M. Keltner, Anderson, Ind.; western vice-president, Gene M. Simpson, Corvallis, Oregon.

Secretary and treasurer, Geo. S. Barnes, Battle Creek, Mich.

Executive committee, Aug. D. Arnold, Dillsburg, Pa.; Nate K. Cornwall, Thamesville, Ont., Can.; Chas. L. Thayer, Chicago, Ill.

Honorary vicepresidents, James Dundas, Deer Park, Ont.; J. A. Harron, Berlin, Ont.; F. E. Olson, Galva, Ill.; Chas. A. Reber, West Liberty, Ill.; F. E. Clarke, Chicago, Ill.; T. J. Walp, Quakertown, Pa.; Chas. Fluhrue, Aspinwall, Pa.; E. Wardle, Venetia, Pa.; Frank I. Bennett, Point Pleasant, N. J.; John I. Craig, Arlington, N. J.; Wm. T. Krepps, Grand Rapids, Mich.; B. W. Fellows, Big Rapids, Mich.; Carl W. Lenz, Dayton, Ohio; W. H. Maxwell, Topeka, Kans.; Robert Coutts, Moscow, Idaho; L. B. Zeil, Milton, Oregon; Ed Schoel, Albany, Oregon; B. C. Garmon, East Lake, Ala.; F. S. Zwick, Seymour, Conn.; G. W. Gilliam, Monteagle, Tenn.; P. A. Walker, Cleveland, Tenn.; Wes. Loser, Terre Haute, Ind.; John B. Krue, St. Joseph's Hill, Ind.; Chas. H. Clough, Olympia, Wash.; Chas. B. Reed, Malaga, Wash.; A. T. Lindgren, Kingsburg, Calif.; G. Paul Pitt, Watertown, S. Dak.; Chas. White, Aurora, Neb.; P. W. Fenelon, Galveston, Texas; Len Lanius, College Hill, Ohio; Sylvester Shirley, Fort Clinton, Ohio; Josiah Fitz 4th, Lynn, Mass.; Geo. H. Woolnough, Arlington Heights, Mass.; John P. Robertson, Florence, Colo.; J. M. Hill, Colorado Springs, Colo.; Irving Wheatcroft, Wheatcroft, Ky.; Geo. W. Seymour, Louisville, Ky.; Wm. L. Howell, Gene-seo, N. Y.; Mrs. C. W. Harrington, Harford Mills, N. Y.; Russel J. Crane, West Haven, Conn.; Geo. Harnden, East Onondaga, N. Y.; J. S. Hughes, Fayette, Mo.; R. Ferrenback, St. Louis, Mo.; H. L. Haff, Beloit, Wis.; W. M. Bean, Anoka, Minn.

9 big strong chicks for every 10 eggs set! This is the record from 1000 eggs.

50 per cent. more chicks in actual results

reported from the Atlantic to the Rockies and from the Lakes to Florida. No two under same atmospheric conditions.

NOT A DROP OF MOISTURE IN ANY HATCH.

As poultrymen appreciate the fact that it's wrong and contrary to every known law of Nature to push a tray full of eggs into an Incubator beneath a tank, or pipes, or radiator glimmering with a dry heat that shrivels and dries the life out of an egg, they buy The New Method. Our factory is running day and night to fill orders for New Method Incubators, Brooders, Poultry and Chick Food.

To those who desire to get away from the failings of the old fashioned Incubator with its uncertainty and guesswork, we will send catalogue for two-cent stamp that will put them in touch with **greater possibilities** in Poultry Culture and outline our **three months' plan of doing business. Stop drying eggs instead of hatching. BUY A NEW METHOD.**

The New Method Incubator Co., Box 32 Morrow, O.

The
New
Method
Incubator.
A Record
Unparalleled!

Officers of the club met at the Coliseum at Chicago, and several important matters were discussed, it being their opinion that another catalogue should be issued this fall. The secretary has about 100 books left which will be sent to any one asking for it, free of charge. Now is the time to join and get your name in the catalogue.

GEO. S. BARNES, Sec.

**THE SIXTH ANNUAL MEETING
OF THE NATIONAL WHITE
WYANDOTTE CLUB.**

The sixth annual meeting of the National White Wyandotte Club was held at Madison Square Garden, New York City, Jan. 5, 1905, with President M. F. Delano in the chair. There were over forty members in attendance.

It was decided that a committee of seven, including the president and secretary, be appointed to make necessary arrangements for establishing state organizations, and that this committee suggest the changes that will be necessary in the by-laws and present the same to the club for action in the proper manner.

The secretary was instructed to get propositions from the large western shows for holding the next annual meeting with them, and to leave the place of meeting to a vote of all members of the club. Such vote to be taken before October 1, 1905.

The secretary was instructed to send out the proceedings of this meeting, with the new club catalogue.

On motion, the matter of who should judge the White Wyandotte class at the next annual meeting, was left to the executive committee.

The secretary read a letter from the officers of the Kansas White Wyandotte Club showing what is being done by the White Wyandotte Club of that state. Also, a letter from the secretary of the Brockton, Mass., show, asking the club to hold a state meeting there in connection with their show, December 13-16, 1905.

The treasurer read his report, showing a cash balance of \$262.55. The report was accepted and ordered filed.

The election of officers for 1905 was then held, with the following results: M. F. Delano, president, Millville, N. J.; Horace Havemeyer, vice-president, Stamford, Conn.; Ross C. H. Hallock, secretary and treasurer, St. Louis, Mo. Executive committee: Alfred E. Elwell, West Mentor, Ohio; W. H. Bates, Rockville Center, Long Island; W. R. Graves, Springfield, Mass., and the president and secretary of the club.

AMERICAN HOUDAN CLUB.

The annual meeting of the American Houdan Club was held at Boston, Jan. 20th and elected the following officers: President, Rev. C. E. Peterson, Franklin, Me.; vice-president, F. W. McKenzie, Concord, Mich.; secretary-treasurer, D. P. Shove, Fall River, Mass.; executive committee, T. F. Rigg, Iowa Falls, Iowa; B. Bement, Lockport, N. Y.; W. E. Smith, Springfield, Mass.; L. W. Borden, Fall River, Mass.; S. D. Lance, Troy, Ohio.

It was voted to offer special club ribbons at all the leading exhibitions. The officers hope by offering special prizes, and by having the breeders and all

others who are interested in the Houdans, to co-operate by joining the club, and by so doing there will be better Houdans and more of them at all of our poultry shows.

Send one dollar to the secretary and help bring out more of these beautiful birds.

SALAMANCA, N. Y.

The fifth annual exhibition of the Cattaraugus County Poultry and Pet Stock Association, held at Salamanca, N. Y., Jan. 24-27, 1905, was a grand success in every respect, and the association has decided to hold their next show at Salamanca, Jan. 22-25, 1906. J. B. Swan, secretary.

ENID, OKLA.

The Enid Poultry and Pet Stock Association held a very successful show at Enid, Okla., Jan. 25-28, 1905.

BELLE FOURCHE, S. D.

The first annual exhibition of the Black Hills Poultry Association was a success, notwithstanding the extremely cold weather. The entries were limited, but what they lacked in quantity was made up in quality.

EMPORIA, KAN.

The Emporia Fanciers' Club held their third annual exhibition at Emporia, Kan., Jan. 24 to 28, 1905. The weather was very cold the first and second day, but it seems the breeders of fancy poultry do not stop for cold weather as there were more birds on exhibition than last year and the quality as remarked by different visitors was better.

C. A. Emry of Carthage, Mo., did the scoring and gave entire satisfaction.

ROCKFORD, ILL.

The Rockford Poultry and Pet Stock Association held a very successful show Jan. 16-21, 1905, all the classes being well filled.

ANGOLA, IND.

The fourth annual exhibition of the Tri-State Poultry and Pet Stock Association, held at Angola, Ind., was a success, both socially and financially. All varieties were represented, there being nearly 500 entries.

OLNEY, ILL.

The Richland County Poultry Association held a most successful exhibition at Olney, Ill., Jan. 26, 1905. Chas. McClave did the judging, and gave entire satisfaction. There were 503 entries.

The eighth annual meeting of the American Buff Plymouth Rock Club was held in Madison Square Garden, Jan. 4, 1905.

In the absence of the president and vice-presidents the meeting was presided over by A. C. Hawkins. The following officers were elected for the present year—President, Mr. A. C. Hawkins; western vice-president, Mr. B. E. Johnson; eastern vice-president, Mr. C. L. Pensyl; secretary and treasurer, Mr. W. C. Denny; executive committee, Messrs. M. F. Delano, C. A. Morton and F. C. Shepherd, in addition to the president and secretary.

The secretary's report shows the club to be actively interested in the advancement of the variety. In addition to the silver cup and ribbons offered by Madison Square Garden, silver cups were offered at Fostoria, O., Peoria, Ill., Detroit, Mich., Moberly, Mo., Letitz, Pa., Raleigh, N. C., Webster City, Iowa, Middletown, Conn., Boston, Mass., and Schenectady, N. Y.

Every breeder who is not a member of the club should join at once. Send 3c stamp for fine catalogue published last season to

Deafness Can Be Cured

**I Have Made the Most Marvelous Discovery
for the Positive Cure of Deafness and
Head Noises and I Give the
Secret Free.**

**With this Wonderful Mysterious Power I
Have Made People Deaf for Years Hear
the Tick of a Watch in a Few Minutes**

**Send Me no Money—Simply Write Me About
Your Case and I Send You the Secret
by Return Mail Absolutely Free.**

After years of research along the lines of the deeper scientific mysteries of the occult and invisible of Nature-forces I have found the cause and cure of deafness and head noises, and I have been enabled by this same mysterious knowledge and power to give to many unfortunate and suffering persons perfect hearing

**I Have Demonstrated That Deafness Can
be Cured—Dr. Guy Clifford Powell.**

again; and I say to those who have thrown away their money on cheap apparatus, salves, air pumps, washes, douches, and the list of innumerable trash that is offered the public through flaming advertisements, I can and will cure you to stay cured. I ask no money. My treatment method is one that is so simple it can be used in your own home. You can investigate fully, absolutely free and you pay for it only after you are thoroughly convinced that it will cure you, as it has others. It seems to make no difference with this marvelous new method how long you have been deaf nor what caused your deafness, this new treatment will restore your hearing quickly and permanently. No matter how many remedies have failed you—no matter how many doctors have pronounced your case hopeless, this new magic method of treatment will cure you. I prove this to your entire satisfaction before you pay a cent for it. Write today and I will send you full information absolutely free by return mail. Address, Dr. Guy Clifford Powell, 1867 Auditorium Building, Peoria, Ill. Remember, send no money—simply your name and address. You will receive an immediate answer and full information by return mail.

GOOD POULTRY HOUSES.

Adequate protection from the weather—warmth in winter when eggs are high—is one of the first principles of poultry success, but at the same time the poultryman builds the best house for the money and is looking for the best roofing for the money. In poultry raising, as in everything else, it is just as important to keep down expenses as it is to increase the profit. Profit comes from both directions.

A large number of leading poultry-

men have solved this problem completely to their own satisfaction by the use of Paroid Roofing, made by F. W. Bird & Son, East Walpole, Mass. It must not be confused with tar or cheap imitation roofings. It contains no tar. It can be laid by anyone, in any kind of weather. It does not "buckle" nor "run"; presents an extremely neat appearance and costs comparatively little.

Our illustration shows the well known Meadow Brook Farm at Dallas, Pa., where Paroid Roofing is used for all poultry buildings with gratifying success.

Other prominent users of Paroid are D. J. Lambert and Weber Bros., who own the largest duck farms in the world. We believe that this is a proposition that every one of our readers should investigate. F. W. Bird & Son are one of the oldest firms in the country, having been established in 1817. They manufacture the roofing throughout in their own mills and have an enviable reputation for living up to every promise they make to their customers. Send for their booklet, "Building Economy." You will be interested in it. It will save you money.

CHICAGO POULTRY SUPPLY HOUSE.

Owing to the large increase in business the Chicago Poultry Supply House has increased their floor space at their office and warehouse and are in a position to ship anything in the line of poultry supplies on short notice. They are the western agents for the famous "Model" incubators, manufactured by Chas. A. Cyphers; Star White Washing Machines (known to be the best made); Rouse & Story Brooder; Morris' Poultry Cure, Conkey's Roup Cure, Drinking Fountains, Bone Cutters, Lice Killer, in fact, anything useful for the up-to-date poultry man.

Here is a place where you can obtain expert advice on poultry culture.

Mr. Fred J. Phillips, manager of the Chicago Poultry Supply House, 607 Lakeside Building, corner Clark and Adams streets, is a successful, practical poultry man and incubator expert, with several years' experience, and has a national reputation as breeder of R. C. W. Leghorns.

HOW TO BREED UP TO THE TOP.

Engage early setters from your neighbors, furnish them fertile eggs from your best pens. Pay them above market price to get them interested. Let them bring the chicks to you for their pay

when they weigh about three pounds. You will find in every brood a few that are larger, thriftier, saucy and greedy. Cull these fine chaps out; mark their toes. When you select pullets next year for your breeding pens use these pullets. Next year you will not have so many culls. I have plenty of neighbors that like to raise chicks for me.

ORVILLE D. CHINN.

Kehoe, Ky.

Turkey broilers, it is said, must be about six pounds in weight, the poult excelling for this purpose. It is claimed that it makes the most delicious, juicy broiler that an epicure can fancy.

BLANCHARD'S WHITE LEGHORNS

are no experiment, having been carefully selected and bred for over twenty years. No labor or expense has been spared in building up and perfecting this strain, and while the production of large, pure white, fancy market eggs has been the main object, **standard qualities have not been neglected.** They are large, vigorous, active and handsome. Good winter layers and keep at it all summer. Unexcelled for introducing new blood or as foundation stock. Stock for sale. **Eggs for Hatching** \$2.00 per 15, \$3.75 per 30, \$5.00 per 45, \$10.00 per 100. From winners pen \$3.00 per 15, \$5.00 per 30. Illustrated circular free

**No Better Anywhere
At Any Price.**

BETTER THAN A GUARANTEE.

Better than a guarantee, which may be nothing but boastful words. Better than the experience of others, which in many cases is exceptional, is the actual test of a thing for yourself. The experience of others is good, of course, as an indication of what one may expect, but to *know* a thing for oneself is the knowledge that is valuable and helpful.

Mr. S. L. Hirschey, of the Climax Incubator & Brooder Co., Castorland, N. Y., has been making and selling a brooder for a number of years under the name of "Climax" which has gained a world-wide reputation. It won the highest awards at the Pan-American Exposition at Buffalo and at the Industrial Exposition at Toronto, Canada, in 1902, besides being adopted by many state institutions in preference to all others. His company makes an incubator, also under the name "Climax," which has met with just as marked successes as the Climax brooder. The company is unique, however, in that it does not try to sell its products on reputation alone, but sells every machine strictly on its merits.

The manufacturers plan to sell every incubator and every brooder that leaves their factory direct to the customer, and to sell it on a 60 days' free trial plan—giving two whole months to test them in actual operation, to prove to the entire satisfaction of the purchaser that the machine is just what it should be and that the purchaser can use it and make money. Climax incubators and brooders are not cheap, trashy machines, but are well-built, practical hatchers and brooders with special features adapting them to beginners as well as to the particular needs of large poultry raisers. Before buying a machine it will be wise to send for their new catalogue and learn all about this 60 days' free trial plan—it may save you a lot of disappointment; it will certainly insure you a lot of satisfaction.

Address all inquiries to the Climax Incubator & Brooder Co., Castorland, N. Y.

WINNINGS OF THE PINES, CHICAGO, JAN. 22-28, 1905.

The Wyandottes at the great Chicago show, January 22-28, were the best lot of birds ever shown in one show. World's Fair not excepted. It was a settled fact among all exhibitors that the quality was better than at any previous show on record. In quantity the Silvers and Goldenes were the largest classes ever exhibited at a Chicago show, they being close to the Whites in numbers. Jones' Wyandottes from The Pines, Paducah, Ky., won: Silver Wyandottes, cock, first and fourth; hens, second, third and fourth; cockerel, third; pullet, fourth; pens, second, fourth and fifth. Golden Wyandottes, hen, second; cockerel, third; pullet, fifth; pen, third. Specials—\$100 silver cup for largest and best display in the show; challenge cup for largest and best display in the American class; silver challenge cup for largest and best display in the Wyandotte classes.

E. H. Gaines, of Gaffney, S. C., won on his White Plymouth Rocks as follows: The State Fair, Columbia, S. C., Nov. 25 to 28, 1904—First cock, second hen, second cockerel, first and second pens. Charleston, S. C., November 21 to 26, 1904—Pullets, first, second, third, tie fourth; hens third. Atlanta, Ga., January 4 to 11, 1905—First and third pullets, third and fifth hens, third and fifth pens. Ivory soap special \$25 silver cup for best white bird, any age, sex or variety. American White Plymouth Rock Club special silk ribbon for best pullet in the show.

O. E. Michael, Dayton, Ohio, won as follows on his S. C. B. Leghorns at Greenfield, Ohio, January 10-16, 1905: First cock, first and third hen, first cockerel, first and second pullet, first pen; specials for best trio and best cockerel.

Doolittle's Worlds Fair Winners

1st Hen, 1st Pullet, 1st Cock, 2d Cck, World's Fair 1904.

At the grandest and most gigantic Poultry Show to date, with practically 9,000 birds on exhibition, including Partridge Wyandottes from twelve states, viz: Pennsylvania, New Jersey, Ohio, Iowa, New York, Illinois, Tennessee, Connecticut, Indiana, Nebraska, Missouri and Kansas my birds won eleven prizes on ten entries, including 1st Hen, 1st Cockerel, 1st Pullet, 2nd Cock and 3 specials, best shaped female, best colored female, best colored male. Who can beat it with 10 entries on a single variety?

Send 10c for my 1905 catalogue which is without doubt the most complete catalogue issued to date of this variety. It contains a color plate, taken from life, of a pair of Partridge Wyandottes, suitable for framing; the female represented in this being the first prize hen at the St. Louis World's Fair 1904. This catalog also contains a brief history of the variety telling how to mate for best results and is full of information from cover to cover.

The 10c is to cover cost of the color plate. Mention American Poultry Journal.

A FLOURISHING ENTERPRISE.

A business career of nineteen successful years is something any firm may look back upon with pardonable pride. And, when to the achievements of the past is added the more progressive methods of the present, the outlook for the future assumes a most promising prospect. Nineteen years is certainly a sufficient length of time in which to test public sentiment and appreciation, so much so that the proprietor of "The German Nurseries," Mr. Carl Sonderegger, of Beatrice, Neb., may reasonably expect a continuation and steady growth of the patronage which has enabled him to not only carry on a successful business, but to so increase his facilities as to be able to handle a much larger trade than heretofore.

Mr. Sonderegger is not an advocate of the "something for nothing" policy. He believes that value received merits fair compensation and that it is better to build the reputation of his nurseries on the integrity of his stock rather than the amount offered at a certain price. Consequently, Mr. Sonderegger's new 1905 catalogue contains no offers of cheap seeds to equalize the quality and price. He does, however, make special prices and inducements to patrons which are worth considering by any who need nursery stock. His guarantee goes with his stock and every precaution is taken to insure arrival at destination in perfect condition. It will be well to note the prices and features of his 1905 spring and fall announcement before ordering.

THE BUCKEYE INCUBATOR CO.

For nearly a quarter of a century Mr. James Homan, the proprietor of the Buckeye Incubator Company, of Springfield, Ohio, has been a manufacturer of incubators and brooders. During this time he has made and sold upwards of 50,000, placing them in every quarter of the globe.

This could never have been done had there not been much merit in these machines; merit that has been proven by years of success.

Mr. Homan's idea is to put out an incubator that will meet the demand of the masses—not a high price machine, but a high grade at a low figure. This he is able to do possibly better than any other manufacturer, as he is located in the suburbs of Springfield, Ohio, where he owns and operates his plant, saving rent and many other expenses which are always paid for by the customer. There is no better arranged factory in the country than that of the Buckeye Incubator Company. After the lumber is taken from the drying room it never stops until it is brought to the warehouse a finished incubator or brooder ready to be shipped to some pleased customer.

Mr. Homan's advertising attracts attention for the reason that he makes the claim of 100 per cent hatches. This he can justly do, as he has in his possession thousands of testimonials proving his statement.

There is scarcely a locality where you cannot find a Buckeye. If you will consult the owner you will always find him pleased with the results he is getting and glad to explain to you its several points of merit. The company reports an excess of business this season over any previous year and they will send you, if you write them, their handsome catalogue, which explains more why this is so. Address The Buckeye Incubator Company, Springfield, Ohio.

FOR THE YOUNGSTERS.

The near approach of the season when these interesting little bundles of fluffiness, peep and pin feathers make their appearance in large numbers on the farms and in the poultry yards makes imperative the purchase of supplies for their consumption. While there are so many foods placed on the market this season, it is a pleasure to note the continued success of the old, reliable and well tried Harding's Baby Chick Food.

Something for nothing is a poor policy when the lives of your little chicks are in the balance. The intelligent poultryman will not be induced to buy a poor grade of chick food simply because it is cheap. It is results that tell and he knows it is poor economy to try and save money by losing chicks.

It is one thing to hatch chicks, but after they are hatched the problem is only just begun—to raise them is the next question, and if you would save your little chicks and a very large leak in your expenses don't neglect to include Harding's Uncle Sam Baby Chick Food in your next order for poultry supplies.

THE INCUBATOR AN EDUCATOR.

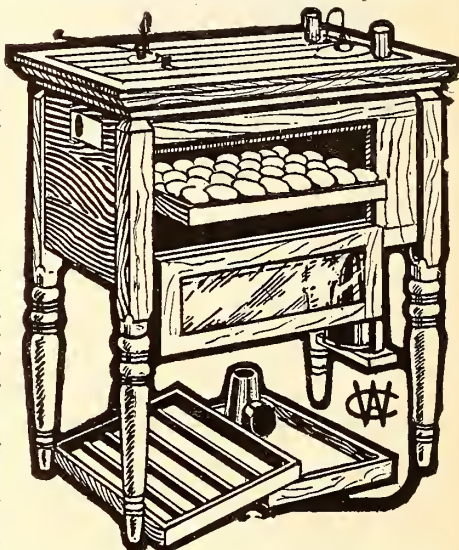

It's not a question nowadays whether incubators will hatch chicks. It's a question which one to buy. There are so many makes on the market that it is hard to give advice on any one special make.

Looking at the history of artificial incubation in America from a critical standpoint the name "Prairie State Incubator" stands identified intimately with its successive stages of progress.

The Prairie State system of incubation is an education. It is not a mass of superfluous head knowledge that never brings profit or pleasure to the possessor. It is a source of continuous profit and pleasure.

Any man, woman or child can apply the plain directions in the Prairie State book of directions and with a Prairie State Incubator and Brooder any farmer, villager, suburbanite or commercial poultryman can make money every day.

The Prairie State Incubator is easy to run. A few minutes' attention every morning and night is all it needs. It is easy to learn from the book of directions how to test the eggs, how to turn and air them, how to get big hatches from fertile eggs, how to avoid the mistakes made by others, and to profit by their successes. The Prairie State needs little attention. It attends to itself. Its regulator is trustworthy and unvarying. It prevents an interior change in temperature because its sensitiveness forestalls variations. The Prairie State system of

ventilation gives warm, fresh, vitalized oxygen to the eggs without endangering them by puffs of cold air either in center or corners.

The Prairie State has been a winner "from the start." From 1886, when Mr. Mix first put his incubator on the market and won the first prize at the great St. Louis show, to the present date, the Prairie State has been forging ahead—a steady winner. Three hundred and twenty-six of these prizes are recorded in the new catalogue with dates. The majority of these were not won by trained operators trained for the purpose, but by local poultry raisers. Some were farmers' wives—genuine poultry enthusiasts; some were storekeepers—some farmers. These enthusiastic people take their own machines in their own wagons. The Prairie State has fulfilled all their anticipations. It had not disappointed them. Consequently they were proud of their ability to select a machine that hatched 85, 90 and 95 per cent of the fertile eggs. Naturally they wanted to exhibit the machine.

The Prairie State catalogue is a library of information on every point for the education of beginners or experts in poultry raising. Any one can get one free from the Prairie State Incubator Company, Homer City, Pa.

Robert Larmer, of Stanberry, Mo., won on his Buff Plymouth Rocks at Chicago Show, Jan. 23, to 28, '05, as follows: 2nd pullet; 3rd hen; 5th cock. At Topeka, Kan., 1st cock; 2nd hen; 1st, 4th pullet; 2nd pen. The cock and hen that won at Chicago have been shown seven times, including Chicago, at the following places: St. Louis, Kansas City and Topeka, and have won every time. The cock winning five 1st, 2nd, 5th; hen five 1st, 2nd and 3rd, and also 4th in world class at St. Louis. This is certainly a fine record.

A 20TH CENTURY WONDER.

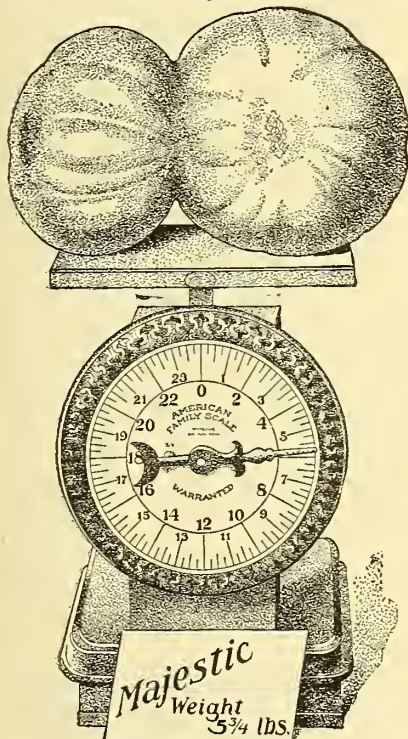

The Cycle Hatcher, a metal machine for hatching chickens, is styled a 20th century wonder. It embraces features not found in any other machine and is a new departure in the incubator world. It was designed to take the place of the hen and is offered as an improvement over wooden machines, embodying principles that cannot be attained with a wooden construction.

Being made entirely of metal and asbestos, it is absolutely fireproof, will not swell or shrink, and is not affected by varying conditions of atmosphere as wooden machines are. It is the result of years of experiments conducted by a practical poultryman with an ambition. His ambition was twofold; he wanted to make a metal machine that would get nearer to the moth-

er-hen conditions in the hatching process, and then he wanted to be able to sell that machine for \$5. Five dollars is a nice, easy price to pay; it's even money and, while it don't leave the manufacturer much profit, he figured that people could afford to buy several of them. In fact, his experience with hatching machines convinced him that three 50-egg incubators were better than one with 150-egg capacity. His reasons for this are interesting and fully set forth in the catalogue advertising this machine.

The Cycle Hatcher, sold for \$5, is a complete machine and includes everything necessary to hatch eggs but the oil. It is made by the Cycle Hatcher Company, of Salem, N. Y., who would like to place a copy of their new catalogue in the hands of every poultry raiser and everybody interested in hatching chickens. They will send it free to all applicants; simply mention this paper when you write.

In regard to the great New Majestic tomato being advertised by the Iowa Seed Company, the following, taken from a personal letter from J. R. Lawrence, the noted horticulturist and experimenter of Massachusetts, will be of interest to our readers. Mr. Lawrence says: "I grew 48 varieties of tomatoes on my experimental grounds last season and the New Majestic produced the largest fruit I have ever grown. The photograph which I send shows one which weighs 3 3/4 pounds. It was somewhat rough and might almost be called a double fruit, but it grew on one stem, was completely joined together and was all one specimen. The plant from which it was taken produced five pecks (1 1/4 bushels) of large,

round, smooth fruits, it being the only rough one on the plant." Heretofore 2 1/2 pounds was considered almost the extreme limit as to size of a tomato, but last season many persons reported that they grew specimens of the Majestic weighing 3 to 5 pounds each. They are so productive and of such handsome shape and fine quality that they are sure to please, and everyone who likes tomatoes should give them a trial. This new variety is being introduced by the Iowa Seed Company, of Des Moines, Iowa. They are offering \$100 in cash prizes for the largest tomatoes grown this year and we hope our readers will all compete. Better write today for a copy of their large illustrated catalogue of garden and farm seeds, which will be sent free to you if you mention this paper.

DEFINITE POULTRY RECORDS.

Keep a book, Mr. Fancier. Mr. Poultryman, Mr. Farmer. Those who have a habit of making accurate records of the laying of their hens, of their age and value, never can be persuaded to give it up. And there's a reason. Because it makes them more systematic in all their dealings with their hens. It shows them in "black and white" the cost, profit, amount of feed, cost of supplies, number of hens alive, number dead, number hatched, etc.

These records can be made best in connection with trap nests and Myer's Ideal Aluminum Leg Bands. The leg band question is an important one. The poultryman should select the one that neither irritates, poisons or binds the skin or muscles of the fowl.

Mr. Myer's band recommends itself in that it is easily adaptable to every outline of leg—rough or smooth. It is light, neat, strong, durable. It cannot come off unless intentionally removed, yet is easily and instantly adjusted. It cannot oxidize, irritate or abrade the scaly formation of the leg. The fowl feels no nervous inconvenience. This band has a double clutch which effectually prevents its loss.

Mr. F. O. Wellcome, well known in poultry circles, writes thus: "We utility men require a leg band for our birds that will stay on indefinitely and will not injure the feet or legs of the birds. If we are keeping individual records, and a number of bands lose off, there is a mixup and very likely valuable records are lost. I lost a number that way before I got your band. I lost over ninety out of one hundred of a certain well known band in two years. The Ideal Aluminum is the only band I ever used that is sure to stay on until purposely removed. We want a band that can be read quickly and accurately without a microscope and can be taken off without injury and used again. The Ideal Aluminum has answered my requirements for a thoroughly practical business leg band, both for my own use and to furnish my customers in connection with my trap nest outfits. I did not select it on account of its name, but because I had to have it."

Mr. Myers is having phenomenal success this season. These bands have been obtainable only for a comparatively short time, yet his orders this season will run up to the half million mark. Mr. Myers is located at Freeport, Ill. He sends a sample band free and a complete circular on Barred Plymouth Rocks to any one mentioning this paper and sending a 2-cent stamp for mailing.

S. C. BROWN LEGHORNS.

Edwin W. Staebler, 36 Tremont street, Cleveland, Ohio, one of AMERICAN POULTRY JOURNAL's old advertisers, is announcing this month in his ad on the inside front cover sales of his cockerels and pullets; also trios and pens at remarkably low figures when the fact is considered that he has been a winner with his birds wherever they were shown. He is also fully prepared for egg orders, and readers of AMERICAN POULTRY JOURNAL will make no mistake in sending their orders to him.

The pens and trios he is advertising are good value for any one starting with Brown Leghorns. They do not consist of old hens, either. He is satisfied to sell good stock at small profits, as he wants to make room for some breeders, his space being limited on a city lot.

A party to whom he sold a pen early in January, 1905, wrote "the chickens came through all right; they are all O. K. They laid the first day." This proves that his stock is satisfactory.

Mr. H. C. Houser, 633 W. Sixty-second street, Chicago, expert breeder of S. C. W. L. has a few farm raised cockerels and pullets for sale. Mr. Houser is now able to furnish eggs by the setting, 100 or 1,000 from choice breeding birds. Satisfaction or money back.

400 ROYAL BLUE

Barred Rock... COCKERELS

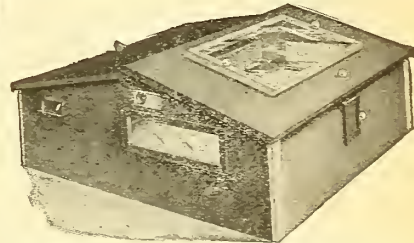

Big, strong, vigorous, well marked breeding birds that will improve your flock. The ROYAL BLUE Barred Rocks have won at America's greatest shows for 20 years, and at Boston, Jan., 1905, they outclassed all competitors.

Those who win at the big shows have the Royal Blue Strain. It has always been the best.

CORNELL INCUBATOR MANUFACTURING CO.**Capital \$250,000. Ithaca, N. Y., U. S. A.**

The Cornell Incubator Manufacturing Co. finds great satisfaction in offering to the poultry fraternity its 1905 Automatic Moisture Incubator, the culmination of a series of carefully conducted tests and experiments.

The new Cornell of one-inch solid chestnut is a machine built for business—one that will give perfect results to the market poultryman as well as to the amateur breeder. It embodies all of the progress achieved in the science of artificial incubation during the past decade, supplemented by the Cornell improvements and exclusive patented features. It is a handsome cabinet finished machine and is as good as it looks.

No expense has been spared in making it thoroughly durable and attractive, and the inside construction is such that its makers will guarantee it will hatch every egg fit to be hatched. In order to meet the great demand for the new Cornell the company has been obliged to increase its capital from \$100,000 to a quarter of a million dollars. New machinery of the most improved type has been installed and nothing has been stinted to make the new Cornell perfect, both inside and outside.

A great defect, which has hitherto appeared insurmountable, has been the very large percentage of "dead chicks in the shell" which an incubator operator found in his machine at the conclusion of each hatch instead of the much desired healthy, lusty chicks. The new Cornell patented moisture device which pours pure warm moist air through the heater into the hatching chamber successfully avoids this evil and rewards the operator with a healthy chick for every egg with a good strong germ that has been placed in the machine.

The new Cornell is provided with a removable egg chamber top, split removable bottom nursery trays, slatted bottom and patented safety banked air valve. These improvements not only permit the operator to thoroughly clean his machine after every hatch but also insure to the growing embryo the necessary ventilation to assure a successful exclusion.

The new Cornell thermostat of zinc and steel is as sensitive as a thermometer and will follow it, rapidly and accurately, up and down. One of the very important points for a successful hatch is the uniformity of temperature in the egg chamber; to this end an accurate thermostat is an essential feature, and this is thoroughly provided for in the new Cornell.

The Cornell is constructed with a two-inch dead air space packed with cotton between the egg chamber and the outer wall, and the hot air box is insulated by alternating layers of laminated cotton and cardboard. It is also provided with a patented table top, protecting the finely adjusted regulator mechanism from all outside interference, and making it possible for the operator to place his trays on the machine when cooling and turning the eggs, without any danger of disturbing the regulator arm. This is a most important, valuable feature for the large poultry farm, as it obviates the necessity of providing tables on which to cool and turn the eggs; it saves a great deal of expensive and valuable space and permits the operator to make his incubator cellar of a size to suit his machines only, at a great saving in the item of space and construction.

The piano fitting legs are also a very important feature in the Cornell construction. Each leg is provided with a 7-16 screw hanger which securely fits into a nut, set into each corner of the machine and into which the leg is screwed easily and securely without tools or trouble. Another valuable and exclusive feature is the lamp hanger of spring steel, which holds the lamp burner securely pressed up against the lamp chimney of the heater; it will bear a weight of at least twenty-five pounds exceeding that of the lamp. We really believe it is the only safe and reliable lamp hanger that has ever been placed on the market.

The Cornell heater is insulated by a 2-inch asbestos jacket and capped with a cast iron crown, making it impossible for the heater to become dented or damaged, as is invariably the case with heaters not fitted with this crown. The perfect insulation of the heater also works an important saving in the oil bill; we venture to say that the Cornell heater will save the operator at least 33 per cent of his oil.

The Cornell Incubator Manufacturing Co. invites intending purchasers to inspect their factory and thoroughly look over the machines in process of construction; it is their aim to make a reliable, honest ma-

chine that will do the work thoroughly and to the satisfaction of every user.

The Patented Peep-O-Day and New Homestead brooders are also made by the Cornell Incubator Manufacturing Co. The Peep-O-Day is so well known that it hardly seems necessary to even say a good word in its favor. At some of the government agricultural experiment stations and on many of the large poultry farms the Peep-O-Day brooder is rapidly displacing the old-time hot-air piping systems in the brooder houses; it is safe to say that the Peep-O-Day is the only dependable machine that has ever been placed on the market. It is provided with a lamp that will not smoke under any weather conditions and one that will keep the brooder at the temperature set by the operator, both indoors and outdoors.

The Cornell Incubator Manufacturing Co. desires to call your especial attention to their 1905 brooder and colony house combined on runners. It is, so to speak, a complete poultry plant in itself that will take care of the chicks from the moment they are taken from the incubator to the time they are ready to go into winter quarters.

The Cornell Incubator Manufacturing Co. have recently established a feed mill where they prepare their own chick and poultry foods and alfalfa and clover products. Their foods are made of sound, wholesome grain, with the best improved machinery and skilled labor. The Cornell chick food contains not a particle of grit, oyster shell or charcoal, and they are proud of the claim in being the first manufacturers to offer the poultry fraternity grain and grain only—at the price of grain.

The Cornell Incubator Manufacturing Co. manufacture a full line of poultry houses, coops, poultry supplies and remedies and will be pleased to send their catalogue and supplement free to all those who will inquire for it.

UNQUALIFIED SUCCESS.

The above are the terms employed in a recent announcement issued by the Ohio Incubator and Brooder Company, of Columbus, Ohio, to indicate the condition of their last season's business.

After thanking their customers for a generous acknowledgment of the merits of Ohio machines as demonstrated in actual use they bespeak a continuation of patronage and an increase of business for the coming season.

New improvements in appearance and operation have been added and the ventilating system slightly changed. A host of testimonials from pleased customers, together with a very flattering list of prizes taken at various exhibitions, are offered as reasons why the Ohio product is a safe, valuable and money-making investment for any poultry raiser.

Chapman & McQuillande, of West Hartford, Conn., made the following winnings at Herald Square, New York Show on White Rocks: Second and third cock; first and second hen; first, second, third, fourth and fifth cockerels; third, fourth and eighth pullets; second and third pen, meeting and defeating the breeders that won the first prizes at the Madison Square a month later. Their winnings of first, second, third, fourth and fifth cockerels is liable to stand good at any time at any show of importance. They also won the special for best display of Plymouth Rocks.

They were a little unfortunate in their string of Barred Rocks at this show, as the birds were delayed in transit and were not placed in the show room until about ten minutes before ribbons were put up, and consequently did not show up to the best advantage. However, on six entries they won sixth cock, fifth hen, third cockerel and second pen.

At Boston on one entry they won fifth on pen of Barred Rocks. At Hartford, Conn., in competition with a number of winners at Madison Square, they won on Barred Rocks first cock, first and fourth hen, third and fifth pullet, first pen, the championship cup offered by the American Plymouth Rock Club for best cock, hen, cockerel and pullet; also ribbon for best shaped bird in class; silver cup for best cock and two hens; special for best bird in class, and \$10 gold specials on first pen.

J. A. Leland, of Springfield, Ill., writes that he still has about fifty Rose Comb White Leghorn cockerels and pullets ranging from utility to first-class breeding birds for sale at right prices and they are bred from winners at Chicago, Peoria, Springfield and St. Louis, and offers special bargains in cockerels for the next thirty days. He also has a few useful Light Brahmas at right prices. A circular will be sent to any one who writes for it.

AXFORD INCUBATOR CO.

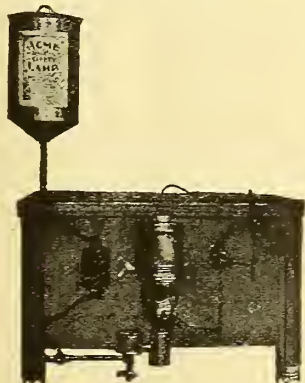

The coming to the front of this pioneer machine of the Axford Incubator Co. is an interesting event in incubator manufacturing circles and for poultrymen. The Axford incubator has been manufactured and on the market for over thirty years.

Visitors at the Chicago shows and other shows in the neighborhood of Chicago remember this machine, which has been on exhibition for a good many years, and have watched the successful hatches that had been taken off during the shows. At the last Chicago Show, January, 1905, this exhibit, with its round machine constantly in motion, showing all phases of incubation, was a great center of attraction.

Recently Mr. Shoreen has become personally and financially interested in the Axford Incubator Co. He spent his first years on the farm and for a number of years was interested in the wholesale and retail grocery business of Chicago, and has at all times been found energetic and pushing ahead and sure to come to the top, no matter what he undertook. Mr. Shoreen is also a mechanic and a poultryman, and in becoming interested with the Axford Incubator Co. has laid aside all other dealings.

THE SECRET OF THE WONDERFUL SUCCESS OF THE ACME COMPOUND REGULATOR AND ACME AUTOMATIC SAFETY LAMP.

It is quite natural that the man who devotes his every talent, every energy, every moment of his time to one thing, sticking to it tenaciously, will invariably make it a great success. The time was when a man could be jack-of-all-trades, but

times have changed. This is an age of specialists and specialties. The old family physician used to treat the dozen and one diseases. Today we have the specialist for each disease—the eye specialist, the throat specialist, the stomach specialist, and so on.

What has brought about this great

and from now on will help to push to the front one of the oldest incubators in existence. He has attended a number of poultry shows during the last few months and everywhere has met with very promising results, owing to the standard of the Axford machine.

We give above an excellent illustration of the Axford manufactory at Forty-fifth street and Cottage Grove avenue, Chicago, as well as good portraits of Mr. Axford and Mr. Shoreen. This is an enterprise that is founded on merit, one that has been quietly going on for years in a more or less extended capacity, but now comes before the public with a strong invitation for patronage.

A new catalogue has just been issued, beautifully printed and finely illustrated in colors and containing many testimonials from satisfied customers. One of the most interesting illustrations in the catalogue is a reproduction of the diploma given in 1875 by the Nebraska State Board of Agriculture at Omaha, Neb., for the best steam chicken hatcher. This is an indication of age and reliability of this machine. A copy of the new catalogue will be sent to any one writing them and mentioning AMERICAN POULTRY JOURNAL.

change? A demand for better service, for higher efficiency. No man can master all things, but most men can master one thing, if they will apply themselves persistently and wisely.

As in the physician's profession, so it is in the incubator manufacturing business. The man who makes a specialty of making some special parts of the machine, the regulator and lamp, for instance, will naturally become more proficient in the manufacture of those parts than the man who undertakes the making of the whole machine. He concentrates his ability on one thing, his one purpose is toward one end—the highest efficiency, and his perseverance and continued effort are certain to bring his reward.

CUT. It is the result of this special devotion to one thing by Mr. H. M. Sheer, of the H. M. Sheer Company, of Quincy, Ill., that has produced the wonderful degree of efficiency of the Acme Regulator and Acme Lamp for incubators, and it is the real secret of their thorough practical success. In view of this fact it is not so surprising that they are so far in advance of any other incubator regulator and lamp. They are the product of the only regulator and lamp specialist. They represent over fifteen years' continuous application, experimenting, developing to practical perfectness. They were good inventions when first brought out, ahead of anything then; they are fifteen years better today and far ahead of anything now.

C. C. Randleman, of Ramseur, N. C., won at the Charlotte Poultry Show, January 17 to 20, 1905, as follows: Barred Plymouth Rocks, 205 in a class—First cock, first hen, first pullet, third cockerel and the silver loving cup for the best cock, hen, cockerel and pullet in the show; competing against the Biltmore Farms and the best breeders in the South.

Proper Care and Feeding of Poultry.

The above is the title of an entirely new book, just from the press, which covers the entire subject of raising all classes of poultry. A compact little manual of 32 pages, written by an expert poultry raiser, treating of the starting of the young of all fowl, their wants, habits, common diseases, treatment, feeding of all ages and all classes of fowls, etc. No other work ever written gives so much and such reliable information in so small a space. As a special offer and for a limited time, this invaluable little work will be sent, together with one year's subscription to a 50 cent first-class poultry paper, for twenty-five cents. You may not see this offer again. Take advantage of it now. Address, J. S. Gilcrest, Dept. 1, Des Moines, Iowa.

Bigler's Poultry Compound

a guaranteed cure for Cholera and Roup, and the greatest egg producer on earth.

BIGLER'S LICE KILLER

the greatest insect destroyer known. Price 50 cents a package postpaid, and your money back if they fail to give satisfaction. We want a reliable man with horse and rig in each locality to act as agent either on salary or commission. Send for terms and contract. Eggs for hatching from high scoring Barred Rocks \$1.50 per 15. As good as others ask \$3 for. Stock at reasonable prices. Illustrated circular free.

G. R. BIGLER CO.,

X 920, Springfield, Ill.

\$3 a Day Sure

Send us your address and we will show you how to make \$3 a day absolutely sure; we furnish the work and teach you free, you work in the locality where you live. Send us your address and we will explain the business fully, remember we guarantee a clear profit of \$3 for every day's work absolutely sure. Write at once. ROYAL MANUFACTURING CO., Box 758, Detroit, Mich.

A SENSATIONAL SHOW RECORD.

One of the most sensational events in the show room this season was the wonderful winning made by Ross C. H. Hallock, St. Louis, Mo., on his White Wyandottes at the great show at Madison Square Garden, New York—first cockerel, first pullet, first hen, first pen and first collection on entries—a feat never before accomplished at this show. What makes this winning so extraordinary is the competition he was "up against." There was a total of 483 White Wyandottes on exhibition, twice as many as any other variety—250 more than at the same show last year. It was without doubt the best class for quality ever gotten together. In breeding pens there were 36 fine birds to each pen, shown by 35 different exhibitors. The pullets in Mr. Hallock's first prize pen—the only pen he entered—matched so evenly that many who saw them remarked that they resembled peas in a pod. He sold the cockerel heading this pen for \$200 and one of the pullets for \$100, making a record price on a pair of White Wyandottes. In hens Mr. Hallock only entered one, on which he won first. In cockerels and pullets he entered two each. Mr. Hallock also showed one cock bird the sire of his winning cockerels and pullets. This bird should have been placed, nevertheless. Mr. Hallock will breed from him this season; as he knows what he will do, and anyone wise enough in buying eggs from Mr. Hallock will no doubt be able to make the same winnings. Mr. Hallock's birds are all that nice blocky, stay-white kind that all White Wyandotte breeders are looking for. Flakes and brassy plumage are unknown quantities with Mr. Hallock. His male birds are good size, pure white plumage, nice, curved, broad backs, full breasted and bright yellow shanks. His females are broad in back, good combs, good cushion and short tails well spread. In fact, the eleven birds shown by Mr. Hallock conform as nearly as possible to standard, and he tells me he has many more good ones for sale. His breeding pens are now all mated up with his prize winners, including several brothers and sisters of first cockerel, first pullet and first hen.

Mr. Hallock did not show at the great Chicago show of 1905 owing to the fact of being a judge of the White Wyandotte class. Judging from the way he placed the ribbons he certainly knows his business. He gave perfect satisfaction to all exhibitors—something rare. We absolutely did not hear a complaint from anyone. His winnings at former Chicago shows are well known, therefore do not need mention.

Mr. Hallock is secretary of the White Wyandotte Club, an energetic gentleman who conducts his business on business principles. Readers of this journal who are in the market for either stock or eggs will do well to correspond with him.

J. BRINKAMA.

To the Members of the American Red Club:

The first regular annual meeting of the American Red Club will be held in October next at Hagerstown, where the A. P. A. will hold an adjourned meeting and where there will probably be a notable gathering of poultrymen.

F. D. BAERMAN, Sec.

Dunellen, N. J.

THE CARE OF THE FOWL.

The old adage, "Cleanliness is the next thing to Godliness," could not come home more forcibly in any other line of business than in the poultry business. Without cleanliness the poultryman might just as well get out of the business, for it will prove a big losing venture to him. So many people who start in the poultry business think if they only get good stock all they will have to do is to fold their hands and sail to riches on flowery beds of ease. But one who wishes to succeed in the poultry business must always be on the jump from morning till night. After the day's work is done it is a good plan to make note of the things to be done the following day so that it may not be forgotten, but done.

When I started in the business I put up good houses, weather boarded and plastered them, thus making a very warm house.

Following I will give a brief description of how I feed and tend to my fowls. First of all, let me say that I have regular hours for feeding and when their feeding hour arrives it is amusing how they will watch for the coming of their feed.

I have a dropping board under each roost, thus keeping all droppings from the litter. Three times a week I clean the board off thoroughly and spray with some good liquid lice paint. The floor is covered with about two inches of sawdust, then over this is scattered six or eight inches of straw or chaff. This also is cleaned out weekly and a fresh supply furnished. One morning I feed stale bread, soaked in warm water, adding some good poultry food. Next morning it will be a wheat bran mash with the poultry food. Next morning I give rolled oats or boiled barley with the poultry food and so on successively throughout the week. At noon wheat and oats equal parts is thrown in the litter which affords good exercise for the fowls. Then at two o'clock I feed cabbage or scalded clover, sometimes boiled potatoes. In the evening I feed whole corn, wheat and oats equal parts. After the fowls have gone to roost I scatter some wheat and oats in the litter so they will have some exercise in the early morning to warm them up. I always have an abundance of grit and oyster shells placed where they can easily reach at all times. I never let their drinking water get cold, but furnish them with nice warm water as high as twelve times a day in cold weather. I add a few drops of aconite two or three times a week. My fowls are the S. C. Brown Leghorns. My pullets began laying Oct. 15th and have been working all this winter. I attribute this solely to my care of them.

DR. O. G. CRAWSHAW.

Dawson, Pa.

FRESH AIR.

Plenty of fresh air for the chickens. It is a great mistake to build the poultry house too tight; there must be some ventilation, and the best place to make your ventilation is in the highest point, south side preferred. If the walls of your house are damp and frosty in zero weather, the ventilation is wrong, and poultry cannot thrive under such conditions.

W. H. MILLARD.

Geneva, Ill.

Questions and Answers

Questions asked by subscribers will be answered in this department.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Please answer in your next issue of the AMERICAN POULTRY JOURNAL: 1. How much by weight should I feed to 16 fowls of this ration composed of 5 lbs. bran, 5 lbs. middlings, 5 lbs. oatmeal and 5 lbs. linseed meal with green cut bone and alfalfa meal for a mash in the morning, and how much by measure should I feed the following grains, oats and barley at noon and corn, oats and barley at night?

2. How much floor and yard space in square feet should I give to 16 fowls taking into consideration that I am living in town where I am crowded for space and cannot give them free range?

Stanwood, Iowa. S. S. S.

1st. The average fowl will thrive on about 4 ounces of soft feed. You have too much linseed meal in proportion to the other feeds. About one-half pint to a fowl is considered the right amount of grain.

2d. Each fowl should have 10 square feet of floor space; therefore you should have 160 square feet for your 16 fowls. Where careful attention is given the fowls, less space may be used. The yard space should be at least double that of the floor space.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Will you please answer this question through your questions column. When our little chicks are hatched off there is something like a common flea only smaller (black), some call them stick-tights. They get all around the eyes, comb and then get under the wings, but generally kill chicks before they get there. While you are handling them if they get on you they stick on your flesh and are hard to get loose and when loose they hop like a flea. Please tell what they are and a remedy for destroying same.

Loganville, Ga. W. A. B.

We believe this is what is known as the chigger-flea. Lard and a little kerosene oil has proved very effective in removing this pest.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Can you advise me of any particular points in the treatment of eggs in crates placed in cold storage, for several months? That is, to have the eggs come out in first class shape. You might also state the uniform temperature of the room to produce that result.

Port Jervis, N. Y. Mrs. A. N. S.

Eggs must be perfectly fresh when placed in cold storage, and if the temperature is kept even they will come out in good shape. The temperature should be about 40 degrees.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Please answer the following question in your valuable paper: I have some S. C. R. I. Red pullets which

when dressed for market do not have a bit of meat on the breast.

They mope around and hang their wings down and seem to be weak, even sometimes the wind will blow them over. I have a good mixture of grain including wheat, oats, corn, barley, bran, animal meal, green bone and oyster shells. Woodfords, Me. G. B. G.

The indications are that your fowls have a large crop of lice on them. Try some good lice remedy and watch the effect.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Will you please answer the following questions in your question and answer department:

No. 1. Is the following remedy a good roup cure? Equal parts sweet oil, turpentine, gum of camphor and kerosene, injected into nostrils and throat?

No. 2. If you know of a better remedy please give it to me.

No. 3. Is quinine a good remedy to use; if so how much?

No. 4. Should I use anything in drinking water? What is the best remedy?

No. 5. What is the best remedy for canker?

No. 6. If hens freeze their combs will it stop them laying till their combs get well?

No. 7. When shipping fowls 600 or 700 miles is it necessary to put feed and water in the coop? It looks like when the express companies handle them they would upset water in cup. Do they water and feed the fowls for you?

No. 8. How do express companies charge for shipping fowls, by the pound or by the hundred pounds? Do they charge by the mile or by 500 miles? If they charge by the 500 miles, would they charge twice as much for 600 miles?

No. 9. Is there a poultry journal called (The Industrious Hen)? Can you give me the correct address, as I would like to get a copy of it.

Cincinnati, Ohio. A. G. S.

No. 1. Yes. Read article on roup in this issue for answer to questions 2, 3, 4 and 5.

No. 6. No.

No. 7. A drinking vessel should be fastened in the coop, and a small sack of feed tied on the outside. If this is done the express company will feed and water the birds.

No. 8. Charge is made by the hundred pounds.

No. 9. Yes. Do not know the address.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Please answer through the columns of your paper the following question: What is the matter with my chickens? They have a swelling at the knee or ankle and there is a gathering and when I pick it, it stays down for a day or so. It is a sticky, watery substance that comes out. Chickens eat

Sharple's Tubular Separators

Only Bowl With Proper Bearing

All "bucket bowl" separators have incorrect bearings. The bowl is set upon the spindle and held upright by rigid bearings. Such bowls are top heavy, inclined to wobble, sure to bind.

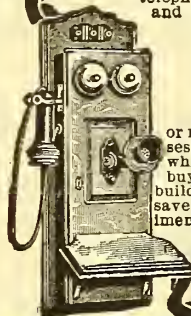

Tubular bowls, only, are properly supported, being suspended from and turning upon a single ball bearing. A breath almost turns them. They cannot wobble or bind. Catalog L-205 tells all about them.

and drink well and combs are red, but they don't lay. Please let me know what to do for them. P. L. M.

Schenectady, N. Y.

Your fowls are suffering from rheumatism in an advanced stage. As rheumatism is usually caused by exposure to cold and dampness you should at once remove the cause. Affected birds should have frequent change of ration with plenty of green feed. Begin treatment with a dose of Epsom salts, 20 to 30 grains. The following day add 20 to 30 grains of bicarbonate of soda (baking soda) to the drinking water and give 2 or 3 grains of salicylic acid twice a day. Apply camphorated or carbolic ointment to the affected joints. The birds that are seriously affected would be better killed than treated, and the main reliance must be under any circumstances in prevention by securing proper sanitary conditions.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Will you kindly answer the following question in your "Question and Answer" department? I want to cross my Brown Leghorn cockerel with a W. P. Rock hen. Would you let the cockerel run with the W. P. Rock and Brown Leghorn hens at the same time? When will the New Standard be ready? N. Vassalboro, Me. J. E. J.

We never like to see two good breeds of fowls spoiled in this manner, and cannot see the object in it. But if you so desire, all that is necessary is to put your White Rock hen in the pen with your Leghorns. New Standard will be out this month.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Will you please tell me in your Question and Answer columns how to ship chicks that are just hatched? Would a common box be all right? Also,

I have a Brown Leghorn cockerel that shakes his head and while so doing he walks backwards. He eats good and seems to be all right otherwise.

Belchertown, Mass.

A common box is all right, but sides should be lined with flannel, and a number of holes made in cover for ventilation. Cockerel probably has something lodged in his throat, or has a slight cold which is affecting the air passages.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Please answer these questions in the columns of your valuable paper: Last summer I packed down 50 doz. eggs in waterglass (1 gal. waterglass to 10 gal. water). I used an old beerbarrel to pack them in which I clinched good. A while after I had packed them down the waterglass turned to a yellow color and it was thick like paint. Is that the way it always turns out? Now I took them off after they had been in for 8 months and found every one fresh, but when I boiled the shells broke in the water. Do you think I have done it right or not?

For packing down eggs in waterglass you recommend earthenware jars to be best. Would not a new barrel or even a salt pork barrel well cleaned be just as good? Why not?

Clark Station.

As your eggs came out fresh you should be the judge whether you done the work right or not. We believe pork barrels would be all right for this purpose.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Please state in your "Question and Answer" department, if it is possible to cure a bad case of canker in poultry, if so what is the remedy? I have a B. P. R. rooster that is troubled as follows: He had a lump

about as large as a pigeon's egg in the throat, which when I first observed him, was covered with a thick coating of the cheese matter almost choking him. He must have been in this condition for some time as he was very poor. I took him from the other chickens and have been treating him as follows: Each morning for the last three weeks have removed the cheese matter and applied powdered borax and burnt alum, equal parts. The lump in the throat is eating away, but the cheesy matter continues to form and the last few days there has been a swelling in the corner of the mouth with a little sore. Since I began to doctor him he has got up to a good condition and has a fine general appearance, plumage and comb.

Montpelier, Idaho.

J. S. R.

Your method of treatment is very good; but you might have better results by using a ten per cent solution of borate of soda or boric acid, 15 grains to the ounce of water. These solutions should be applied quite frequently.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—I have struck a snag. Had hen that had swell head on one side, eye closed, found canker in throat; difficult breathing. Took her by feet, let head drop down and blood flowed out to the amount of tablespoonful, so I cracked her neck. I would like to have you give name of diseases and how to treat same.

C. B. W.

Brownsburg, Ind.

See article on roup in this issue.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Will you please answer the following question in your journal:

I have a hen house 12x12 in which I have 20 chickens. It is four double, the outside wall is drop sheeting, the next tar paper, the next plain boards,

YOUR HENS WILL PAY

Bigger poultry profits if they are properly housed. Don't think it necessary to invest a fortune in a poultry house. Use for the roof and sides the genuine

PAROID ROOFING

It will last longer and wear better than any other ready roofing, because it is better made clear through—better stock, better saturation, better finish. That's why it's used by the U. S. Government and by leading railway systems and manufacturers. It's weather-proof, wear-proof. Anyone can lay it in any kind of weather and it "stays put." It contains no tar—slate color. If you are looking for Quality and Durability you'll be sure to insist on Paroid—the roof that lasts—and not take a cheap imitation. A complete roofing kit in every roll.

Send To-day For Free Sample

and book on "Building Economy." It tells how to construct buildings at low cost. It will save you money. *Established in 1817.*

F. W. BIRD & SON,

East Walpole, Mass.

Monadnock Bldg., Chicago.

and the next tar paper, but I have no air space in between and there is always a heavy frost sets on the inside at night and in the day time it melts and thus my house is always very wet inside but it is not cold. I do not have a ventilating shaft in it. I wish you would please inform me what to do to keep it dry. Hoping you will oblige me.
J. T.

Neeah, Wis.

You must arrange to give your house better ventilation. Keep one or more of the windows open during the day, and unless the weather is very severe leave one open during the night. Have your roosts so arranged that no direct draught will strike the fowls from the open window. This can easily be arranged by hanging a burlap curtain in front of roosts.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Please answer through Question and Answer department the following:

1. How old must a pullet and cock-
ere be till they are no more pullet and
cockere?

2. Is fine raw rice good for little
chickens? If so, how should you feed
it?
S. G.

Glen Rock, Pa.

1st. One year old. 2d. Yes. Cooked
rice is better.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Will you please tell me
whether the Bronze or the White Tur-
keys would do best in our part of the
country?

Some one told me that the White
could not stand the cold so well as the
Bronze. Is this so?
G. B.

La Fargeville, N. Y.

We believe that the one variety will
stand the cold as well as the other.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Please advise in your Feb-
ruary issue, if possible, the best reme-
dy known to you for frosted combs,
mode of treatment, etc., and oblige,
Birmingham, Ala.
S. H. B.

Liberal application of carbolated
vaseline will generally do the work.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Please answer in your
question and answer department, is
lime or old plaster hard enough to make
good grit?
J. J.

Colden, N. Y.

No. Broken crockery or sharp gravel
is better.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—When you can't get green
bone, what is a substitute? Will bone-
meal do?
F. L. M.

Pendleton, Ore.

Bone meal is very good; but blood
meal or dried beef scraps are better.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—Occasionally this winter a
few of my hens have run at the nostrils,
and their breath has been quite offen-
sive. Is this offensive odor an accom-
paniment of colds, or is it always in-
dicative of a rousy condition?

Vassar, Mich.

J. P.

See article on roup in this tissue.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir:—I often see in the JOURNAL
something about balanced rations, but I

METAL MOTHERS

that hatch and brood chicks in a new way—nearer to
Nature's way—an entirely new and novel method. The
simplest yet most effective machines ever devised for the
artificial hatching and rearing of all kinds of poultry. The

Cycle Hatchers and Cycle Brooders

are made of metal and asbestos throughout; will not warp,
shrink or crack. The Cycle Hatcher has no egg tray doors to
open—eggs are cooled without removing from the machine.
Will hatch hen, duck, goose or turkey eggs equally well and at the same time. Regulation
is entirely automatic and scientifically exact—we obtain results impossible to get in wooden
machines. Write for free catalogue and learn all about these Metal Mothers
"the Wonder of the 20th Century." A 50-egg hatching machine complete for only \$5.00.

IT IS TRUE ECONOMY

TO FENCE YOUR POULTRY YARD WITH

Page Poultry Fence

BECAUSE it is made of larger wire—the smallest being No. 14; Stronger wire—all the horizontals being double strength Page-Wire; Coil Spring Wire—making a flexible fence that gives and takes, STANDS UP straight under all climatic conditions, and can be smoothly erected on hilly surfaces.

BECAUSE it is so woven that the fabric cannot come to pieces; is high, strong and close enough to fence poultry in and stock out; every wire is heavily, smoothly and evenly galvanized, and it will stand for years without repairs—until the posts rot off.

BECAUSE it can be perfectly erected on few posts—one every 50 feet being sufficient; requires no top or bottom boards, and, of course, no nails, and but few staples.

CREDIT It's first cost with the saving in posts, boards, nails, staples and labor of erecting, and bear in mind it's greater utility and lasting qualities, and, we believe you will agree with us that Page Poultry Fence is true economy—the best investment.

Send a postal request for catalog and descriptions.

PAGE WOVEN WIRE FENCE CO.

Box 5839,

ADRIAN, MICH.

would like to have it made more plain, for when you talk to common people about balanced rations they don't understand it. What kind of grains should make up a balanced ration for fowls? How much of each kind? What mixture of bran or shorts or other meals would make up a balanced ration, and how much of each kind? J. J. R.

Shelburn, Ont., Canada.

A good balanced whole grain ration can be made in the following manner: 2 bushels of wheat, 1 bushel of oats, 1 bushel of corn, ½ bushel of barley, 1 peck of sunflower seeds, 1 peck of buckwheat. A little Kaffir corn and millet seed may be added if convenient to do so. For a mash feed, the different meals may be mixed in about the proportion.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—Will you kindly answer the following questions in your next issue?

No. 1—What is the best feed for young chicks just out of the incubator?

No. 2—Is three weeks long enough to leave chicks in the brooder?

No. 3—What age does a pullet start to lay?

No. 4—Do you consider it profitable to cram chickens?

No. 5—At what age is it safe to caponize a cockerel?

No. 6—What will be the necessary space for a run-way for winter quarters for 100 young chickens? N. E. A.

Muskegon, Mich.

1st. Any of the chick feeds advertised in these columns will do the work. 2d. No. This time of year they should be left in the brooder from eight to ten weeks. 3d. From six to nine months. 4th. Yes, if done on a large scale. 5th. From four to six months. 6th. 25x100 feet.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—Will you please answer the following in Q. and A. columns:

1. I have several pullets whose feathers have all come off of head leaving same bare. These pullets have been laying well for about a month but have stopped. What is the cause, and a remedy?

2. Do dark bay eyes in Golden Sebright Bantams denote impurity? The "Standard" calls for light bay, but we have some from several different breeders and all have dark bay eyes.

3. Will a temperature of 110° for several hours injure eggs at any time during incubation? E. G. C.

Parthenia, Pa.

1. Your pullets are troubled with what is called the depluming mite. Anoint the parts with lard and flower of sulphur, two tablespoonfuls of the former to a teaspoonful of the latter. Carbollated vaseline is also good.

2. No; but the eye should be a bright bay.

3. Yes.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—Can you please advise me through your journal causes for first hatched chickens dying when a few days old. They seem very healthy chicks when hatched but in a few days commence to drop their wings and topple over. They seem to have a pasty substance at the rectum. I feed bread crumbs and grit such as sand and water the first week. Can it be caused by the water? We have well water.

G. H. P.

Cleveland, Ohio.

Bowel trouble is the cause of your

chicks dying. This is brought about in several ways. Very often it is caused by the brooder being too hot or too cold. When too cold the chicks bunch up in one corner and those in the center get too warm and sweat and when they come out in the colder atmosphere they immediately get chilled and the result is bowel trouble. Improper feed will have the same effect, and lice will bring on bowel trouble.

Your brooder should be at a temperature of 95 degrees when you put your chicks in and for the first 48 hours they should be fed nothing but a little chick grit and given water to drink, from which the chill has been taken. After that they may be fed steel cut oats, rolled oats, cracked wheat, or any of the various chick feeds advertised in these columns.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—As I am a beginner in the poultry business I would like to ask if hens that are let run loose over the farm need to be fed bone and seed meal as you do for winter success? Our hens need no protection here at night and the days are always sunny and bright. There are some insects for them all the time and plenty of green stuffs with a little grain morning and evening, with plenty of water. What more is necessary? Mrs. M. J. W.

Herradura, Cuba.

Where fowls have the natural conditions as above specified there is no need of resorting to artificial means as we have to up here in the north.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—Will you kindly answer the following questions in your columns of "Questions and Answers." Last spring I bought a setting of eggs from a breeder in Iowa, and from the setting I have raised some very fine cockerels and pullets. Would it be safe for me to mate those cockerels and pullets? Is granulated or commercial bone and dried beef scraps as good to feed poultry as green cut bone and fresh beef? T. J. H.

Belleville, Ill.

It will be all right for you to mate these cockerels and pullets. Where green bone and fresh beef can be obtained it is the best; but care must be taken in the feeding; two ounces to each fowl three times a week is plenty.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir: Please tell me what is the matter with a nice pullet I have. I first noticed blood on her feathers and found a large sore on her wing—thought the cat had hurt her—but on examination found large and small sores all over her head and body. They formed right where the feathers grow out and keep getting larger until they look like a large boil and then they bleed profusely. I cut away some feathers around the neck and they bleed also. Would like to know if there is a cure for it.

Mrs. C. T. E.

Mt. Sterling, Ky.

This is caused by impurities in the blood. Treatment of diseases of this character requires too much time and is very seldom successful. The bird should be killed and burned.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—Please answer in the POULTRY JOURNAL these questions concerning breeding of fowls: Does the service of the cock affect any egg except the one

laid on the day of the service? There is a tradition with the people that a hen has a certain number of eggs in her ovisac, to lay before setting which they call her "latter." Might not the single service of the cock affect all eggs in the ovisac to a certain stage of development? Now for the practical application: If a pure bred hen were mated with a common cock and some days after the same hen were mated with a cock of her kind, would not the eggs of the last mating be affected by the service of the common cock? S. J. M.

Winston-Salem, N. C.

A single service of a cock has been known to fertilize as many as 15 to 18 eggs. The influence of a cock has been known to affect the offspring as long as six months after the removal of the cock. After mating it has been proven that the fourth egg laid was fertile; in other cases none would prove fertile before the eighth or ninth. Therefore, it is rather difficult to determine just when the egg is fertilized.

Editor AMERICAN POULTRY JOURNAL:

Dear Sir—I have a hen, a R. C. B. Leghorn, that constantly pulls feathers from my other hens and then eats the feathers. Will you please give me cause and some cure for same?

Also tell me in building a poultry house which wind must be guarded against—the north, east, south or west?

H. B.

New Orleans, La.

This is generally caused by close confinement and lack of exercise. There is no cure for it. Use the hatchet on this pullet. Up here in the North we guard against the north and west winds.

FIRST TIME IN CHICAGO.

Theodore Ambrosius, Collinsville, Ill., has shown for the first time at the Chicago National Fanciers' and Breeders' Association show, 1905, with White Wyandottes and Mammoth Pekin ducks. His winnings were: White Wyandotte cockerel, first and third; pullet, first and fourth; cock, second and fifth; hen first and fifth; silver cup for whitest bird in show and three specials for best shape. Mammoth Pekin ducks, old drake, first and second; old duck, first and second; young drake, first and second; young duck, first and second. Mr. Ambrosius is a gentleman with a national reputation, noted for his square dealings. He has won at several other large shows, including the World's Fair, St. Louis, where he won, one first, one second, three thirds, one fourth, one fifth, three sixths, one seventh; also St. Louis, Kansas City, and Illinois State Fair. Any one in the market for first-class stock and eggs should write Mr. Ambrosius, Collinsville, Ill.

FROM FACTORY TO USER.

How The Columbus Carriage Company Deal Direct at a Saving of Cost to The Consumer.

The Columbus Carriage and Harness Company, Columbus, Ohio, formerly sold exclusively to dealers. Some years ago, as a sort of experiment, they advertised to sell direct to the user at dealers' prices. So well was the idea received by people in all parts of the country that now and for several years past they have sold only by mail direct to the customer. This is the only house in the State of Ohio selling direct to the consumer who manufactures the vehicles and harness they offer for sale.

The plan has many advantages, among them being the fact that the company guarantee is direct and means much to the man who is willing to pay cash for a good carriage, buggy or harness. As the saving is from \$10 to \$40 on an order, and as the quality of the work and materials used are of the best, it is more than worth while to secure their elegant catalogue, which may be had free upon application. It contains illustrations and exact reproductions of all carriages, buggies, harness and horse goods sold by them, as well as testimonials from customers all over the country.

Black Langshans

First prize at World's Fair, Kansas City, Dallas and Houston. Won the \$50 cup at Shreveport over all breeds; pen scored 191. Record for 1904 birds score 95 to 95½. Eggs \$3 for 15. Birds for sale, satisfaction guaranteed.

J. E. R. CHILTON, Dallas, Texas

A MUSICAL NOTE.

Twenty years of successful business with a record of continuous growth and expansion certainly signifies something. It means that merit and fair dealing must have been back of every transaction. Twenty years ago there was established in Cleveland, Ohio, a music house by a practical music man with a fixed determination to build success strictly on *quality*. To sell only the highest class of goods at as low a price as such goods could possibly be sold for direct to the customer, with only one small profit from maker to user.

Being a practical man, he knew that musical instruments cannot be judged from the outside. Their merit is on the inside and unless made with care will be without quality, while they may look all right. His

POULTRY SUPPLIES

of every description. Prairie State, Empire State and Star Incubators and Brooders. Drinking Fountains, Wire Netting, Spray Pumps, White Washing Machines, Powder and Liquid Lice Killers, Roup and Cholera Cures, Coudition Powders, Egg Foods, Oyster Shells, Beef Scraps, Dog Cakes and Medicines, and everything necessary for breeding poultry and pet stock. Our immense illustrated catalogue gives complete list. It is free; send for one.

Excelsior Wire & Poultry Supply Co., Dept. D, W. V. Russ, Prop., 26 & 28 Vesey St., N. Y. City

Judge S. T. Lea says that "Alice White" is the most beautiful and neater per feather than any bird he ever handled in 20 years judging poultry.

MANN'S Latest Model BONE CUTTER has been awarded

Two Highest Awards

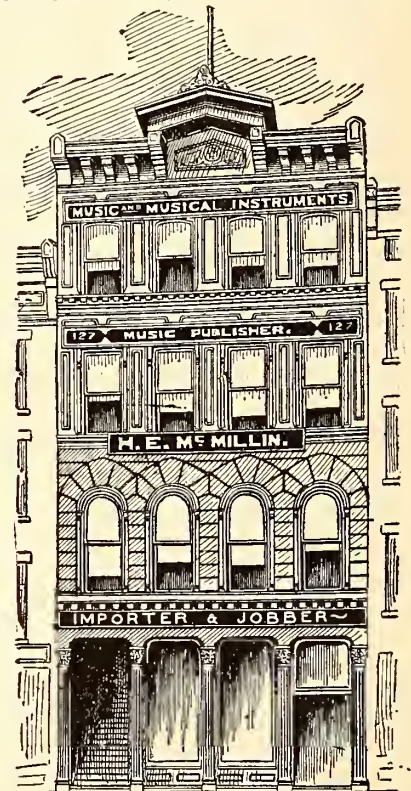

At the St. Louis World's Fair

because it has more labor-saving devices of late design than all other types put together. It always turns easy. We send it on

TEN DAYS' FREE TRIAL.

No money asked for until you prove on your own premises our guarantee that Mann's latest will cut all kinds of bone with adhering meat and gristle, easier, faster, in better shape and with less fuss and bother than any other bone cutter. If you don't like it return it at our expense. Isn't this better for you than to pay cash for a machine you never tried? Isn't that fairer than so-called "trial offers" demanding full payment in advance? Free catalogue explains all.

F. W. MANN CO., Box 56, Milford, Mass.

success and the fact that he daily receives cash orders from all over the world proves that his instruments are made with the case that is required to give them true musical quality, as well as handsome appearance.

H. E. McMillin, Cleveland, Ohio, manufactures, imports and retails "Everything Musical." Therefore his customers get the goods direct from headquarters, with the guarantee that they will be just as satisfactory as if the customer came direct to the store and made his purchase in person. Mr. McMillin looks back over his twenty prosperous years with pardonable pride and forward to the future for a continuation of his business. His numerous customers always have a good word for his house. Mr. McMillin makes it a point to have every customer a pleased, satisfied customer. Write to him for catalogues of anything you may need in the music line, and you will readily understand why his business has grown to such proportions.

An endorsement like the following cannot be bought for money, and it goes to show that Chamberlain's Perfect Chick Feed has merit:

UNITED STATES EXPERIMENT STATION, STATE AGRICULTURAL COLLEGE, BROOKINGS, S. D., Feb. 4, 1902.

Mr. W. F. Chamberlain, Kirkwood, Mo.
Dear Sir: Enclosed please find check for five (5) sacks of your "Perfect Chick Feed." In your last letter you asked that you might be allowed to use some commendatory words of mine. I am certainly willing you should use anything I have written in any way you see fit. I am glad to recommend your "Perfect Chick Feed," both orally and written, as it comes the nearest to raising 100 per cent of all chicks hatched of any food I have ever tried. Sincerely,

D. A. SAUNDERS,
Botanist and Entomologist.

Barred Ply. Rocks Exclusively

My breeding yards are represented by birds of royal breeding and grand individuality. **Cockerel matings:** Yard 1 headed by ekl, whose sire was a first place winner at Chicago, '08. This pen is pure Bradley Bros. strain. Yard No. 2, headed by two-year-old cock, full brother to first pen cockerel at Madison Square Garden, N. Y., 1904; pen is Bradley Bros. strain. Yard No. 3 headed by the best son of cock in yard 2.

Pullet matings: Yard No. 4 headed by the best son of the great pullet breeding cock Milo. This pen is pure E. L. Miles strain. Don't Let Your Chicks Die!

You can double your poultry profits by raising all the chicks you hatch instead of murdering 75% of them in a death-trap brooder. This means dollars to you. Investigate the newest, most original, scientifically correct brooder ever built—

THE HUMPHREY PURE AIR BROODER

Top heat; perfect regulation of temperature; double circulation of heat and pure air; perfect ventilation; no tramping; easily kept clean; perfectly sanitary; most convenient; most economical in oil, and guaranteed to **raise more chicks** than any other brooder ever made. We especially urge all poultrymen who have suffered loss and disappointment from poor brooders to investigate. Already used by hundreds of leading poultrymen. Don't waste your time and kill your chicks with old-fashioned brooders—get the latest and best. You owe it to your own best interest to investigate.

World's Fair Winners—Raised in the Humphrey.

HUMPHREY & SONS, Joliet, Ill., North Adams, Mich., Dec. 5, 1904. Gentlemen:—We are glad to inform you that all the young Orpington stock we exhibited at the World's Fair were raised in the Humphrey Pure Air Brooder. We were very successful at this show where we won first, third and fifth cock, second and sixth cockerel, second, third and fifth hen, first, fourth and sixth pullet and first and third pen in the Single Comb variety, and first cock, first cockerel, second hen, third pullet and first pen in the Rose Combs. We competed against 8 of the foremost breeders, including Wm. Cook & Sons of Eng. We raised about six hundred last season and the most of them in your brooders. We liked them so well that we bought six more of you this year. They are as easy to run as an incubator. You can set them at any degree of heat, 70, 75, 80 or 90, and they will run right there like a clock and without much more trouble.

Truly yours, **KNOWLES, YOUNG & CO.**

Send for new book, "Poultry Helps," 48 pages. Printed in colors. It points the way to poultry success. It's free, but it means higher profits for you. Address

HUMPHREY, WHITE STREET FACTORY, JOLIET, ILLINOIS.

HUMPHREY'S PURE AIR BROODERS.

A pleased customer, Mrs. T. J. Joseph, of Hopkinton, Iowa, of the Humphrey Pure Air Brooder, manufactured by Humphrey & Sons, Joliet, Ill., when ordering eight of their brooders wrote: "With the lamp in the center it makes no difference which way the wind blows, but it makes a vast difference when the lamp is at one end. The two rooms is another point of excellence in the brooders. If the hover room accidentally becomes too warm, the chickens can escape in the other room and thus avoid overheating. We all had fine success raising our chickens in your brooders and I could not ask for better success than I had, for I think I lost only two out of a hundred chickens which I put in your brooder and one of those two was not perfectly developed."

Humphrey & Sons have put much thought and experimenting upon their pure air brooders. They claim that it is the one brooder that seems to be constructed on common sense. The great trouble heretofore in the chicken business has been how to raise the chicks after they were hatched. The Humphrey brooder really raises chicks, meeting every condition of successful poultry raising. It is well built with a perfect heat radiation and with an original system of ventilation, provisions for cleanliness and sanitary conditions. It would certainly be wise to investigate the Humphrey pure air brooder. The manufacturers promise that it will do better work for you, save your chicks, make less trouble, yield greater profits than any other brooder in the world.

Write the Humphrey people for their catalogue, which explains it fully.

SCIENCE VS. NATURE.

Among the many enterprises connected with the large and ever-increasing poultry industry of the country perhaps none is of greater importance than the manufacture of hatching machines or incubators, as they are commonly called.

The brains and inventive genius expended in perfecting the practical utility of these machines is evidenced by the surprising results which some of them achieve. In fact, such a close approach to natural conditions combined with commercial practicability has been attained that the "settin' hen" has been almost crowded out of business even among the smaller poultry raisers, while among the larger farms artificial incubation has reached huge proportions and is used exclusively.

To meet these demands many different machines are offered, each claiming peculiar merit. Among these the Ormas Incubator, manufactured by Mr. L. A. Banta, of Ligonier, Ind., occupies a prominent place. His incubator is the product of careful thought and attention to those details so necessary in making a hatcher of the highest quality, and his machine is worth the consideration of any one contemplating the purchase of an incubator. The Ormas line, which includes brooders also, are models of scientific efficiency and judging from the testimony of those who use them, give good satisfaction.

Mr. Banta sends a beautifully illustrated catalogue, containing full description and prices, free to all who request the same. Address **L. A. Banta, Ligonier, Ind.**

H. H. & E. M. Coburn, of Memphis, Mich., announce a removal sale of their Silver Penciled and Columbian Wyandottes. All their surplus Silver Penciled Wyandotte stock must be closed out at a sacrifice before March 15th. They are prepared to furnish eggs from their best matings of both Silver Penciled and Columbian Wyandottes. These pens are headed by noted prize winners of the Columbians, especially by their 3rd prize World's Fair and 1st prize Detroit cockerel mated to 1st prize Detroit pullet and 1st prize Detroit hen.

They would be glad to send any reader of AMERICAN POULTRY JOURNAL their circular free.

Chas. H. Ward, Bethel, Conn., won as follows on his White Plymouth Rocks at the Hartford, Conn., show: 1st and special on cock; 2nd hen; 4th and special on cockerel; 5th on pullet, in a class of 108.

F. A. Crowell, Granger, Minn., breeder of Single Comb Buff Orpingtons, won as follows at Cresco, Iowa: 2nd cock; 1st cockerel; 1st and 2nd hen; 1st pen.

The yards of G. W. Brown, Camden, Ark., are now all mated and they believe beyond any doubt that they have in these yards more noted prize birds than anyone in all the South, and they can supply eggs from the very cream of these matings.

A TELEPHONE ON THE FARM.

Why not? Why shouldn't the farmer and his family enjoy the convenience of this modern time-saver? Why shouldn't the farm home be brightened in every way possible?

The great problem of keeping girls and boys contented on the farm would be solved in short order if farm life had more of the luxuries and conveniences of city life, if a large share of the monotony and isolation of farm life were dispelled.

The farmer himself would be greatly benefited by the adoption of some of the more necessary modern improvements his city brother employs in his home and busi-

ness. For instance, the telephone. Every farm should have a telephone. For if any business man in the wide world needs a telephone the farmer is that man. With telephone the farmer, no matter how remote his location from the great centers of business, comes into close contact with the out-

side world. He may get the market reports every day and can sell his products when the market is right. Thus the extra price he may realize from a single crop will often pay the entire cost of his telephone and the expense of building his line. A telephone keeps the farmer in touch with his

neighbors, gets help to him without delay or loss of time when help is needed or accidents occur; calls the doctor quickly when emergencies arise, day or night; often saves a trip to town in busy seasons when time is money, and cements the entire neighborhood into one big, helpful family.

Farmers are awakening to the numerous advantages of owning their own telephones and lines. Hundreds of farm lines are be-

ing built all over the country. The improved telephone and appliances built especially for farm lines by the Stromberg-Carlson Tel. Mfg. Co., of Rochester, N. Y., makes the building and operating of such lines a very simple and inexpensive proposition. No better instruments and apparatus are built, and the testimonials of hundreds of users prove that the success of their lines is due to the superiority of Stromberg-Carlson telephones. They are simple, do not get out of order or require experts to operate them. They are built for durability and efficiency.

The Stromberg-Carlson Company will be glad to hear from farmers everywhere who are interested in knowing more about telephones and how to build and operate farm lines. They have a lot of valuable information which they will be glad to send free to farmers. Write for it.

ATTRACTIVE AND BEAUTIFUL FARMS

The farm garden that is well stocked with berries, bushes and vines, with roses and all sorts of small fruits is a thing of beauty and a source of pleasure and profit. The orchard filled with fruit trees and the lawn bordered with shade and ornamental trees, shrubs, etc., mark the home of the wise, widespread, progressive farmer.

The Gage County Nurseries, of Beatrice, Neb., right in the heart of the belt of where healthy trees are grown, has been in business for over twenty-four years, helping all that time to make the farm a better place to live, more attractive, more home-like, more profitable and more healthful. The beautiful homes it has helped to make dot the western prairies and eastern hills.

The Gage County Nurseries claim it costs more to sell a tree through an agent than it does to grow it. Consequently it sells direct to the customer at only a fair profit on what it costs to grow the stock. Send for catalogue before you buy, listing everything in the nursery line, describing the improved facilities of its complete nursery plant and telling why it can serve you to your entire satisfaction.

GREAT WINNINGS.

The Rock River Poultry Company, breeder of Rose Comb White Leghorns (F. J. Phillips, manager), 5929 Superior street (telephone Austin 3023), city office 607 Lakeside building, corner Clark and Adams streets, won the following prizes at World's Fair, St. Louis, in hot competition: Five firsts, four seconds, one third, three fourths (thirteen entries), \$50 and Leghorn Club silver cup and \$25 silver cup for best cock, cockerel, hen and pullet at Madison Square, New York, 1905; eight entries, eight prizes at Chicago, December, 1904; five firsts, four seconds, two thirds, three fourths, entries fifteen birds, also silver cup, at the great Chicago show, January, 1905. All prizes except three won by the Phillips' strain. All lovers of high-grade R. C. W. L. should send for a catalogue, which is sent free if you mention AMERICAN POULTRY JOURNAL.

B. G. Westfall, of Oak Grove, Mich., won as follows on his Barred Plymouth Rocks: Lansing, Mich., Dec. 26 to 30, '04, Hewes, judge, 71 Barred Rocks in class, 1st, 2nd cock; 1st, 3rd hen; 1st cockerel; 3rd pullet and 1st pen. Ann Arbor, Mich., Jan. 18 to 21, '05, Tucker, judge, 166 in class, 3rd cock; 1st hen; 4th pullet and 2nd pen. Pontiac, Mich., Jan. 31 to Feb. 4, '05, Bloss, judge, 45 in class, 1st cock; 1st, 2nd, 3rd hen; 1st, 3rd, 4th cockerel; 1st, 2nd, 4th pullet; 1st pen and all specials, including a fine cheese given by Gov. Fred M. Warner for five highest scoring Barred Rocks in class, score 183 44-100.

Ira C. Keller, of Prospect, Ohio, won at the Madison Square Garden New York Show in January, 1905, on Golden Wyandottes, 2nd, 3rd cock; 1st hen; 1st cockerel; 2nd pullet; 1st breeding yard.

He has a large number of very fine Golden and White Wyandottes to spare yet, and a few very fine Sebrights and Belgian hares. The quality is very high and the prices low, considering the grade of stock.

YOU MUST READ this in Yourself

you to select from. You see their advertisements, read their catalogues and finish up by being all at sea as to which one to choose. You want the best, of course. You want an incubator that with the least personal trouble will hatch the greatest percentage of fertile eggs—not only once but every time. That's why we say "You Must Read this in justice to yourself."

CHATHAM INCUBATORS and Brooders

not only hatch the greatest percentage of fertile eggs every time, but do so with the least care; no setting up nights to worry. The Regulation is perfect. The ventilation and moisture are attended to automatically. We supply all our incubators with our patent steel and brass regulator. No other make is allowed to use this. It is ours, exclusively—Yours free when you buy our incubators. Then OUR OWN PATENT EGG TURNER is another feature you would not do without if you knew what we know about it. It turns eggs instantly without danger of breaking any—not one broken egg a year. Think of that. Then the way we make our Chatham incubators is an insurance that they will remain durable and in perfect working order without warping or coming apart, for a life time. We select the choicest Canada timber, kiln dry it, season it thoroughly, build two walls of this select, seasoned timber, one about the other, with mineral wool between, to make the body of each Chatham incubator, and fasten them all together with metal screws—not nails or wooden pegs. The finish is in hard oils leaving a beautiful grain in the wood. A Machine built for a purpose—one to be proud of.

We were the Very First to sell incubators On Time. We are still the only ones to prepay all freight to your station. When we say we sell on time we do not mean on a month's time only, nor two months—but a good long time. Take until Oct. 1 if you want.

When you write us for a Free Descriptive Catalogue with large illustrations and all the facts, we will tell you fully about our plan to enable you to pay for the incubator out of its own profits. It will please you, as it has thousands.

The Chatham Incubator makes a fine Christmas Present.

Don't hesitate to write us for catalogue and terms of sale On Time now, even if you don't wish to buy at once. We will ship your orders from the nearest point where we have branch houses, so there will be no delay in supplying you quickly. Correspondence regarding On Time sales should be addressed to the factory as follows:
